## **INTRODUCTION**

(Review of the Working of Act)

## **SECTION ONE**

### **INTRODUCTION**

The Civil registration is the continuous, permanent, compulsory and universal recording of the occurrence and characteristics of events, including vital events, pertaining to the population, as provided by decree or regulation, in accordance with the legal requirements of a country. Civil Registration is carried out primarily for the purpose of establishing the legal documents provided for by law. These records are also the best source of vital statistics.

The Civil Registration System (CRS) aimed at proper accounting of vital events for the issuance of certificates as well as generation of valuable data for plan & policy formulation on health sector, received a big boost with the promulgation of the Registration of Births and Deaths Act, 1969 (RBD Act, 1969) in all States/ UTs in the country. This Act came into force in Delhi w.e.f. 1<sup>st</sup> July, 1970 and accordingly the Delhi Registration of Births and Deaths Rules, 1970 have also been notified w.e.f. 1<sup>st</sup> January, 1971. These rules were modified and made more people friendly in December 1999 and came into force w.e.f. 1<sup>st</sup> January, 2000. Prior to the implementation of the Registration of Births and Deaths Act, 1969 (Act No. 18 of 1969), Registration of Births and Deaths in Delhi was governed by multiple Acts/ Rules. The urban area of Municipal Corporation of Delhi (MCD) was covered under the provisions of the Delhi Municipal Corporation Act, 1957 (Section 394-96) and by laws made there under, whereas this function in the rural area of MCD was carried out under the Panchayat Raj Act, 1959. Further, the MCD has been trifurcated w.e.f. May, 2012 into three corporations namely East Delhi Municipal Corporation (East DMC), North Delhi Municipal Corporation (North DMC) and South Delhi Municipal Corporation (South DMC). On the other hand, the registration within the limits of New Delhi Municipal Council (NDMC) was governed by section 188 (c) and subsection (1) of section 199 of the Punjab Municipal Act, 1911. In the area under Delhi Cantonment this function was performed under clause (1) of section 281 of Cantonment Act, 1924.

#### **MEANING & SCOPE OF CRS**

According to the United Nations, civil registration is defined as the continuous permanent and compulsory recording of the occurrence of vital events, like, live births, deaths, fetal deaths, marriages, divorces as well as annulments, judicial separation, adoptions, legitimations and recognitions. Civil registration is performed under a law, decree or regulation so as to provide a legal basis to the records and certificates made from the system,

which has got several civil uses in the personal life of individual citizens. Moreover, the information collected through the registration process provides very useful and important vital statistics also on a continuous basis at the national level starting from the smallest administrative unit. In fact, obtaining detailed vital statistics on a regular basis is one of the major functions of the Civil Registration System (CRS) in several countries of the world. Vital records obtained under CRS have got administrative uses in designing and implementing public health programmes and carrying out social, demographic and historical research. For an individual, the birth registration records provide legal proof of identity and civil status, age, nationality, dependency status etc., on which depend a wide variety of rights.

Civil Registration System may be defined as the legal recording of the occurrence of vital events (births and deaths) through a network of government offices and designated officials, together with certain identifying or descriptive characteristics of the events on a continuous, permanent and compulsory basis. Civil Registration System also serves as the tool for measuring the changes in the population. In other words, population census held once in a period of 10 years gives stock of population at a point of time whereas, vital statistics presents the flow of population.

### **MEDICAL CERTIFICATION OF CAUSE OF DEATH**

One important aspect of vital statistics is the certification of cause of death. Medical Certification of Cause of Death (MCCD) provides reliable data on cause of mortality. This data serves as a valuable tool for public health planners, administrators, medical professionals and research workers to study cause of death in the population. Keeping in view the importance of this information, the provision has been made u/s 10(2) and 10(3) of the Registration of Births & Deaths Act, 1969 for cause of death certification by the medical practitioner of the hospital last attended by the deceased and report it on Form No. 4 (in case of institutional death) and on Form No. 4A (for domiciliary death) for further submission of it along with death reporting form (Form No. 2) to the Registrar's office at the time of registration of death. Form 4 has two parts, Part-I provides for entering the diseases in a specific sequence of events leading to death so that the immediate cause is shown first

and the underlying cause is shown last. The underlying cause is that morbid condition which initiated the chain of events leading to death.

In Delhi, the reporting of Medical Certification of Cause of Death has been made compulsory since the year 2003 in respect of institutional deaths. The domiciliary deaths have not been brought under the ambit of MCCD due to various practical problems such as lack of awareness among the citizens, economic conditions and also due to non-availability of adequate health infrastructure.

