## PREFACE

The present report is on Annual Survey of Industries (ASI) 2017-2018 of the Govt. of NCT of Delhi, thirty seventh in the series, being issued by the Directorate of Economics \& Statistics, based on statistical returns furnished by the factories registered under Sections 2 m (i) \& 2 m (ii) of the Factories Act, 1948.

It is for the Seventh time when DES, Delhi participated in the field work of ASI 2017-18 on residual sample units. The report has been prepared by pooling unit level data provided by NSO (IS Wing), Govt. of India, having Census \& Sample sector units and unit level data of 344 residual sample units surveyed by this Directorate. District level estimates for important characteristics have also been presented in the report for the sixth time.

The report provides a comprehensive data on characteristics of the industrial activity. The report also contains important characteristics relating to capital structure, capital formation, employment pattern, input, output, value added by manufacture etc. It also highlights the distribution of principal characteristics by the employment size, capital size and type of ownership/organization and by size of capital. The report consists of two parts. The Part-I contains introduction, concepts and definitions and brief analysis of the industrial structure in the National Capital Territory, while Part-II is devoted to statistical tables.

The report has been prepared by Annual Survey of Industries Unit of the Directorate of Economics \& Statistics under the guidance of Sh. C.K.Dutta, Joint Director and Sh. K.R.Chhibber, Assistant Director. The report has been prepared by Sh. Parveen Chawla, Statistical Officer, with the assistance of staff of ASI branch, Ms. Binni Choudhary, Sh. Sachin Kumar, Sh. Pardeep Kumar, Sh. Pardeep Kumar Yadav, Sh. Rohini Pokhrel and Ms. Rekha Sharma Statistical Assistants.

Data processing and tabulation work has been done in the EDP unit under guidance of Sh. Praveen Srivastava \& Sh. Amit Verma, System Analysts. The strenuous efforts made by the officers and staff of ASI unit and EDP unit of this Directorate are highly appreciated.

## CHAPTER - I

## INTRODUCTION

The Annual Survey of Industries (ASI) is the principal source of industrial statistics in Delhi. It provides statistical information to assess and evaluate objectively and realistically the change in the growth, composition and structure of the organised manufacturing (Factory Sector), comprising activities associated with manufacturing processes, repair services, personal services, sanitary services, generation and transmission of electricity, gas, water supply and cold storages. Industrial sector occupies an important position in Delhi's economy and plays a pivotal role in the rapid and planned economic development.

Up to ASI 2010-11 the Annual Survey of Industries has so far been conducted annually under the statutory provisions of the collection of Statistical Act, 1953 and the rules framed there under in 1959. However, from ASI 2010-11 onwards, the survey is being conducted annually under the statutory provisions of the Collection of Statistics (COS) Act, 2008 and rules framed there-under in 2011. Upto ASI year 2010-11 the work of collection of Industrial Statistics from the organised industrial sector (Factory -Sector) has been entrusted to the Field Operations Division (FOD) of the National Sample Survey Organisation (NSSO), Government of India. Under the arrangement, provision has been made for the supply of unit level data of ASI by the CSO (IS Wing), Kolkata to the Directorate of Economics \& Statistics for use of State Government.

It is for the Seventh time when DES, Delhi participated in the field work of ASI 2017-18 on residual sample units. The report has been prepared by pooling unit level data provided by CSO (IS Wing), Govt. of India, having Census \& Sample sector units and unit level data of 344 residual sample units surveyed by this Directorate.

## COVERAGE

2. Coverage of the Annual Survey of Industries extends to the entire Factory Sector, comprising industrial units (called factories) registered under section $2(\mathrm{~m})(\mathrm{i})$ and 2(m)(ii)of the Factories Act.1948, wherein a "Factory", which is the primary statistical unit of enumeration for the ASI is defined as:-
"Any premises" including the precincts thereof:-
(i) wherein ten or more workers are working or were working on any day of the preceding Twelve months, and in any part of which a manufacturing process is being carried on with the aid of power or is ordinarily so carried on,
or
(ii) wherein twenty or more workers are working or were working on any day of the preceding twelve months, and in any part of which a manufacturing process is being carried on without the aid of power or is ordinarily so carried on, but does not include a mine subject to the operation of the Mines Act, 1952, or a railway running shed.

The "manufacturing process" referred to above has been defined under section $2(\mathrm{k})$ of the Factories Act, 1948 as:-
"Any process" for-
(i) making, altering, ornamenting, finishing, packing, oiling, washing, cleaning, breaking up, demolishing or otherwise treating or adapting any article or substance with a view to its use, sale, transport, delivery or disposal; or
(ii) Pumping oil, water or sewage; or
(iii) Generating, transforming or transmitting power; or
(iv) Composing types for printing by letter press, lithography, photogravure or other similar process or book binding; or
(v) Constructing, reconstructing, repairing, refitting, finishing or breaking up ships or vessels;

In addition to section $2(\mathrm{~m})$ (i) \& 2(m) (ii) of the Factories Act, 1948, electricity units registered with the Central Electricity Authority and Bidi \& Cigar units, employing 10 or more workers with the aid of power and 20 or more workers without the aid of power and registered under the Bidi \& Cigar Workers (Conditions of Employment) Act, 1966 are also covered in ASI.

