PREFACE

This report on Medical Certification of Cause of Death is brought out by the Directorate of Economics & Statistics and Office of Chief Registrar (Births & Deaths), GNCTD. The Registration of Births and Deaths Act, 1969 provides for certification of cause of death by the medical practitioners who have last attended the deceased. The Section 10(2) of the Act empowers the State Government to introduce the system of medical certification of cause of death. In Delhi, the medical certification of cause of death has been made compulsory in July 2003 by bringing all the hospitals, government as well as private in the purview of the provisions of Section 10(3) of the RBD Act, 1969.

The report has been prepared exclusively on the basis of data on institutional deaths in Delhi. In domiciliary cases MCCD is not reported, so the readers of this report may bear in mind that this study is confined to 63.91% of the registered deaths during 2016 in Delhi which have occurred in hospitals.

The report is divided into four sections. First section is regarding the introduction of medical certification of cause of death (MCCD). Second section is for MCCD at a glance reflecting the level of death registration during 2001-2016 and distribution of institutional deaths by major causes during 2016. Third section is the Time Series analysis of MCC Deaths during the period 2001-2016. Detailed statistical tables are given in section four. In this section, period from the year 2001 to 2016 is taken into consideration for the study. This part contains the study of institutional deaths - local body wise, sex-wise and age-wise. It has also been attempted to analyze the incidence of major causes of deaths during the period 2001-2016 in Delhi on the basis of International Classification of Diseases (ICD) - 10 classification of WHO. This section specifically includes analysis of deaths due to Heart attack, cancer, tuberculosis, pneumonia, diabetic mellitus etc. in Delhi.

I would like to bring on record my appreciation for the sincere efforts put in by the officers and officials of Vital Statistics Unit in the preparation of the report.

It is hoped that this report will be a useful tool in the hands of policy makers of health related sectors, socio economic planners, health planners, researchers, scholars etc. Suggestions for further improvement in the report, if any, are welcome.

SECTION ONE

INTRODUCTION

SECTION ONE

INTRODUCTION

The Registration of Births and Deaths Act, 1969 (RBD Act, 1969) came into force in Delhi w.e.f. 1st July, 1970. The Act aims at compulsory accounting of vital events which results in the issuance of certificates as well as generation of valuable data for plan and policy formulation on health sector. The Delhi Registration of Births and Deaths Rules, 1970 have also been notified w.e.f. 1st January 1971. Further, these rules have been modified as per direction of Registrar General India in December, 1999 and came into force w.e.f. 1st January, 2000. Directorate of Economics & Statistics, Govt. of N.C.T. of Delhi also functions as the Office of Chief Registrar (Births & Deaths) for the N.C.T. of Delhi. The actual registration of Births & Deaths in Delhi is done by five local bodies viz North/South/East Delhi Municipal Corporations, NDMC and Delhi Cantonment Board through the registration offices spread under their respective jurisdictions. Each local body has the provision of Additional Chief Registrar (Birth & Death) to coordinate for smooth and effective functioning of registration work of vital events occurred in the respective jurisdictional area. The registration office/zone under the local body is headed by Registrar (B&D).

MEANING OF MCCD

Medical Certification of cause of death is a record of the cause of death i.e. the disease, abnormality or injury which has directly or indirectly contributed to the death of a person. Death often results from the combined effect of two or more conditions. Sometimes these conditions may be related or un-related. When the conditions are related the underlying cause of death is the disease or injury which initiated the sequence of events. All other conditions of death other than the underlying cause of death is termed as antecedent and immediate cause of death. The system of medical certification of cause of death provides cause specific mortality profiles which is a key indicator for analyzing the health trends of population in a scientific manner. The analysis of causes of deaths in different age groups has immense value to the public health planners/administrators, medical professionals, epidemiologists and research workers etc.