## **LEVEL OF COMPUTERIZATION & FLOW OF DATA**

All local bodies have computerized the births & deaths registration system and all major hospitals are reporting the events online to the concerned Registrar (B&D). NIC has developed new software for Birth and Death Registration process, addition of name of child, correction in birth/death records in North, South & East Municipal Corporations. This has enabled a complete online system to facilitate citizen to apply Birth & Death registration/certificates from their home. Birth/death certificates can also be downloaded by the Citizens from the websites of concerned local bodies.

In North/South/East Delhi Municipal Corporations, all hospitals/ nursing homes report the vital events through newly developed online system thereby avoiding manual handling for feeding the data/ information and consequently less chances of delays, omissions etc. for reporting the events. In NDMC & DCB, almost all hospitals are reporting the vital events online. Soft copy of the CRS data is supplied along with MCCD to Chief Registrar's Office by the local bodies for preparation of Annual Report.

## **FUNDS UTILISED FOR CIVIL REGISTRATION SYSTEM**

During the year 2020-21, a total amount of Rs. 15,34,993/- was spent from State budget on printing of birth and death reporting forms in Delhi. The item wise expenditure is as under:

## LEVEL OF REGISTRATION

The registration of births and deaths varies from state to state and between births and deaths. One way to assess the performance of CRS is to compare the rates derived at state level from CRS with those derived from SRS, which collects these information for the usually resident population and provides reliable estimates of birth and death rates at state level.

The CRS in quantitative terms can be gauged primarily from the level of registration achieved consistently in a given region/ state. The level of registration may be taken as the ratio of actual number of births/ deaths registered as per CRS to the estimated births/ deaths under SRS in a calendar year.

Obviously, Delhi is among the few States/ UTs which have achieved 100% level of birth and death registration. Apart from Delhi, this list includes Arunachal Pradesh, Manipur, Uttarakhand, Chandigarh and Puducherry. The level of registration of births/ deaths in Delhi over a period of time is indicated in the above statement. It is evident from the above statement that the level of registration in Delhi was more than hundred percent mainly because of the existence of good health infrastructure as well as responsive registration mechanism at ground level. Due to this fact, the people from other areas outside Delhi also come to avail better health facilities/ treatment in Delhi's hospitals and consequently the births and deaths pertaining to non-residents of Delhi also occurred here and then the

registrations of such vital events are done in Delhi in accordance with provisions of the RBD Act, 1969 to register the vital event as per the place of occurrence of the event. Evidently, this factor plays a key role in having the number of registered births and deaths higher than the SRS estimates.

## **MEASURES FOR IMPROVEMENT OF CIVIL REGISTRATION SYSTEM**

- (i) A Citizen's Charter for Registration of Births & Deaths has been implemented and the issuance of Births & Deaths certificates has been covered under e-Service Level Agreement (SLA) to facilitate the public. The citizen charter indicates brief procedure and guidelines to be followed by the citizens of Delhi and Local Bodies for registration of Births & Deaths. This may prove helpful to improve the Civil Registration System in Delhi. All registration centers have to display the informative boards regarding various provisions under e-SLA pertaining to issuance of Birth & Death certificate to guide the public properly.
- (ii) The Chief Registrar's Office is operating a website '[www.des.delhigovt.nic.in](http://www.des.delhigovt.nic.in)' giving details of registration procedure, area wise registration centre, administrative machinery for redressal of grievances etc. Provision has also been made for the general public to give their suggestions for the improvement of the system through e-mail.
- (iii) All the local bodies have computerized their operations resulting in improvement in the quality of service rendered to the public. All major hospitals, government/ private have been provided the facility of online reporting of events and this has sped up the process of reporting/ registration of events. Further, online facility to take the birth/ death certificates directly from website is also being provided by all local bodies i.e. NDMC, North, East and South DMC and DCB.
- (iv) Total 4,62,909 birth certificates and 1,38,380 death certificates were issued under section 12 & 17 of RBD Act, 1969 during the year 2020 in Delhi.
- (v) No penalties have been imposed under section 23 of RBD Act, 1969 on defaulting institution, registrar and the individuals for non-registration, non reporting and for negligence to register any birth/ death in the year 2020.

## **Monitoring and Coordination**

A high level Interdepartmental Co-ordination Committee (IDCC) has been constituted in Delhi under the Chairmanship of Pr. Secretary (Plg.) and Chief Registrar (B&D) as Member Secretary. This committee consists of representatives from Directorate of Health Services, Education, Police and local bodies etc. to sort out the matters relating to the subject without much delay. This platform is expected to ensure close coordination and effective monitoring of the implementation of the provisions of the Act. The latest IDCC meeting was held on 04.09.2014 under the Chairmanship of Pr. Secretary (Plg.), GNCTD to discuss further measures to make the Civil Registration System people friendly. Vide Order dated 23/09/2021 it has been decided to reconstitute Inter Departmental Co-ordination Committee (IDCC) to review the progress of registration of births and deaths in NCT of Delhi from time to time and also to ensure proper co-ordination among various departments/ institutions and local bodies entrusted with the responsibilities of the registration of births and deaths in NCT of Delhi.

## Sex Ratio in Delhi

The main source for bringing out this vital indicator is Population Census data and CRS data. The population data gives universal sex ratio for every 10 years. This data suffers from two major limitations viz. time lag and does not give the realistic situation as it gets affected by the in and out migrations. Therefore, the records of registration of births & deaths become the primary source for compilation of sex ratio at State/ District etc. levels. The CRS data will provide short term and very effective inputs on this burning problem so that remedial measures can be initiated without loss of time.

The sex ratio is expressed as the number of female births to thousand male births for a particular period of time says one year/ month etc. As per the International practice, sex ratio is worked out as number of male births per 100 female births. As per the International standard, sex ratio around 105 males per 100 females is considered as an acceptable level.

## Sex Ratio as per Population Census

The universal sex ratio of Delhi as per population census for all age groups taken together was 821 females per 1000 males in 2001 and it has become 868 females per 1000 males as per final data of census - 2011. Child sex ratio (0-6 years) of Delhi went up marginally from 868 (as per census 2001) to 871 (as per census 2011). As can be seen from statement 1.3, at both points of time the figures of Delhi were below the All India level. The district-wise scenario for the children of 0-6 years varies in different districts.

## Sex Ratio as per CRS Data

The data available from Civil Registration System indicates that sex ratio at birth (refer statement 1.4) was 822 females per 1000 males in the year 2005 and it is improving every year and was 848 in the year 2007. However, during 2008 the sex ratio was reversed showing 1004 females per 1000 males which was unprecedented and may be due to implementation of LADLI SCHEME w.e.f. 01.01.2008. Further, the sex ratio at birth has increased from 920 females per 1000 males in the year 2019 to 933 during the year 2020.

## **MONTHLY MONITORING OF THE SEX RATIO OF INSTITUTIONAL BIRTH**

The national conference of Chief Registrars Births & Deaths, held in 2003 unanimously recommended for the monitoring of sex ratio on a regular basis at the State/UT level taking into account the alarming decline in the sex ratio which has become a cause of concern for the policy makers and administrators. In compliance of the mandate of the Chief Registrar Conference, Delhi has started the monthly monitoring of sex ratio of institutional births w.e.f. the year 2004.

The data is collected on monthly basis from 50 major hospitals which account for 53.01% of total registered births in the year 2020 in Delhi. This helps to review the sex ratio at the highest level in the shortest possible time without waiting for the yearly indicators. The sex ratio of institutional births on the basis of these 50 hospitals comes out to 927 in the year 2020.

From the month of January, 2021 onwards data is being collected from 100 major hospitals to increase the coverage of health institutions under the monthly monitoring system to make this exercise meaningful and truly representative of the ground reality.

## **COMPARISON OF SEX-RATIO AMONG STATES/ UTs**

The data pertaining to the scenario of sex ratio in different States/ UTs, given by office of R.G.I. may be seen in Statement 1.5. However, at the time of comparing it should also be kept in mind that Level of Registration is not uniform in all States/ UTs.

These deaths have been provided medically certified cause of death as per ICD-10 coding of WHO. The medically certified cause-wise broad classification of these deaths is given in statement 2.10.

## CRS vis-à-vis SRS Results

Any attempt aimed at making a comparison between SRS estimates and CRS results strictly speaking is not tenable as they follow different approaches to determine the basic parameters. However they can be taken as two alternatives to complement/ supplement each other. SRS estimates which are based on sampling approach serves as a short term tool in the management of health scenario as CRS results are not available at short notice. Moreover SRS covers events pertaining to domicile population where as CRS is inclusive of vital events of migratory population as events are registered as per place of occurrence under RBD Act. That is the reason why CRS results are usually on the higher side when compared to that of SRS. Further, if CRS results could be brought about in shortest possible time frame it can supplement the SRS in the times to come. Therefore the following statements are included to serve academic purpose at present.

PROFILE**

## SECTION THREE

### PROFILE OF BIRTHS REGISTRATION

In this section various aspects of birth registrations, that had taken place during 2020 under Civil Registration System, are analyzed with special reference to the number of events registered across years, male- female composition, matters relating to birth order and literacy, age of the mother at the time of child birth, the type of medical attention available in case of domiciliary events, local body-wise registration of events etc. The level of birth registration was found to be more than 100% consistently over a period of time thereby indicating the sound health of Civil Registration System in Delhi.

#### Birth Registration under Civil Registration System

During 2020, a total of 3,01,645 birth events were registered by all the local bodies taken together. Out of them, 1,55,973 (51.71%) were males, 1,45,597 (48.27%) were females and 75 (0.02%) were others.

#### Statement 3.1: Total Number of Births registered under CRS sex-wise

- Out of total registered births, 75 births have Sex “Others” during the year 2020.
- Sex “others” includes transgender/ ambiguous/ not stated.

It may be observed from the statement 3.1 that the composition of male and female births in the total births was consistently 50 - 55% and 45 - 50% respectively across the years.

The sex ratio at birth has increased from 920 females per thousand males during 2019 to 933 in 2020. Further analysis of institutional and non-institutional births indicates that sex ratio in respect of institutional births has increased from 912 (in the year 2019) to 925 in 2020, whereas in domiciliary births sex ratio increased from 1010 in 2019 to 1036 in 2020.

\*Out of total registered institutional births, 75 births have sex “others” whereas in domiciliary births no case was registered having sex “Others”.

The exceptionally higher sex ratio (during 2008) can perhaps be attributed mainly to the implementation of the various welfare schemes of the girl child (including Ladli Scheme w.e.f. 01.01.2008). However, the sex ratio based on total registered births (including institutional and domiciliary) during 2020 has been increased in comparison to the year 2019.

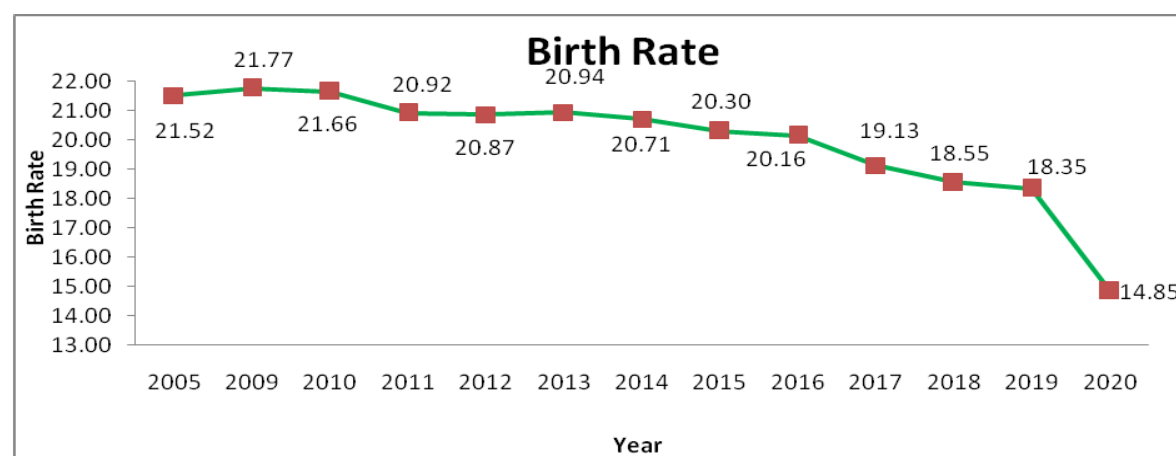

## BIRTH RATE

One of the important indicators that emerge out of Civil Registration System is the Birth Rate. Statement 3.2 provides the time series data from 2005-20. The birth rate during the period of the year 2005 to 2020 is hovering between 14-22 per 1000 population. The graph plotting the birth rate for the said period clearly exhibits this fact.

## DISTRIBUTION OF LIVE BIRTHS BY BIRTH ORDER

Birth order statistics are important indicators for measuring the progress and effectiveness of family welfare activities. Time series data on percentage distribution of births by birth order is given in statement 3.3.