## Unit of Enumeration

The primary unit of enumeration in the survey is a factory in the case of manufacturing industries, a workshop in the case of repair services, an undertaking or a licensee in the case of electricity, gas and water supply. The owner of two or more establishments located in the same state and pertaining to the same industry group and belonging to same scheme (census or sample) is, however, permitted to furnish a single consolidated return, termed as 'Joint Return'. Such consolidated returns are a common feature in the case of bidi and cigar establishments, electricity and certain public sector undertakings.

## ASI Frame

The ASI frame is based on the lists of registered factories/units maintained by the Chief Inspector of Factories in each state and those maintained by registration authorities in respect of bidi and cigar establishments and electricity under-takings. The frame is being revised once in three years from 1989-90 but updated every year by the regional offices of the Field Operations Division of NSSO in consultation with the Chief Inspector of Factories in the state. At the time of revision, the names of the de-registered factories are removed from the ASI frame and those of the newly registered factories are added. In updation, only new registrations are added to the existing frame. Inspite of regular updating of the frame, quite a number of small-sized factories selected for the survey are found to be non-existing in the field and are termed as deleted factories. However, such factories are not taken into consideration for the purpose of tabulation and analysis in this report.

All the factories in the frame have been classified into two sectors, viz., the census sector and the sample sector.

The Census Sector consists of the following categories:
(i) Units having 50 or more workers and
(ii) All factories covered under Joint return and contributing significantly in terms of GVA.
(iii) After excluding the census sector units as defined above, all units belonging to the strata(state by 4-digit NIC-2008) having less than or equal to 4 units are also considered as census sector units.

The Sample sector: All industrial units of the entire ASI frame minus the Industrial units of the Census Sector will form the sample sector.

Since ASI 1999-2000, all electricity undertakings other than captive units have been kept outside the purview of ASI. All departmental undertakings such as Railway workshop etc. have also been kept outside the preview of ASI.

## Sampling Design and Sample Allocation

A new sampling design has been adopted since ASI 2013-14 following the recommendation of Dr. S. L. Shetty Committee and approved by the SCIS subsequently in its 23rd meeting. According to the new sampling design, ASI sample comprises two parts - Central Sample and State Sample. The Central Sample consists of two schemes: Census and Sample. Under Census scheme, all the units are surveyed.

## (a) Census scheme:

(i) All industrial units belonging to the six less industrially developed states/ UT's viz.Manipur, Meghalaya, Nagaland, Sikkim, Tripura and Andaman \& Nicobar Islands.
(ii) For the rest of the states (i) units having 100 or more employees (in case of Delhi, units having 50 or more employees) and (ii) all factories covered under Joint Returns.
(iii) After excluding the Census scheme units, as defined above, all units belonging to the strata (State x District x Sector x 4 digit NIC-2008) having less than or equal to 4 units are also considered under Census Scheme. It may be noted that in the formation of stratum, the sectors are considered as Bidi, Manufacturing and Electricity.
(b) All the remaining units in the frame are considered under Sample Scheme. For all the states, each stratum is formed on the basis of State x District x Sector x 4-digit NIC-2008. Theunits are arranged in descending order of their number of employees. Samples are drawn as per Circular Systematic Sampling technique for this scheme. An even number of units with a minimum of 4 units are selected and distributed in four sub-samples. It may be noted that each of 4 sub-samples from a particular stratum may not have equal number of units.
(c) Out of these 4 sub-samples, two pre-assigned sub-samples are given to NSSO (FOD) and the other two-subsamples are given to State/UT for data collection.
(d) The entire census units plus all the units belonging to the two sub-samples given to NSSO
(FOD) are treated as the Central Sample.
(e) The entire census units plus all the units belonging to the two sub-samples given to State/UT are treated as the State Sample.
(f) The entire census units plus all the units belonging to the two sub-samples given to NSSO (FOD) (Census \& Sample) plus all the units belonging to the two sub-samples given to State/UT(State sample) are taken together to get the pooled estimates of state as a whole and its constituent districts.

## 4. Estimation Procedure

### 4.1 Notations:

$i=$ subscript for i-th state.
$\mathrm{s}=$ subscript for s -thstratum in the i-th state.
$\mathrm{m}=$ subscript for sub-sample $(\mathrm{m}=1,2,3,4)$ [ $\mathrm{m}=1$ and 3 for central and 2 and 4 for state].
$\mathrm{k}=$ subscript for $\mathrm{k}-\mathrm{th}$ sample enterprise under a particular stratum.
$E=$ total number of factory in the sample sector in a stratum.
$e=$ number of factories surveyed out of total number of factory in the sample sector in a stratum.
$\mathrm{x}, \mathrm{y}=$ observed value of characteristics $\mathrm{x}, \mathrm{y}$ under estimation.
$\hat{X}, \hat{Y}=$ estimate of population total $\mathrm{X}, \mathrm{Y}$ for the characteristics $\mathrm{x}, \mathrm{y}$.
Under the above symbols,
$\mathrm{Y}_{\text {ismk }}=$ observed value of the characteristic y for the k -th enterprise belonging to the m -th sub-sample for the s-th stratum in the i-th state.
(a) Formulae for estimation of aggregates for a state based on central sample:

Estimation formula for any characteristics of the enterprise for the sample sector of the i-th state is:

$$
\begin{array}{r}
{ }^{\mathrm{c}} \widehat{Y}_{i}^{\prime}=\sum_{s=1}\left[\frac{E_{i s}}{\sum_{m=1,3} e_{i s m}}\left[\sum_{k=1}^{e_{i s 1}} y_{i s 1 k}+\sum_{k=1}^{e_{i s 3}} y_{i s 3 k}\right]\right] \\
=\sum_{s=1}\left[\widehat{Y}_{i s 1}+\widehat{Y}_{i s 3}\right]
\end{array}
$$

$$
\begin{equation*}
=\sum_{s=1} \sum_{m=1,3} \widehat{Y}_{i s m} \tag{1}
\end{equation*}
$$

Where superscript ' C ' in ${ }{ }^{\prime} \hat{Y}_{i}^{\prime}$ stands for central sample.

The formula for corresponding sub-sample wise estimates for the sample sector of the i-th state is:

$$
\begin{equation*}
{ }^{\mathrm{C}} \hat{Y}_{i m}^{\prime}=\sum_{s=1}\left[\frac{E_{i s}}{e_{i s m}} \sum_{k=1}^{e_{i s m}} y_{i s m k}\right], \mathrm{m}=1,3 . \tag{1.1}
\end{equation*}
$$

If $\hat{Y}_{i}^{\prime \prime}$ be the corresponding estimate for that characteristic of the enterprise for the census sector of the i-th state, then the estimate for that characteristic of the enterprise for the i-th state as a whole is given by:

$$
\begin{equation*}
{ }^{\mathrm{C}} \hat{Y}_{i}=\hat{Y}_{i}^{\prime}+\widehat{Y}_{i}{ }^{\prime \prime} \tag{2}
\end{equation*}
$$

The estimate of the characteristic of the enterprise for all-India will be:

$$
\begin{equation*}
{ }^{\mathrm{C}} \hat{Y}=\sum_{i} \quad{ }^{\mathrm{C}} \hat{Y}_{i_{-}} . \tag{3}
\end{equation*}
$$

(b) Formulae for estimation of aggregates for a state based on state sample:

Estimation formula for any characteristics of the enterprise for the sample sector of the i-th state based on State sample is:

$$
\begin{align*}
& { }^{s} \hat{Y}_{i}^{\prime}=\sum_{s=1}\left[\frac{E_{i s}}{\sum_{m=2,4} e_{i s m}}\left[\sum_{k=1}^{e_{i s 2} 2} y_{i s 2 k}+\sum_{k=1}^{e_{i s 4}} y_{i s 4 k}\right]\right] \\
& =\sum_{s=1}\left[\hat{Y}_{i s 2}+\hat{Y}_{i s 4}\right] \\
& =\sum_{s=1} \sum_{m=2,4} \hat{Y}_{i S m} \ldots \ldots \ldots \ldots \ldots \ldots \ldots \text { (4) } \tag{4}
\end{align*}
$$

Where superscript ' $S$ ' in ' $\widehat{Y}_{i}$ ' stands for central sample.
The formula for sub-sample wise estimates for the sample sector of the i-th state based on state sample is :

$$
\begin{equation*}
{ }^{\mathrm{S}} \hat{Y}_{i m}^{\prime}=\sum_{s=1}\left[\frac{E_{i s}}{e_{i s m}} \sum_{k=1}^{e_{i s m}} y_{i s m k}\right], \mathrm{m}=2,4 . \tag{4.1}
\end{equation*}
$$

Using $\widehat{Y}_{i}^{\prime \prime}$ as the corresponding estimate for that characteristic of the enterprise for the census sector of the i-th state, then the estimate for that characteristic of the enterprise for the i-th state as a whole based on the state sample is given by:
${ }^{\mathrm{s}} \widehat{Y}_{i}=\widehat{Y}_{i}^{\prime}+\widehat{Y}_{i}^{\prime \prime}$

## ( c) Formulae for estimation of aggregates for a state based on pooled sample:

Estimation formula for any characteristics of the enterprise for the sample sector of the i-th state based on pooled sample (i.e. central and state combined) is:

$$
\begin{equation*}
{ }^{\mathrm{p}} \hat{Y}_{i}^{\prime}=\sum_{s=1}\left[\frac{E_{i s}}{\sum_{m=1}^{4} e_{i s m}}\left[\sum_{m=1}^{4} \sum_{k=1}^{e_{i s m}} y_{i s m k}\right]\right] \tag{6}
\end{equation*}
$$

Using $\hat{Y}_{i}^{\prime \prime}$ as the corresponding estimate for that characteristic of the enterprise for the census sector of the i-th state, then the estimate for that characteristic of the enterprise for the i-th state as a whole based on the pooled sample is given by:

$$
\begin{equation*}
{ }^{\mathrm{p}} \widehat{Y}_{i}=\widehat{Y}_{i}^{\prime}+\widehat{Y}_{i}^{\prime \prime} \tag{7}
\end{equation*}
$$