STATUTORY PROVISIONS

The section 10 (2) of the RBD Act empowers the State govt. to introduce the system of medical certification of cause of death in specified areas taking into consideration the facilities available and other related factors. The Section 10 (3) of the Act makes it mandatory for the medical practitioner, who has attended the person during his/her last illness, to issue a medical certificate of cause of death in the prescribed format, in the event of the death of the person, without charging any fee. The Certificate of cause of death is submitted to the Registrar (B&D) by the informant along with the death report. As per Section 17 (1) (b) of the Act the Registrar (B&D) has to keep the confidentiality of cause of death of the individual; therefore the particulars of cause of death are not disclosed to any person while issuing the extract of the death register. Further, Section 23(3) of the RBD Act stipulates that any medical institution/practitioner who neglects or refuses to issue a MCCD certificate under sub-section (3) of section 10 shall be punished with a fine upto fifty rupees.

MEDICAL CERTIFICATION OF CAUSE OF DEATH IN DELHI

In the NCT of Delhi the medical certification of cause of death has been made compulsory for all the hospitals managed by Govt./Autonomous bodies including specialized hospital and all nursing homes managed by private organizations and societies of rural and urban areas since July 2003. However all domiciliary events have been kept out of the coverage of the Medical Certification of Cause of Death.

As per Act and Rules there is provision of Form No. 4 for reporting the cause of death in case of institutional deaths and Form No.4A for reporting the cause of death in domiciliary cases. However, the reporting of cause of domiciliary deaths event is purely voluntary.

SYSTEM OF IMPLEMENTATION

All major hospitals/health institutions both in public and private (including Charitable) are reporting death events online, more than 900 in number. The remaining hospitals report the details of the events to the concerned Registrar (B&D) along with the duly filled up form number 4.

The successful implementation of scheme of Medical Certification of Cause of Death and the quality of data generated under it viz to a great extent depends on two factors, i.e. level of death registration and proportion of institutional death events. Medical Certification of Cause of Death in States/UTs

The Registrar General, India and the World Health Organization have stressed the need to have a better system of reporting of cause of death along with the death report. Delhi is one of the few States which has successfully implemented the scheme. During the period of 2001-2016, in Delhi, approx. 64% of the total deaths have taken place in hospitals.

The Office of RGI has provided the MCCD data of different States/UTs. The following table reflects the number of MCCDeaths and percentage of these Deaths to Registered Deaths during the years 2013 to 2015:

SECTION THREE

TIME SERIES ANALYSIS OF MEDICALLY CERTIFIED CAUSE OF DEATH

SECTION THREE

TIME SERIES ANALYSIS OF MEDICALLY CERTIFIED CAUSE OF DEATH

This Section is devoted to the analysis of trends in the deaths registered in Delhi during the period 2001 to 2016. This section also attempts an analysis of the trends in deaths due to specific causes like heart attack, cancer, tuberculosis, pneumonia and diabetic mellitus in Delhi during 2001-2016.

Medical Certification of cause of deaths in retrospect (2001-2016)