**Statement 3.3: Percentage Distribution of Births by Order of birth**

Year	Birth Order			
	1	2	3	4 & above
2005	50.59	32.42	12.45	4.54
2006	56.79	28.97	11.08	3.16
2007	58.98	27.47	9.79	3.76
2008	55.12	31.24	10.15	3.49
2009	53.39	32.81	11.01	2.79
2010	60.33	29.28	8.07	2.32
2011	56.37	32.39	8.80	2.44
2012	55.80	33.14	8.83	2.23
2013	61.19	29.21	7.69	1.91
2014	55.47	33.75	8.67	2.11
2015	62.78	32.57	3.93	0.72
2016	55.78	32.89	9.29	2.04
2017	54.48	34.24	9.32	1.96
2018	56.65	32.51	9.03	1.81
2019	55.90	33.00	9.22	1.88
2020	55.74	33.47	9.20	1.59

It is obvious from above statement that the first order of births accounts for 55.74% of the total births registered during 2020. The proportion of first and second order of births taken together accounted for 89.21% in the total registered birth of 2020. The share of births beyond third order was only 1.59%.

## DISTRIBUTION OF LIVE BIRTHS BY AGE OF MOTHER

The age of the mother at the time of attainment of motherhood will have an influence on the overall health of the child and the safety of mother during the time of delivery. Attainment of motherhood below the age of 18 years is considered to be undesirable in the interest of mother as well as of the newly born child. Out of the total registered births during 2020, only 2.07% are from the mothers in the age group  $\leq 19$  years. The need of the hour is to undertake sustained campaign focused towards eligible couples in the age group of up to 18 years and living in slums, advising to avoid attainment of motherhood at such an early age.

### Statement 3.4: Percentage Distribution of Births by age of Mother

Year	Age Group of Mothers in Years				
	$\leq 19$	20-24	25-29	30-34	35 & above

2020	2.07	35.34	39.85	17.48	5.26

Statement 3.4 further reveals that 75.19% of births were given by the mothers in the age group of 20 - 29 years followed by 17.48% by the mothers in the age group of 30 - 34 years, while 5.26% of the births were given by the mothers in the age group of 35 & above years.

## TYPE OF MEDICAL ATTENTION RECEIVED AT DELIVERY

The type of medical attention received at the time of birth in case of domiciliary events is an important factor in controlling the level of infant mortality. Further, it will have a bearing on the quality of service rendered by health workers involved in the field.

### Statement 3.5: Percentage Distribution of Births by type and medical attention

2019	91.15	0.05	3.52	5.28
2020	91.94	0.90	1.22	5.94

Statement 3.5 gives percentage wise distribution of live births by type of medical attention at the time of child birth. It may be seen from the above statement that medical institutions have accounted for more than 90% of the total births during 2020. Obviously, the share of institutional births has gone up continuously. It was only 73.72% in 2005. During 2020, the proportion of institutional births to total registered births has increased approximately 0.87% in comparison to year 2019. In the year 2020, total 2,77,334 live births occurred in the hospitals i.e. on an average 758 live births occurred daily in the hospitals during 2020.

## BIRTH EVENTS - LOCAL BODY WISE

Statement 3.6 reveals the distribution of birth events of 2020 among local bodies of Delhi. Out of the total births, 88.50% were registered in the MCD whereas NDMC accounted for 10.41%. The total registration under DCB constitutes only 1.09% of the total births. After the trifurcation of MCD, it has been observed that maximum (33.69%) births were registered in South DMC followed by North DMC (32.70%) and East DMC (22.10%). Further, break-up of registered birth events reveals that only 9.16% of the births were rural, whereas 90.84 % were urban.

## BIRTHS BY BIRTH ORDER VIS-À-VIS LEVEL OF MOTHER'S EDUCATION

It is widely known that there is close relationship between the level of educational attainment of mother and order of births. The data presented in statement 3.7 states that a specific trend has been seen in the level of education of the mother, and the birth order. It is evident from column No. 6 that proportion of births under “Graduate and above” category is decreasing with the higher order of birth.

Further, it is observed that out of total births of fourth and higher birth order, in 25.07% cases the level of education of mother was ‘matric but below graduate’ and in 20.09% cases, the mothers were illiterate. Obviously, in case of fourth and higher order of birth minimum proportion of births were in the category of mother having ‘graduation or above qualification’.

### REGARDING STILL BIRTHS

Of late, it is being observed that data / information which pertains to still births is not reported regularly by the hospitals/ institutions to the concerned Registrar (B&D). The Office of Chief Registrar (B&D) has made a communication to sensitize the Medical Superintendents of the hospitals/ institutions to report the vital events inclusive of still births within the stipulated period of 21 days to the concerned Registrar (B&D).

An effort has been made to present the data on still births for the years 2015 to 2020 in the statement 3.9.

## Medically Certified Cause of Deaths

Statement 4.9 provides MCCD data pertaining to institutional deaths as per coding of ICD-10. The ICD-10 is used to translate diagnosis and other health related problems from words to alphanumeric code and thereby facilitates the classification and analysis of data. This statement provides the status regarding major causes of deaths as per MCCD for institutional deaths during 2020. In this regard, more details are presented in Table D-11 of the section 5 of the report.

## CONCEPTS & DEFINITIONS

**Some important concepts used in this Annual Report are defined as follows:**

1. **Birth**: “Birth” means live-birth or still birth.
2. **Live Birth**: “Live-Birth” means the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which after such expulsion or extraction, breathes or shows any other evidence of life, and each product of such birth is considered live-born.
3. **Still-Birth**: “Still-Birth” means foetal death where a product of conception has attained at least the prescribed period of gestation.
4. **Death**: “Death” means the permanent disappearance of all evidence of life at any time after live-birth has taken place.
5. **Foetal Death**: “Foetal Death” means absence of all evidence of life prior to the complete expulsion or extraction from its mother of a product of conception irrespective of the duration of pregnancy.
6. **Infant Death**: “Infant Death” means death of a child less than one year old.
7. **Level of Registration**: The level of registration, defined as the percentage of registered births/ deaths to the births/ deaths estimated through SRS, determines the performance of a State/ Union Territory with regard to functioning of Civil Registration System.

$$\text{Level of Registration (LOR)} = \frac{\text{Number of events registered during the year}}{\text{Number of estimated events for the year}} \times 100$$

$$\text{Number of estimated events for the year} = \text{Mid-year population} \times \text{SRS Rate}$$

8. **Mid-year Population**: “Mid- year population” means, population at the mid-point of the year, i.e. 1<sup>st</sup> July of the year provided by population projection of 2020.

$$\text{Sex Ratio at Birth} = \frac{\text{No. of female births registered during the year}}{\text{No. of male births registered during the year}} \times 1000$$

Delayed Registered Birth events of more than one year have been duly deducted for arriving the sex ratio at birth.

9. **Birth Rate**: Birth rate acts as an index of the relative speed at which additions are being made to the population through child-birth. It is only a live birth that signifies an addition to the existing population, excluding still births.

The annual birth rate is defined as:

$$\text{Birth Rate} = \frac{\text{No. of Births in a year}}{\text{Mid-year Population}} \times 1000$$

10. **Death Rate:** The death rate for a given year tells us at what rate deaths have depleted the population over the course of the year.

The death rate, which measures the decrease in a population due to deaths, is perhaps the most widely used of any vital statistics rate because of its value as an index in numerous demographic & public health problems.

The Annual Death Rate is defined as :

$$\text{Death Rate} = \frac{\text{No. of Deaths in a Year}}{\text{Mid-year Population}} \times 1000$$

11. **Infant Mortality Rate:** Infant mortality rate serves as one of the best indices to the general “healthiness” of a society. It is similar to age-specific death rate for infants under 1 year of age.

The annual infant mortality rate is defined as :

$$\text{Infant Mortality Rate} = \frac{\text{No. of deaths under 1 year of age which occurred among the population}}{\text{No. of live births which occurred among the population}} \times 1000$$

12. **Maternal Death Rate:** Maternal death rate is defined as maternal deaths per thousand live births.

$$\text{Maternal Death Rate} = \frac{\text{No. of Maternal Deaths}}{\text{No. of live births}} \times 1000$$

13. **Neo Natal Mortality Rate:** The neo-natal mortality rate, like the infant mortality rate, is similar to an age specific rate. It is a rate used to measure the risk of death during the first month of life and is defined as:

$$\text{Neo-Natal Mortality Rate} = \frac{\text{No. of deaths of infants under the age of 1 month which occurred among the population}}{\text{No. of live births which occurred among the population}} \times 1000$$

14. **Post Natal Mortality Rate:** The post natal mortality rate, like the infant mortality rate, is similar to an age specific rate. It is a rate used to measure the risk of death during 28 days to 12 months of life and is defined as:

$$\text{Post-Natal Mortality Rate} = \frac{\text{No. of deaths of infants during the age of 28 days to 12 months which occurred among the population}}{\text{No. of live births which occurred among the population}} \times 1000$$