4.2 EstimatesofErrorforAggregate $\widehat{\boldsymbol{Y}}$ : The variance is to be obtained for the sample sector units only. The estimated variances of the estimates at state level will be as follows:
$\operatorname{Var}\left(\hat{Y}_{i}\right)=\sum_{s} \operatorname{Var}\left(\hat{Y}_{i s}\right)$
The sampling variance based on central Samples is :

$$
\begin{equation*}
\operatorname{Var}\left(\hat{Y}_{i}\right)=\sum_{s}\left\{\left(\hat{Y}_{i s}-\hat{Y}_{i s}\right) / 2\right\}^{2} . . \tag{9.1}
\end{equation*}
$$

The sampling variance based on state Samples is :

$$
\begin{equation*}
\operatorname{Vâ}\left(\hat{Y}_{i}\right)=\sum_{s}\left\{\left(\hat{Y}_{i s 2}-\hat{Y}_{i s 4}\right) / 2\right\}^{2} . \tag{9.}
\end{equation*}
$$

For generating estimates of variance for the pooled sample is:

$$
\begin{equation*}
\operatorname{Var}\left(\hat{Y}_{i}\right)=\frac{1}{12} \sum_{s} \sum_{m=1}^{4}\left(\hat{Y}_{i s m}-\hat{Y}_{i s}\right)^{2} \text {, Where } \hat{Y}_{i s}=\frac{1}{4} \sum_{m=1}^{4} \hat{Y}_{i s m} \tag{9.3}
\end{equation*}
$$

For all-India, the estimated variances of the estimates will be as follows:

$$
\begin{equation*}
\operatorname{Var}(\hat{Y})=\sum_{i} \operatorname{Var}\left(\hat{Y}_{i}\right) \tag{10}
\end{equation*}
$$

### 4.3 Estimates of RSE:

$$
\begin{equation*}
R \hat{S} E(\hat{Y})=\frac{\sqrt{V \hat{V} r(\hat{Y})}}{\hat{Y}} \times 100 \tag{11}
\end{equation*}
$$

## Multipliers for enterprises:

| Formula for sub-sample wise multiplier | Formula for combined sample multiplier |
| :--- | :--- |
| $\frac{E_{i s}}{e_{i s m}}, \mathrm{~m}=1,2,3$ or 4 | $\frac{E_{i s}}{e_{i s}}, e_{i s}=\sum_{m=1}^{4} e_{i s m}$ |
|  |  |

## Reference Period

Reference period for ASI 2017-2018 was the accounting year of the factory, ending on any day during the financial year 2017-2018. Thus in ASI 2017-2018 data collected from respective establishment relate to their accounting year ended on any day between $1^{\text {st }}$ April, 2017 and $31^{\text {st }}$ March, 2018. Survey was conducted in the year May, 2019 to December, 2019.

## Schedule of Enquiry

The schedule for ASI 2017-2018 is more or less similar to the ASI schedule 2016-2017, and it aims to collect data on assets and liabilities, employment and labour cost, receipts, expenses, input items - indigenous and imported, products and by-products, distributive expenses etc.

## CLASSIFICATION OF INDUSTRIES

The NIC - 1970 was followed to classify economic activities of the factories from ASI 1973-74 to ASI 1988-89. NIC - 1987 had been introduced and followed till ASI 1997-98. NIC 1998 was then followed from ASI 1998-99 to ASI 2003-04, NIC - 2004 introduced from ASI 2004-05 was followed till ASI 2007-2008. New series of classification i.e. NIC-2008 has been
introduced from ASI 2008-09. All the factories in the ASI frame are accordingly classified in their appropriate industry groups on the basis of the value of the principal product manufactured by them. This way a unit gets classified in one and only one industry group even though it might be manufacturing products belonging to different industries. The estimates for different aggregates presented at two or three digit level in this report correspond to the NIC 2008.

## LIMITATION

All the estimated value figures given in this publication are reported in current prices. The value figures are generally rounded off to lakhs of rupees. All figures are rounded off separately and thus, may not exactly tally with the sum of districts. Similarly, all-Industry figures may not tally with the sum of individual industry figures. Also the industry-wise totals at lower level may not tally with the next higher level due to necessary merging at different levels.

The Collection of Statistics Act prohibits disclosure of data relating to individual factories. Therefore, if the number of factories under any industry ( 2 digit \& 3-digit level of NIC-2008) in the state is less than three, the data have been combined to a similar industry, or clubbed in a common industry others in order to conceal the identity of all such units belonging to the concerned stratum.

All the estimates, especially for quantity and value figures for any particular item consumed and produced, are subject to Statistical Error as these are estimated on the basis of a selected sample.

As per tabulation policy it has been decided to publish the detailed information corresponding to industry codes $10-33,38,45,52,58,82,95$ and 96 following NIC-2008. For all other industry codes the units have been clubbed and shown under a common industry 'Other' in different tables.

## CHAPTER - II

## CONCEPTS AND DEFINITIONS

REGISTERED FACTORY is one which is registered under sections 2 m (i) and 2 m (ii) of the Factories Act, 1948. The Sections 2 m (i) and 2m (ii) refer to any premises including the precincts thereof (a) wherein ten or more workers are working, or were working on any day of the preceding twelve months, and in any part of which a manufacturing process is being carried on with the aid of power, or is ordinarily so carried on or (b) wherein twenty or more workers are working or were working on any day of the preceding twelve months and in any part of which a manufacturing process is being carried on without the aid of power, or is ordinarily so carried on.

FIXED CAPITAL represents the depreciated value of fixed assets owned by the factory as onthe closing day of the accounting year. Fixed assets are those which have a normal productive life of more than one year. Fixed capital includes land including leasehold land, buildings, plant and machinery, furniture and fixtures, transport equipment, water system and roadways and other fixed assets such as hospitals, schools etc. used for benefit of factory personnel.

PHYSICAL WORKING CAPITAL is the total inventories comprising of raw materials and components, fuels and lubricants, spares, stores, semi-finished goods and finished goods as on the closing day of the accounting year. However, it does not include the stock of the materials, fuels, stores etc. supplied by others to the factory for processing and finished goods processed by the factory from raw materials supplied by others.

INVESTED CAPITAL is the total of fixed capital and physical working capital.

WORKING CAPITAL is the sum of the physical working capital as already defined aboveand the cash deposits in hand and at bank and the net balance receivable over amounts payable atthe end of the accounting year. Working capital, however, excludes unused overdraft facility, fixed deposits irrespective of duration, advances for acquisition of fixed assets, loans and advances by proprietors and partners irrespective of their purpose and duration, long-term loans including interest thereon and investments.

PRODUCTIVE CAPITAL is the total of fixed capital and working capital as defined above.

GROSS VALUE OF PLANT OF MACHINERY represents the total original (undepreciated)value of installed plant and machinery at the end of the accounting year. It includes the book value of the newly installed plants and machinery and the approximate value of rented in plants and machinery at the time of renting- in but exclude the value of rented- out plants and machinery. Total value of all the plants and machinery acquired on hire - purchase basis is also included.

WORKERS are defined to include all persons employed directly or through any agency whether for wages or not and engaged in any manufacturing process or in cleaning any part of the machinery or premises used for manufacturing process or in any other kind of work incidental to or connected with the manufacturing process or the subject of the manufacturing process. Labour engaged, in the repair and maintenance or production of fixed assets for factory's own use or labour employed for generating electricity or producing coal, gas etc. are included.

EMPLOYEES include all workers defined above and persons receiving wages and holding supervisory or managerial positions engaged in administrative office, store keeping section and welfare section, sales department as also those engaged in purchase of raw materials etc. or purchase of fixed assets for the factory and watch and ward staff.

MAN-HOURS represent the total number of hours worked and the number of hours paid for, during the accounting year. It is obtained by summing-up the number of persons of specified categories attending in each shift-hour over all the shifts worked on all days.

WAGES AND SALARIES are defined to include all remuneration in monetary terms and also payable more or less regularly in each pay period to workers as compensation for work done during the accounting year. It includes (a) direct wages and salary (i.e., basic wages/salaries, payment of overtime, dearness, compensatory, house rent and other allowances) ; (b) remuneration for the period not worked (i.e., basic wages, salaries and allowances payable for leave period, paid holiday, lay off payments and compensation for unemployment, if not paid from sources other than employers) ; (c) bonus and ex-gratia payment paid both at regular and less frequent intervals ( i.e., incentive bonuses, good attendance bonuses, productive bonuses, profit sharing bonuses, festival or year-end bonuses etc.). It excludes lay off payments, which are made (1) from trust or other special funds set up exclusively for this purpose i.e. payment not made by the employer. It also excludes imputed value of benefits. (2) In kind, Employer's contribution to old age benefits and other Group benefits. Travelling and other expenditure incurred for business
purposes and reimbursed by the employer are excluded. The wages are expressed in terms of gross value i.e., before deduction for fines, damages, taxes, provident fund, employee's state insurance contribution etc.

TOTAL EMOLUMENTS is defined as the sum of wages and salaries, employer's contributions provident fund and other funds and workmen and staff welfare expenses as defined above.

FUELS CONSUMED represent total purchase value of all items of fuels such as coal. Liquefied petroleum gas, petrol, electricity, lubricants, water etc. consumed by the factory during the accounting year but excluding the items which directly enter into the manufacturing process.

MATERIALS CONSUMED represents the total delivered value of all items of raw materials, components, chemicals, packing materials and stores which actually enter into the production process of the factory during the accounting year. It also includes the cost of all materials used for the construction of building etc. for the factory's own use. It, however, excludes all intermediate products consumed during the accounting year. Intermediate products are those products, which are produced by the factory but are subject to further manufacturing.

TOTAL INPUT comprises total value of fuels, materials consumed as well as expenditure such as cost of contract and commission work done by others on materials supplied by the factory, cost of materials consumed for repair and maintenance of factory's fixed assets including cost of repairs and maintenance work done by others to the factory's fixed assets, inward freight and transport charges, rate and taxes (excluding income tax), postage, telephone and telex expenses, insurance charges, banking charges, cost of printing and stationery and purchase value of goods sold in the same condition as purchased.

EX-FACTORY VALUE of all products and by-products manufactured is attained at the rate of net sale-value which is obtained by deducting sale-tax, excise duties and other distributive expenses from actual sale value (inclusive of subsidies etc.) with respect to each of the items.

TOTAL OUTPUT comprises total ex-factory value of products and by-products manufactured as well as other receipts such as receipts from non-industrial services rendered to others, work done for others on material supplied by them, value of electricity produced and sold, sale value of goods sold in the same condition as purchased, addition in stock of semi-finished goods and own construction.

DEPRECIATION is consumption of fixed capital due to wear and tear and obsolescence during
the accounting year and is taken as provided by the factory owner or is estimated on the basis of cost of installation and working life of the fixed assets.

SEMI-FINISHED GOODS refer to the imputed value of all materials which have been partially processed by the factory but which are not usually sold without further processing. It includes the work in progress for materials supplied by others, but excludes the value of semifinished fixed assets produced for factory's own use.

NET VALUE ADDED is arrived by deducting total input and depreciation from total output.

## CONCENTRATION OF FACTORIES

The summary results (Table II of the Annexure) revealed that during the reference period of ASI 2017-2018, the most of factories were engaged in Manufacture of Fabricated Metals Products except Machinery (NIC-25) (10.72\%) followed by, Manufacture of Wearing apparel (NIC-14) (9.96\%) Wholesale \& Retail Trade \& Repair of Motor Vehicles (NIC-45) (8.76\%), Printing \& Reproduction of Recorded Media (NIC-18) (8.01\%), Manufacture of electrical equipment (NIC-27) (8.00\%) and Manufacture of leather and related products (NIC-15) (6.53\%). These six industries together have constituted $51.97 \%$ of the total working factories, provided employment to $51.99 \%$ of the total employees and utilized 37.72 percent of fixed capital stock. Their share in the gross value of output and net value added by manufacture were 43.19 and 43.69 percent respectively.

During ASI 2017-18 there was a decrease of $6.82 \%$ in the number of working factories. Outstanding loans, total input, Invested Capital and Fixed Capital were also decreased by $27.95 \%$, $31.43 \%, 26.09 \%$ and $4.92 \%$ respectively. Also, Total Emoluments increased during current year (2017-18) from previous year by $0.47 \%$, whereas number of workers decreased by $6.33 \%$ during the same period. At the same time GVA and Net Income have increased by $0.67 \%$ and $10.24 \%$ respectively during the ASI 2017-18. The major increase in GVA was observed in the Industry group, Manufacture of textiles (NIC-13) 90.64\%, Manufacture of motor vehicles, trailers and semi-trailers (NIC-29) 86.80 \%, Manufacture of chemicals and chemical products (NIC-20) $75.05 \%$, Manufacture of computer, electronic and optical products (NIC-26) 44.09\% and Publishing activities (NIC-58) 42.01\%.

|  |  | 100.00\% | 100.00\% | 100.00\% |

The study of the table-2 reveals that:
(i) Factories under the group 'Non-Government Company--Private' numbering 999 ( $40.63 \%$ ) were the highest in the factory sector, followed by 'Individual Proprietorship' 757 units ( $30.80 \%$ ), and Partnership 636 ( $25.88 \%$ ).
(ii) In the Census Sector,'Non-Government Company-Private' 539 (53.37\%), Partnership $240(23.76 \%)$ and Individual Proprietorship 188 ( $18.61 \%$ ) were the top three in respect of number of enterprises.
(iii) The pattern in the Sample sector, however was slightly different i.e. Individual Proprietorship 569 ( $39.29 \%$ ) occupied the top position, followed by Non-Government Company- Private 460 (31.75\%) and Partnership 396 (27.35\%).

## (b) Year of Initial Production

The distribution of factories classified according to their year of initial production has been presented in the table as follows:-
TABLE-3: FACTORIES CLASSIFIED ACCORDING TO THEIR YEAR OF INITIAL PRODUCTION

It would be seen from the Table 3 that:-
(i) Out of total 2459 units covered, only 27 units ( $1.09 \%$ ) have started their production before 1951. The survey result reveals a continuous upward trend in the numbers of factories according to their year of initial production. Maximum numbers of factories are returned in the period 2001-2010 as 607 (24.66\%).
(ii) In the Census Sector, the maximum numbers of 280 units ( $27.72 \%$ ) were set up in the period 2001-10, while 225 units (22.28\%) during 1991-2000.
(iii) Similarly, in Sample Sector the maximum numbers of 327 units ( $22.53 \%$ ) were setup during the period 2001-2010 and 326 units (22.46\%) during 1981-1990.

## CAPITAL STRUCTURE

During the reference period 2017-18, the fixed capital invested in the factories covered under the survey was estimated at ₹ 6630 crore, Productive Capital ₹ 12172 crore and Invested Capital ₹ 13274 crore. Fixed Capital and Invested Capital have decreased by $4.92 \%$ and $26.09 \%$ and Productive Capital has decreased by $23.75 \%$ compared to those estimated during the corresponding period of 2016-17. From the investment angle, industries such as Waste collection, treatment and disposal activity (38), Mfg. Of Food Products (10), Mfg. Of wearing apparel (14), Wholesale and retail trade and repair of motor vehicles and motorcycles (45) and Printing and reproduction of recorded media (18) were the important ones. These industries among themselves shared 52.33 \% of fixed capital, $48.31 \%$ of invested capital and $26.17 \%$ of working capital deployed in all the industries taken together.

Table-4 given below depicts the relative share of the Census and Sample sector in the capital structure, as also certain important ratios, and derived ratios.

| Total |  | 2459 | 6630 | 13274 | 12172 | 0.5 | 0.54 | 5.40 | 4.95 |

## The study of the table reveals that:

The 1010 Census Sector Factories constituting 41.07 percent of factory sector deployed a major share of the capital resources of factory sector viz. ₹ 10432 crore or 78.59 percent of the total Invested Capital, ₹ 8697 crore or 71.45 percent of the total 'Productive Capital' and ₹5230 crore or 78.90 percent of the total 'Fixed Capital'.

The invested capital per unit' worked out to ₹ 10.33 crore in the Census sector and ₹ 1.96
crore in the Sample sector and ₹ 5.40 crore total in the factory sector as a whole. This indicates that employment potential, with limited resources is more in the small size units than in the large size units.

Details of 'Invested',' Productive' and 'Fixed Capital' their percentage distribution and certain important derived ratios at the Major Industry groups and Industry Groups at 2 digit level of National Industrial Classification (NIC-2008) have been shown in Table II given in Part II of the report.

## Table -II of the Annexure, Shows That:-

(i) Among the Industry Groups at 2 digit of NIC-2008, two major contributors in the invested capital were Industry NIC Group 10-Manufacturing of Food Products, NIC Group 20- Manufacturing of chemicals and chemical products with contributions of 2490.65 crore ( $18.76 \%$ ) and 1478.24 crore (11.14\%) respectively. Similarly, in the fixed capital in the factory sector were NIC Groups-38 Waste collection, treatment and disposal activities; materials recovery, NIC Group-10 manufacturing of Food products, with contributions of 1041.57 crore ( $15.71 \%$ ) and 814.41 crore (12.28).
(ii) The lowest contribution on the other hand was that of Major Industry NIC Group 96Other personal service activities, contributing 2.18 crore ( $0.02 \%$ ) in the Invested capital and contributing $0.03 \%$ in the fixed capital in the factory sector.
(iii) The Fixed capital to invested Capital ratio is worked out to 0.50 in the factory sector. The Ratio is the highest in major industry NIC Group 52- Ware housing \& support activities for transportation (1.00), and lowest in major industry NIC Group 20- Manufacture of chemicals and chemical products( 0.22 ).

As many as 414 units constituting 28.54 percent of total units in the Sample sector employed 50-99 workers each. Further, 288 units constituting 19.88 percent of the Sample sector reported employment 100 or more workers.

## EMOLUMENTS

A total sum of ₹ 2910.04 crore was paid as emoluments to all employees during 2017-18 of which₹ 1174.73 crore were paid as wages to workers and remaining ₹ 1735.31 crore represented payment to other employee's salary, bonus and value of benefits in kind etc. The share of Census and Sample sector factories in the case of the total emoluments to all employees was ₹2,308 crore ( $79.33 \%$ ) and ₹ 602 crore ( $20.67 \%$ ) respectively whereas in the case of wages to workers it was ₹918 crore (78.11\%) and ₹257 crore (21.89\%) respectively.

The above table reveals that the employees as well as workers in the Census sector were better paid than those in Sample sector. The Census sector constituted only 41.07 percent of the factory sector, claimed 79.33 percent of the emoluments paid to employees. The average emoluments per employee per man-day for the Census sector worked out to ₹ 949.99 as against ₹ 792.85 for the Sample sector and ₹ 912.59 for the factory sector as a whole. The reasons for the difference in the emoluments in the two sectors are obvious. The factories in the Census sector are generally highly mechanized and employ a greater percentage of skilled persons who are better paid than others.

The comparative position in respect of total emoluments paid to all employees, salaries and wages paid to workers etc, the major industry groups has been indicated in table II, given in PartII of the report. Some of the salient features revealed from the study of this table are:
(i) The total emoluments paid to all employees were the maximum at ₹ 48 , 757 lakh ( $16.75 \%$ ) in the Major Industry Group 10- Manufacturing of food products, followed by ₹47,074 lakh ( $16.18 \%$ ) in the Major Industry Group-14- Mfg. of Wearing apparel and ₹ 33,285 lakh (11.48\%) in Major Industry Group 45 Wholesale and Retail Trade and Repair of Motor Vehicles and Motorcycles, these three groups together shared around $44.37 \%$ of the total emoluments paid in the factory sector.
(ii) The average emoluments per employee per annum ₹ $4,19,940$ is the maximum in the Major Industry Group 82- Office admin, office support, while it is the lowest at ₹ $1,77,734$ in the Major Industry Group, 23-Mfg. of other non-metallic. However, the average emoluments per employee per year for the factory sector worked out to ₹ $2,76,762$.
(iii) The total wages of ₹ 21771 lakh ( $18.53 \%$ ) paid to the workers were the maximum in Major Industry Group 14-Manufacturing of Wearing Apparel and Industry Group-10 followed by ₹ 18464 lakh ( $15.72 \%$ ) in the Major Industry Group-10 Manufacturing of Food Products and ₹ 13,953 lakh ( $11.88 \%$ ) in the Major Industry Group-45 Wholesale and retail trade and repair of motor vehicles and motorcycles. The three groups together accounted for $46.13 \%$ of the total wages paid in the factory sector.

## INPUTS

Inputs, in any industrial activity mainly consists of consumption of raw materials and stores (used for manufacture, repair and maintenance purposes), 'fuels' materials consumed and also other inputs viz
(i) Cost of non-industrial services received from others
(ii) Cost of materials consumed for repair \& maintenance of factory's fixed assets including cost of work done by others to the factory's fixed assets
(iii) Cost of contract and commission work done by others on materials supplied by the factory
(iv) Cost of office supplies and products reported for sale during last year and used for further manufacture during the accounting year.

The total value of the inputs, other than labour input and depreciation in the factory sector
worked out to ₹ $39,847.73$ crore. Out of this, consumption of materials being the principal components accounted for ₹ $24,531.17$ ( $61.56 \%$ ) crore of the total value of input. The remaining $15,316.56$ crore were shared by 'fuels' and 'other inputs', their relevant values being ₹ 990.16 crore ( $2.48 \%$ ) and ₹ $14,326.40$ crore ( $35.95 \%$ ) respectively.

The table below indicates the percentage consumption of different components of inputs in the Census, Sample \& factory sectors.

The perusal of the table-9 reveals some of interesting facts which are as under:-
(i) The Census sector factories, constituting 41.07 percent of the total factories covered shared 70.88 percent of the total inputs, while the Sample sector, forming 58.93 percent of the factories accounted for only 29.12 percent of the total inputs.
(ii) The percentage share in the total consumption of 'materials', 'fuels' and 'other inputs' in the case of Census sector was 63.19 percent, 64.17 percent and 84.51 percent respectively. The simultaneous percentages in the case of Sample sector were 36.81 percent, 35.83 percent and 15.49 percent in that order.
(iii) Within the two sectors, the percentage share of the constituents of 'total inputs' varied considerably. In the Census sector 'material consumed', 'fuel consumed' and 'other inputs' accounted for 54.88 percent, 2.25 percent and 42.87 percent respectively compared to 77.82 percent, 3.06 percent and 19.12 percent respectively for the Sample sector as against 61.56 percent, 2.48 percent and 35.95 percent respectively for the factory sector as a whole.

Some of the salient features revealed by the study of the results of the survey detailed in table II given in part II of the report are as follows:-
(i) Major Industry Group 10 ' Mfg of Food products' shares 44.22 percent of the total inputs in the factory sector followed by Group 27- 'Manufacture of electrical equipment, Group 14 -'Manufacturing of Wearing Apparel', Group-20 'Manufacture of chemicals and chemical products', sharing $6.33 \%, 6.09 \%$, and $5.60 \%$ respectively of total inputs. These four industry groups together accounted for 62.24 percent of the total inputs in the factory sector.

Within the Major Industry Groups, the percentage share of 'Material Consumed' to total input of the Major Industry Groups varied considerably. It was the highest in the Major Industry Group $12-$ 'Mfg of tobacco products' at $94.05 \%$ and the lowest at $0.68 \%$ in the Major Industry Group 52'Warehousing \& support activities for transportation'

## DEPRECIATION

Depreciation means 'consumption of fixed capital' during the manufacturing process. It is estimated on the basis of cost and 'productive life' of the fixed assets concerned.

As shown in Table-10 of part II the total estimated value of depreciation for all the fixed assets in the factory sector, as per ASI 2017-18 worked out to ₹ 72,826 lakh. The average rate of depreciation calculated on the basis of total fixed capital engaged in the production activity during the survey year, worked to 10.98 percent in the factory sector.

The table-10 given below depicts the average rate of depreciation as percentage of fixed capital in some major industry groups.

## OUTPUT

Output in an industry includes products, by-products and services generated during the industrial process. The value of total output worked out to ₹ 46591.98 crore as compared to ₹ 64,811.04 crore in 2016-17 indicating thereby a decrease of 28.11 percent over the previous year. The worth of products and by-products is $₹ 31250.14$ crore whereas $₹ 15341.84$ crore is worth of 'other output' including services rendered to others and sale value of goods sold in the same condition, as purchased.

The relative contribution of the Census and Sample sectors in the 'total output', 'products and by-products' and some important ratios derived there from have been shown in the table given below:-

## VALUE ADDED BY MANUFACTURER

Value added by manufacture is a measure of the relative importance of the industrial sector in State / National economy as well as a measure of the relative importance of a particular industry within the industrial sector itself. It is used to measure the contribution of Industrial Sector in the State / National Domestic Product. The contribution of the Organized Industrial sector (factory sector) in the state domestic product of Delhi during the year 2017-18 worked out to ₹ 6016.00 crore.

## Distribution of Factories in Districts

The results revealed that maximum numbers of factories are set up in North-West, South and West district District sharing $33.18 \%, 25.42 \%$ and $23.46 \%$ of the total factories. On the other hand, Districts New Delhi, North East and North are least industrialized, sharing only $3.21 \%$ of the total number of factories. Most densely populated districts i.e. East and South West District is having $11.79 \%$ of total industries and Central District shares $2.93 \%$ of total Factories.

Note: Sum of districts' figures may not match exactly with Total due to rounding off.

## Capital Structure