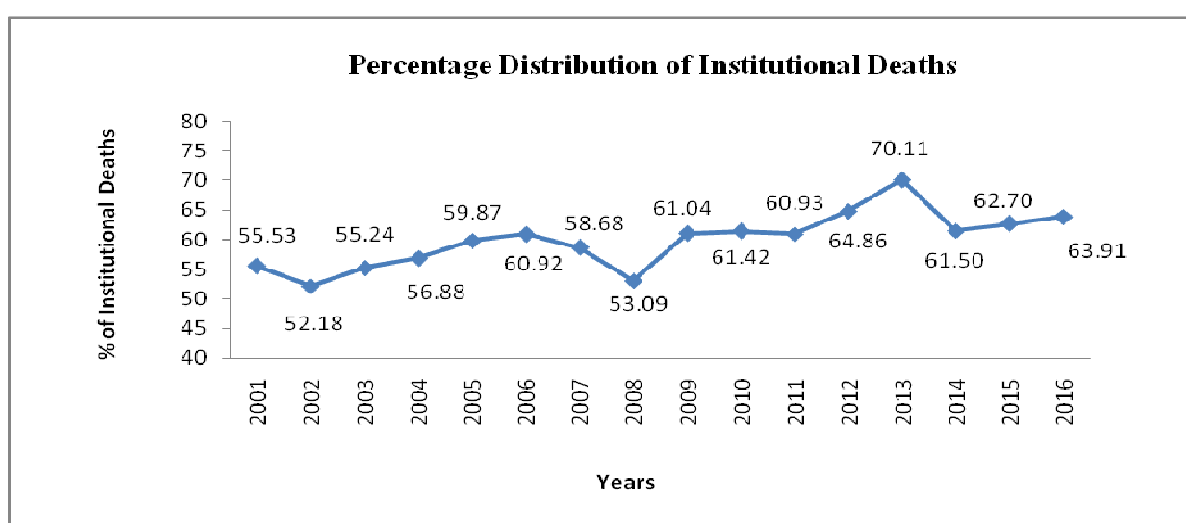

It is observed that during the period from 2001-2016, the level of institutional deaths in Delhi has varied between 52.18 to 70.11 percent. The lowest level i.e. 52.18% institutional deaths were reported during the year 2002 and the maximum level i.e. 70.11% were reported during 2013. During the year 2003, the notification regarding mandatory provision of providing cause of death for every institutional death in Delhi was issued. The following table shows the percentage distribution of medically certified cause of deaths i.e. the proportion of institutional deaths to total deaths.

Statement No 3.1: Distribution of Institutional Deaths during pre and post MCCD Notification (Year-2003):

Year	Total Deaths	Institutional Deaths	Percentage
A. Prior to Notification			
2001	81100	45034	55.53
2002	86176	44965	52.18
B. After Notification			
2003	87743	48473	55.24
2004	85378	48559	56.88
2005	94187	56390	59.87
2006	98908	60254	60.92
2007	100974	59256	58.68
2008	107600	57122	53.09
2009	112013	68373	61.04
2010	124353	76373	61.42
2011	112142	68326	60.93
2012	104616	67856	64.86
2013	97185	68135	70.11
2014	121286	74592	61.50
2015	124516	78067	62.70
2016	141632	90517	63.91

From the table, it is clear that the total No. of deaths in Delhi has increased from 81100 in the year 2001 to 141632 in the year 2016. It may be observed that during the year 2007 to 2012 and 2014 to 2016, the number of deaths in Delhi were above one lac. During the period of 2001 to 2016, the lowest number of deaths i.e. 81100 were reported in 2001 and the highest number i.e. 141632 were reported in 2016. It is also observed that the proportion of institutional deaths to total deaths was in the range of 52 to 60 percent during 2001 to 2008 and above 60% from the year 2009. However, this proportion was maximum to the level of 70 percent during 2013 which reflect that the families of the deceased have tried their best to get the treatment by admitting them in hospitals.

The following diagram will show the trend in institutional deaths in Delhi:

The graph pertains to the percentage distribution of institutional deaths clearly reflect that after the year 2008, the proportion of institutional deaths is lying between 61 to 70 percent.

Local Body wise Institutional Deaths

The Municipal Corporation of Delhi has been trifurcated in to three local bodies i.e. North/South/East Delhi Municipal Corporation w.e.f. April 2012 and due to this fact the death events occurred and registered in municipal corporation area in 2015 have been reflected in three local bodies. Therefore, the information of registered institutional death events has been given in r/o five local bodies for 2016 including NDMC & Delhi Cantonment Board.

The following table shows the local body wise details of institutional deaths in Delhi during the period from 2001 to 2016:

2016	27962	18611	14977	61550	27164	1803	90517

The time series given in statement 3.2 shows that 1679809 deaths were registered in Delhi during the period from 2001 to 2016 and out of these 60.26% were institutional deaths. The local body wise analysis of proportion of institutional deaths during 2016 reflect that maximum i.e. 30.89% occurs in North DMC followed by 30.01% in NDMC, 20.56% in South DMC, 16.55% in East DMC and 1.99% in DCB. Evidently, maximum institutional deaths were in North DMC and it is due to the presence of big central government hospitals in NDMC area, however it may be observed that before the year 2016 the maximum deaths vis-a-vis institutional deaths were always in the then MCD due to jurisdiction over large area.

The following diagram will make clear the trend regarding institutional deaths in MCD, NDMC and DCB areas:
