## **PREFACE**

This Present report on Medical Certification of Cause of Death is brought out by the Directorate of Economics & Statistics and office of Chief Registrar (Births & Deaths) Delhi. The Registration of Births and Deaths Act 1969 provides for certification of cause of death by the medical practitioners who have last attended the deceased. Section 10(2) of the act empowers the State Government to introduce the system of medical certification of cause of death in respective states. The medical certification of cause of death has been made compulsory in July 2003 by bringing all the hospitals, government as well as private in the purview of the provisions of 10(3) of the RBD Act, 1969.

The report has been prepared exclusively on the basis of data on institutional deaths in Delhi. In domiciliary cases MCCD is not reported, so the readers of this report may bear in mind that this study is confined to 61% of the deaths in Delhi which have taken place in hospitals.

The report is divided into three sections. First section is regarding the introduction of medical certification of cause of death (MCCD). Second section is for MCCD at a glance reflecting the level of death registration during 2001-2006 and distribution of institutional deaths by major causes during 2006. Third section is the Time Series analysis of MCC Deaths during the period 1996-2006. In this section eleven year period from 1996 to 2006 is taken into consideration for the study. This part contains a study of institutional deaths- local body wise, sex-wise and age-wise. It has also been attempted to analyze the incidence of major causes of death during the period 1996-2006 in Delhi on the basis of ICD - 10 classification of WHO. This section is also includes analysis of deaths due to Heart attack, cancer, tuberculosis, pneumonia, diabetic mellitus etc. in Delhi.. Fourth section contains statistical tables.

It is hoped that this report will be a useful tool in the hands of policy makers of health related sectors, socio economic planners, health planners, researchers, scholars etc. Suggestions for further improvement in the report, if any, are welcomed.

I would like to bring on record my appreciation for the sincere efforts put in by the officers and officials of Vital Statistics Unit in the preparation of the report.

<b>SECTION TWO</b>	<b>MCCD AT A GLANCE</b>	<b>3-11</b>
<b>SECTION THREE</b>	<b>TIME SERIES ANALYSIS OF MCC DEATHS</b>	<b>12-22</b>
<b>SECTION FOUR</b>	<b>STATISTICAL TABLES</b>	<b>23-53</b>

# **SECTION ONE**

## **INTRODUCTION**

The Registration of Births and Deaths Act 1969 ( RBD Act 1969 ) came into force in Delhi w.e.f. 1<sup>st</sup> July,1970. The Act aims at compulsory accounting of vital events which results in the issuance of certificates as well as generation of valuable data for plan and policy formulation on health sector. The Delhi Registration of Births and Deaths Rule 1970 have also been notified w.e.f. 1<sup>st</sup> January 1971. These rules have been modified and made more people friendly in December 1999 and came into force w.e.f. 1<sup>st</sup> January 2000. Directorate of Economics & Statistics Govt. of N.C.T. of Delhi also functions as the office of Chief Registrar ( Births & Deaths ) for the N.C.T. of Delhi. The actual registration of Births & Deaths in Delhi is done by three local bodies viz MCD, NDMC, and Delhi Cantonment Board through the network of centre spread all over Delhi. Each local body has a notified Additional Chief Registrar to coordinate in the designated geographical area.

### **MEANING OF MCCD**

Medical Certification of cause of death is a record of the cause of death i.e. the disease, abnormality or injury which has directly or indirectly contributed to the death of a person. Death often results from the combined effect of two or more conditions. Sometimes these conditions may be related or un-related. When the conditions are related the underlying cause of death is the disease or injury which initiated the sequence of events. All other conditions of death other than the underlying cause of death is termed as antecedent and immediate cause of death. The system of medical certification of cause of death provides cause specific mortality profiles which is a key indicator for analyzing the health trends of population in a scientific manner. The cause of death in different age groups are of immense value to the public health planners, administrators, medical professionals epidemiologists and research workers.

### **STATUTORY PROVISIONS**

The Registration of Births and Deaths Act 1969 Provides for Certification of cause of death by a medical practitioner, who has attended the deceased during the latter's last illness. Provision of section 10 (2) of the act empowers the State govt. to introduce the system of medical certification of cause of death in specified areas taking into consideration the facilities available and other related factors. Section 10(3) of the Registration of Births & Deaths Act 1969 makes it mandatory for the medical practitioner, who attended the person during his last illness, to issue a medical certificate of cause of death, in the event of the death of the person, without charging any fee, in the prescribed format, stating to the best of his knowledge and belief, the cause of death. The Certificate of cause of death will be delivered to the registrar by the informant along with the death report. Section 17 (1) (b) of the Act ensures the Confidentiality of cause of death which is reported by the medical practitioner. The particulars of cause of death will not be disclosed to any person, while issuing the extract of the death register. Further Section.23(3) of the RBD Act 1969 casts a responsibility on the medical practitioner by stating that any person who neglects or refuses to issue a certificate under section 10(3) and any person who neglects or refuses to deliver such certificate shall be punishable with a fine which may extend up to fifty rupees.

## **MEDICAL CERTIFICATION OF CAUSE OF DEATH IN DELHI**

In the NCT of Delhi the medical certification of cause of death has been made compulsory for all the hospitals managed by Govt./Autonomous bodies including specialized hospital and all nursing homes managed by private organizations and societies of rural and urban areas since July 2003. However all domiciliary events have been kept out of the coverage of the Medical Certification of Cause of Death.

Two types of forms are circulated through the concerned registrars viz. Form No.4 and Form No. 4A. Form No. 4 is used for the purpose of reporting cause of death in case of death taken place in hospitals & Form No.4A is used for reporting the cause of death in domiciliary cases. Reporting of cause of death of domiciliary event is purely voluntary.

## **SYSTEM OF IMPLEMENTATION.**

In the area under MCD all major hospitals/ health institutions both in public and private (including Charitable) are reporting death events on line. The remaining hospitals report the details of the events to the concerned registrar (B & D) along with the duly filled up form No4. In the NDMC & DCB areas the events are being reported manually at present. However NDMC is likely to introduce on line reporting in due course of time

\* \* \*

## SECTION TWO MCCD AT A GLANCE

The successful implementation of scheme of Medical Certification of Cause of Death and the quality of data generated under it to a great extent depends on two factors viz. level of death registration and proportion of institutional death events. Fortunately Delhi is on a sound footing in both respects.

### Statement No 2.1: Level of Death Registration

YEAR	MID YEAR POPULATION (IN 000)	TOTAL REGISTERED DEATH UNDER C R S	ESTIMATED NO. OF DEATHS UNDER SRS	LEVEL OF DEATH REGISTRATION %
1	2	3	4	5
2001	13950	81100	69750	116
2002	14383	86176	73353	117
2003	14843	87743	74215	118
2004	15279	85378	71811	119
2005	15718	94187	72303	130
2006	16175	98908	76023	130

### Statement No 2.2: No .of Institutional Deaths

YEAR	TOTAL DEATHS	INSTITUTIONAL DEATHS	% OF INSTITUTIONAL DEATHS TO TOTAL
2001	81100	45034	55.53
2002	86176	44965	52.18
2003	87743	48473	55.24
2004	85378	48559	56.88
2005	94187	56390	59.87
2006	98908	60254	60.92

## Deaths by Major Causes

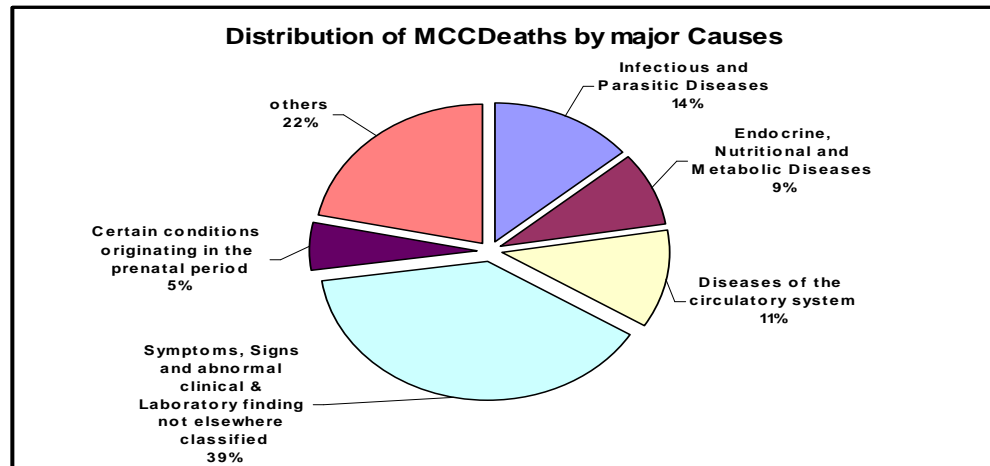

During 2006, out of 98908 (64028 males and 34880 females) deaths, 60254 deaths (40475 males and 19779 females) were covered in the MCCD. The classification of medically certified deaths by leading causes during 2006 as per International classification of Disease 10<sup>th</sup> revision is presented as under:-

### Statement No 2.3: Distribution of Institutional Deaths by major causes

S.No	Cause of Death along with ICD 10	Total no of Institutional Deaths			
		Male	Female	Total	%age to total
1	Infectious and Parasitic Diseases (A00-B99)	5469	2896	8365	13.88
2	Neoplasms (C00-D48)	880	591	1471	2.44
3	Diseases of the Blood and blood forming organs and certain disorders involving the immune mechanism (D50-D89)	276	256	532	0.88
4	Endocrine, Nutritional and Metabolic Diseases (E00-E99)	3016	2150	5166	8.57
5	Mental and Behavioural disorders (F01-F99)	18	7	25	0.04
6	Diseases of the Nervous System (G00-G98)	1046	610	1656	2.75
7	Disease of the eye and adnexa (H00-H59)	0	0	0	0
8	Disease of ear and mastoid process (H60-H95)	0	0	0	0
9	Diseases of the circulatory system (I00-I99)	4698	2150	6848	11.37
10	Diseases of the Respiratory System (J00-J98)	1591	725	2316	3.84
11	Diseases of the Digestive System (K00-K92)	1016	455	1471	2.44
12	Diseases of the skin and subcutaneous tissue (L00-L98)	9	4	13	0.02
13	Diseases of the Muscular Skeletal system connective tissue (M00-M99)	37	18	55	0.09
14	Diseases of the Genitourinary System (N00-N99)	853	461	1314	2.18
15	Pregnancy, Childbirth and Puerperium (O00-O99)	0	91	91	0.15
16	Certain conditions originating in the prenatal period (P00-P96)	2026	1164	3190	5.29
17	Congenital Malformations, Deformations & Chromosomal abnormalities (Q00-Q99)	71	44	115	0.19
18	Symptoms, Signs and abnormal clinical & Laboratory finding not elsewhere classified (R00-R99)	16505	7044	23549	39.08
19	Injury, poisoning and certain other consequences of external causes (S00-T98)	1342	709	2051	3.4
20	External causes of Morbidity and Mortality (V01-Y89)	1622	404	2026	3.36
<b>Total</b>		<b>40475</b>	<b>19779</b>	<b>60254</b>	<b>100.00</b>
		<b>67.17</b>	<b>32.83</b>	<b>100.00</b>	

The following diagram will further illustrate the major causes which have accounted for deaths during 2006:-

The category death due to infectious and parasitic diseases includes major diseases like Cholera, Typhoid, Diarrhea, Gastroenteritis, Tuberculosis, Leprosy, Diphtheria, Tetanus, Septicemia, Hepatitis B, HIV, Malaria etc. During 2006, deaths due to major infectious and parasitic diseases constituted 8365 deaths which works out to 13.88% of the total institutional deaths. Out of this 165 deaths are due to cholera 3064 deaths are due to Tuberculosis, 198 deaths are due to Tetanus, 3894 are due to Septicemia, and 281 are due to Hepatitis B.

The category neoplasm shows the deaths due to cancer and cancer related diseases. Total number of deaths due to cancerous diseases is 1471 which works out to 2.44% of the total institutional deaths during 2006. Cancer of oral cavity, digestive organs, respiratory and thorax organs, breast cancer, neoplasm of genitourinary organs, leukemia etc. are the important types of cancers, included in this category. Out of 1471 cancer deaths, 23 deaths are due to cancer of oral cavity, 162 deaths are due to cancer of digestive organs, 161 deaths are due to cancer of respiratory and intra thoracic organs, 86 deaths are due to breast cancer, 241 deaths are due to cancer of genito urinary organs and 177 deaths are due to leukemia.

Diseases like thalassaemia, anemia and disorders involving immune mechanism are included in the category of diseases of the blood and blood forming organs and disorders involving the immune mechanism. Total number of institutional deaths due to the above disease is 532 which work out to 0.88 % of the total institutional deaths. Out of 532 deaths 33 are due to thalassaemia and 455 are due to anaemia.

The category endocrine, nutritional and metabolic diseases include disorders of thyroid, diabetic mellitus etc. The deaths due to these diseases are 5166, which works out to 8.57 % of the total institutional deaths. Out of 5166 deaths 5118 deaths are due to diabetic mellitus.

The category diseases of the nervous system include diseases like meningitis, encephalitis, epilepsy etc. This category accounts for 1656 number of deaths during 2006, which is 2.75% of the total institutional deaths during the year. Out of 1656 deaths, 921 deaths are due to Meningitis, 417 deaths are due to encephalities and 40 deaths are due to epilepsy.

It is noticed that the diseases of the circulatory system i.e. heart and heart related problems account for a major cause of death in Delhi. In this category chronic rheumatic heart diseases, hypertensive heart diseases, acute myocardial infarction, pulmonary heart diseases, cerebrovascular heart diseases are included. Heart diseases account for 6848 deaths of which 4698 are males and 2150 are females. It works out to 11.37% of the total institutional deaths during 2006. Out of 6848 deaths 276 deaths are due to chronic rheumatic heart diseases, 579 deaths are due to hypertensive heart diseases, 790 deaths are due to acute myocardial infection, 383 deaths are due to pulmonary heart diseases, 868 deaths are due to cerebrovascular diseases.

Another major cause of death is the diseases of the respiratory system. This includes respiratory infections, bronchitis and acute bronchitis, asthma, influenza, pneumonia etc., which account for 2316 deaths of which 1591 are male deaths and 725 are female deaths. This is 3.84% of the total institutional deaths. Out of 2316 deaths, 35 deaths are due to acute bronchitis and acute bronchiolitis, 257 deaths due to asthma 810 deaths are due to pneumonia.

Another major cause of death is the diseases that affect the digestive system. This category includes gastric and duodenal ulcer, gastroenteritis, appendicitis, hernia, hepatitis, disorder of liver, disorder of pancreas etc. A total of 1471 persons (1016 males and 455 females) died of diseases connected with the digestive system during the year, 2006. It is 2.44% of the total institutional deaths. Out of 1471 deaths 59 deaths are due to gastric and duodenal ulcer 816 deaths are due to disorders of liver, and 48 deaths are due to disorders of pancreas.

The diseases connected with the genitourinary system has accounted for the death of a total of 1314 persons 853 are males and 461 are females. It is 2.18% of the total institutional deaths. This category includes 1091 deaths due to renal failure.

Certain conditions originating in the prenatal period have accounted for 3190 deaths of which 2026 are male deaths and 1164 are female deaths. It is 5.29% of total institutional deaths in Delhi. Death categorized under this head takes place in infants. Deaths under this category are due to complications of pregnancy, slow foetus growth, malnutrition & immaturity, hyporia, birth asphyxia, infections of pre-natal period, hematological disorders etc. Out of 3190 deaths 995 deaths are due to slow foetal growth, foetal malnutrition and immaturity, 1306 deaths are due to Hyporia, birth asphyxia and other respiratory conditions 419 deaths are due to infection specific to the prenatal period.

Symptoms signs and abnormal clinical and laboratory findings not elsewhere classified account for 23550 deaths out of which 16506 male deaths and 7044 are female deaths. 39.08% of the institutional deaths during 2006 are included in this category.

Injury, poisoning and certain other consequences of external causes are responsible for 2051 deaths of which 1342 are males and 709 are females. The main reasons of death under this category are burns and corrosions and later effects of injuries and poisoning and other consequences of external causes. The death under this category works out to 3.40% of the total institutional deaths.

External causes of morbidity and mortality include deaths due to transport accidents, railway accidents, drowning, exposure to smoke, fire and flames, bites of snakes etc. The external causes of morbidity and mortality account for 2025 deaths of which 1621 are males and 404 are females. This is 3.36% of the total institutional deaths.

## Analysis of Medically Certified Deaths by Causes & Age groups

### Infant Deaths by Major Causes

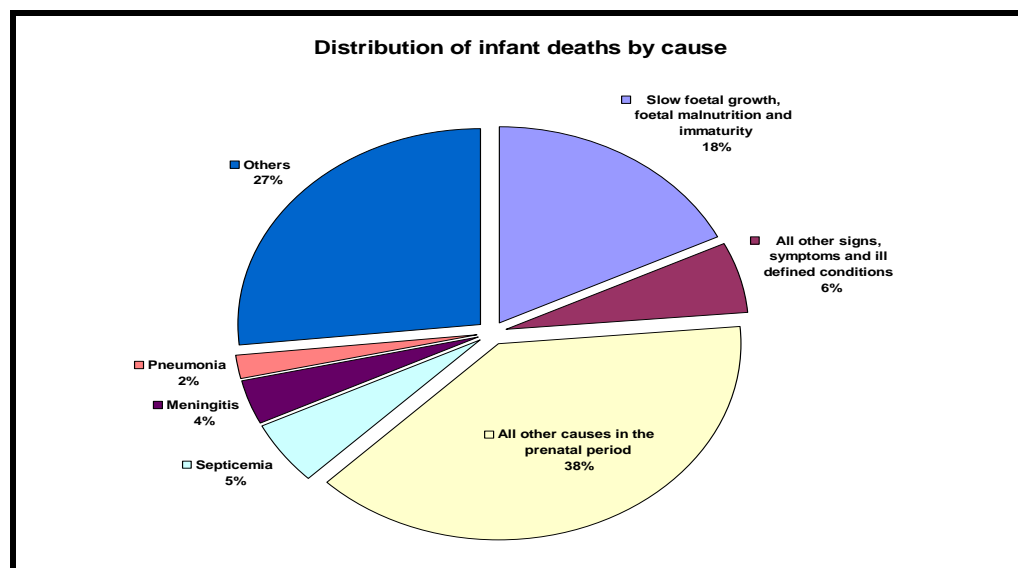

Out of total 98908 deaths 5825 are infant deaths during 2006. Out of the 5825 infant deaths, 3603 are male infant deaths and 2222 are female infant deaths. The infant mortality rate is 18.05%. The neo natal mortality rate i.e. the number of infant deaths under the age of one month is 11.64 and the post natal mortality rate is 6.41. Further out of the total of 5825 infant deaths 5623 (96.53%) were in MCCD. The following table gives the distribution of 5623 institutional infant deaths classified according to 6 leading causes of death.

#### Statement no 2.4: Distribution of infant deaths by major causes

S.No	Cause of Death & ICD No. 10	No. of Infant Deaths			
		Male	Female	Total	%
1	Slow foetal growth, foetal malnutrition and immaturity (P05-P08)	605	390	995	17.70
2	All other signs, symptoms and ill defined conditions (R00-R08, R11-R17, R19-R39, R 41-49, R51-R53, R58-R99)	200	127	327	5.81
3	All other causes in the prenatal period (P00-P08, P29-P54, P56-P57, P60-P96)	1421	774	2195	39.04
4	Septicemia (A40-A41)	174	120	294	5.23
5	Meningitis (G00-G03)	110	90	200	3.56
6	Pneumonia (J12-J18)	73	42	115	2.04
7	Others	906	591	1497	26.62
Total		3489	2134	5623	100.00

It is observed that out of the total institutional infant deaths during the year 2006, all other causes in the prenatal period account for 39.04%, Slow Foetal growth, foetal malnutrition & immaturity account for 17.70%, Symptoms, signs and abnormal clinical & laboratory findings n.e.c. accounts for 5.81% .

As per analysis of Medical Certification of Cause of Death, 5.23% infants died of septicemia, 3.56% died of meningitis, 2.04% due to Pneumonia and 26.62% infants died due to other reasons. The pie diagram represents the infant deaths by major causes.

## MCC Deaths by age group:

The following Bar diagram depicts the number of MCC Deaths by age groups:

Obviously, Maximum number of Institutional Deaths during 2006 occurred in the age group of 45-64 years, The number of institutional deaths in the age group of 14 years & below, 25-44 years and 65 years & above have no significant difference. It may also be noted that minimum number occurred in the age groups of 15-24 years.

## Age group wise Institutional Deaths by causes:

### Children aged 1-4 years:

Mortality among the children of this age group has been 6.35%. It is 4.20% for males and 2.15% for females. Of the total institutional deaths of 3824 (2529 males and 1295 females) children, the infectious and parasitic diseases caused 14.49% deaths. Another 4.29% died by diseases of the respiratory system; 35.75% by Symptoms, signs and abnormal clinical & laboratory findings n.e.c., 5.54% by the diseases of nervous system, and 5.46% by diseases of circulatory system.

### Children aged 5-14 years:

Mortality of this age group has been 6.14%. It is 3.88% for males and 2.26% for females. Of the total institutional deaths of 3701 (2339 males and 1362 females) in this age-group, the leading causes of mortality are infectious and parasitic diseases (15.10%); injury and poisoning (3.84%); symptoms, sign and abnormal clinical & laboratory findings n.e.c. (37.42%), diseases of the nervous system and sense organs (6.94%), disease of circulatory system (5.92%) and diseases of the respiratory system (3.24%).

### **Persons aged 15-24 years:**

Mortality of this age group has been 9.96%. It is 6.66% for males and 3.30% for females. Of the total institutional deaths of 6002 (4013 males and 1989 females) in this age group, predominant causes of mortality in both the sexes are injury and poisoning (7.11%); Infectious and parasitic diseases (17.09%) and Symptoms, signs and abnormal clinical & laboratory findings n.e.c. (41.09%). About 2.48% women of this age group died due to burns, 0.47% due to complication of pregnancy, childbirth and the puerperium, 3.80% by diseases of nervous system, 8.28% by diseases of circulatory system, 1.63% by diseases of the respiratory system, 6.58% by external causes of morbidity and mortality.

### **Persons aged 25-34 years:**

There has been mortality of 10.44% in this age group. It is 7.12% for males and 3.32% for females. Of the total institutional deaths of 6289 (4289 males and 2000 females) in this age group, the important causes of mortality in both the sexes are injury & poisoning (6.76%); infectious and parasitic diseases (18.91%); diseases of the circulatory system (8.55%); and symptoms, signs and abnormal clinical & laboratory findings n.e.c. (40.91%). About 3.91% women of this age group died due to burns whereas complication of pregnancy, childbirth and the puerperium are causing mortality of 0.70% amongst women, 1.86% by diseases of the respiratory system, 6.42% by external causes of morbidity and mortality.

### **Persons aged 35-44 years:**

There has been mortality of 10.80% in this age group. It is 7.87% for males and 2.93% for females. Of the total institutional deaths of 6509 (4743 males and 1766 females) in this age group, the important causes of mortality in both the sexes are infectious and parasitic diseases (18.34%) diseases of the circulatory system (11.75%); injury and poisoning (4.16%); and symptoms, signs and abnormal clinical & laboratory findings n.e.c. (40.54%), diseases of respiratory system (2.34%), diseases of digestive system (3.52%), external causes of morbidity and mortality (5.33%). About 0.75% women of this age group died due to burns.

### **Persons aged 45-54 years:**

Mortality of this age group has been 12.99%. It is 9.49% for males and 3.50% for females. Of the total institutional deaths of 7830 (5718 males and 2112 females) in this age group, the important causes of mortality in both sexes are diseases of the circulatory system (14.11%), infectious and parasitic diseases (14.34%), symptoms, signs and abnormal clinical & laboratory findings n.e.c. (41.40%), Injury & poisoning (2.68%), diseases of the respiratory system (3.92%), digestive system (3.51%), external causes of morbidity and mortality (3.30%).

**Persons aged 55-64 years:**

Mortality of this age group has been 13.38%. It is 9.13% for males and 4.25% for females. Of the total institutional deaths of 8064 (5499 are males and 2565 are females) in this age group, the important causes of mortality are diseases of the circulatory system (16.69%); symptoms, signs and abnormal clinical & laboratory findings n.e.c. (40.50%); and infectious and parasitic diseases (13.03 %), diseases of the respiratory system (5.26%).

**Persons aged 65-69 years:**

Mortality of this age group has been 6.17%. It is 3.97% for males and 2.20% for females. Of the total deaths of 3720 (2392 are males and 1328 are females) in this age group, the important causes of mortality are diseases of the circulatory system (16.34%); infectious and parasitic diseases (10.70%); and symptoms, signs and abnormal clinical & laboratory findings n.e.c. (44.30%), diseases of the respiratory system (5.59%).

**70 years and above:**

Mortality of this age group has been 14.22%. It is 8.94% for males and 5.28% for females. Of the total institutional deaths of 8570 (5386 males and 3184 females) in this age group, the important causes of mortality are diseases of the circulatory system (16.93%); and symptoms, signs and abnormal clinical & laboratory findings n.e.c. (45.82%), infectious and parasitic diseases (8.72%), diseases of the respiratory system (5.76%).

## Medical Certification of Cause of Death in States/UTs

The Registrar General, India and the World Health Organization have time and again stressed the need to have a better system of reporting of cause of death along with the death report. Delhi is one of the few States which has successfully implemented the scheme. Delhi ranks fourth at all India level behind Goa, Tripura and Manipur. During the period 1996-2006, in Delhi, on an average 57% of the deaths have taken place in hospitals and cause of death was reported in all the cases.

The Following table reflect the Percentage of MCCDeaths to Registered Deaths in different States & UTs.

**Statement No. 2.5 Percentage of MCCDeaths to Registered Deaths in States/ UTs**

S.No	Name of State/ UT	No.Of Registered Death		Percentage of MCCDeaths	
		1999	2000	1999	2000
		3	4	5	6
1	Andhara Pradesh	230,836	350,909	6.3	5.4
2	Arunachal Pradesh	1,941	1,670	50.3	43.7
3	Goa	10,188	9,891	91.7	94.1
4	Gujrat	211,203	225,650	3.2	2.9
5	Haryana	113,761	112,285	10.8	11.8
6	Himachal Pradesh	31,384	32,213	2.8	2.2
7	Karnataka	346,451	351,736	15.6	16.0
8	Karela	186,828	178,795	7.1	10.2
9	Madhaya Prdesh	462,965	295,008	4.9	7.5

## SECTION THREE

### Time series Analysis of Medically Certified Cause of Death

This Section is devoted to the analysis of trends in the deaths registered in Delhi during the period 1996 to 2006. This section also attempts an analysis of the trends in deaths due to specific causes like heart attack, cancer, tuberculosis, pneumonia and diabetic mellitus in Delhi during 1996-2006.

#### Medical Certification of deaths in retrospect (1996-2006)

During the period from 1996-2006, it was noticed that the level of hospital deaths in Delhi has varied between 52 to 61 percent. The lowest level i.e. 52% hospital deaths was reported during the year 2002. The maximum level of hospital deaths i.e. 61% was reported during 2006. The following table shows the percentage distribution of medical certification of cause of death i.e. the number of deaths taken place in hospitals

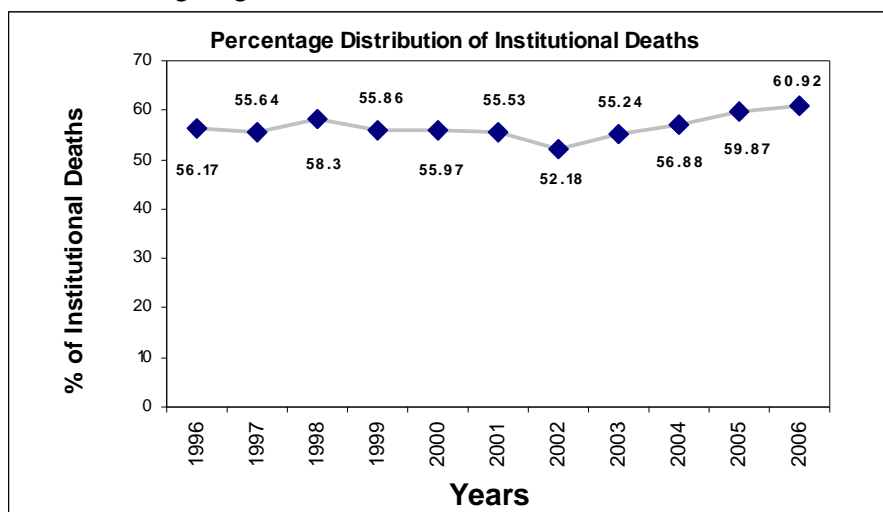

#### Statement No 3.1: Distribution of Institutional Deaths during pre and post MCCD notification Years

Year	Total Deaths	Institutional Deaths	Percentage
<b>A. Prior to Notification</b>			
1996	76103	42747	56.17
1997	71125	39572	55.64
1998	80405	46876	58.30
1999	78713	43972	55.86
2000	79858	44698	55.97
2001	81100	45034	55.53
2002	86176	44965	52.18
<b>B. After Notification</b>			
2003	87743	48473	55.24
2004	85378	48559	56.88
2005	94187	56390	59.87
2006	98908	60254	60.92

From the table, it is clear that the total no. of deaths in Delhi has increased from 76103 in 1996 to 98908 in 2006. However, deviating from the general trend, there was a comparative decrease in number of deaths during 1997, 1999 and 2004. The lowest number of deaths i.e. 71125 was reported in 1997 and the highest number i.e. 98908 was reported in 2006. Similarly the number of hospital deaths also increased from 42747 in 1996 to 60254 in 2006. However, in the intervening period, a mixed trend was observed as the number of hospital deaths has shown a decreasing trend in 1997, 1999 & 2002 and an increasing trend from the year 2002. The lowest number of hospital deaths i.e. 39572 was reported in 1997 and the highest number of hospital deaths i.e. 60254 was reported in 2006.

The following diagram will show the trend in institutional deaths in Delhi.

From the graph, it is clear that the percentage of institutional deaths has continuously increased after notification in July 2003 making it compulsory the MCCD in Delhi .

### Local Body wise Institutional Deaths

In the NCT of Delhi maximum number of deaths are registered in MCD area followed by NDMC and DCB. Similarly, in case of hospital deaths also the maximum number is reported by MCD followed by NDMC and DCB.

During the period from 1996 to 2006, out of the total 9,19,696 deaths hospital deaths are 5,21,540. Out of this, MCD has reported 3,29,682 number of deaths, NDMC 1,80,208 number of deaths and DCB 11,650 number of deaths. The hospital deaths are 57% of the total deaths occurred during the period. Out of this, MCD reported 63% of the deaths while NDMC has reported 35% of the deaths and DCB has reported 2% of the deaths.

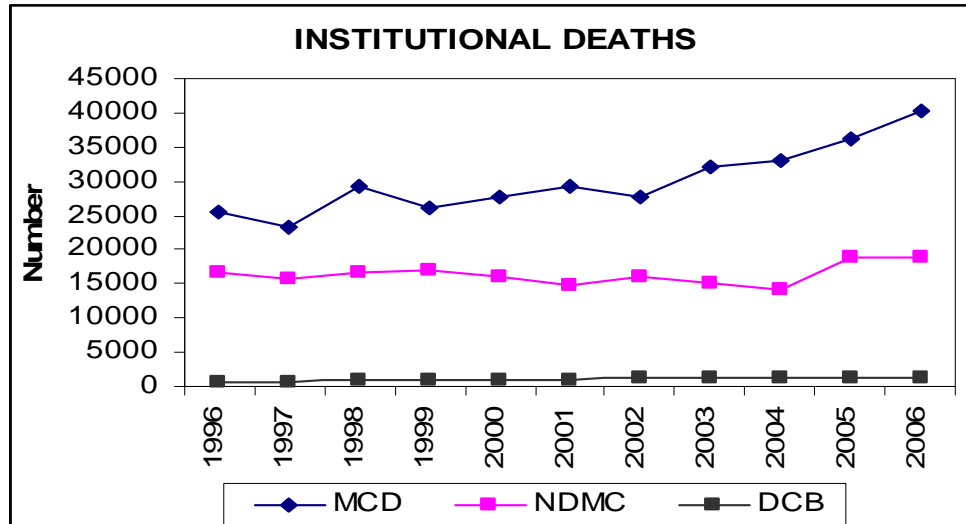

During the period 1996 to 2006, out of 5,21,540 institutional deaths 5,08,856(98%) has occurred in hospitals situated in urban area while 12,684(2%) institutional deaths has taken place in hospitals located in rural area. The following table shows the local body wise details of institutional deaths in Delhi during the period from 1996 to 2006.

### Statement No 3.2 Distribution of Institutional Deaths Local body wise

Institutional Deaths				
Year	MCD	NDMC	DCB	Total
1996	25347	16622	778	42747
1997	23206	15689	677	39572
1998	29235	16815	826	46876
1999	26203	16897	872	43972
2000	27593	16068	1037	44698
2001	29117	14866	1051	45034
2002	27632	16192	1141	44965
2003	31981	15195	1297	48473
2004	32892	14316	1351	48559
2005	36250	18744	1396	56390
2006	40226	18804	1224	60254

The institutional deaths reported by MCD has increased from 25347 in 1996 to 40226 in 2006 whereas number of institutional deaths in NDMC area increased from 16622 to 18804 during the same period and in DCB also the institutional deaths have increased from 778 to 1224. While the increase in number of institutional deaths in MCD is 59%, in NDMC it is 13% and in DCB it is 57%. This shows that number of patients undergoing hospital treatment at the time of death is increasing in Delhi.

The following diagram will make clear the trend on hospital treated deaths in MCD, NDMC and DCB areas.

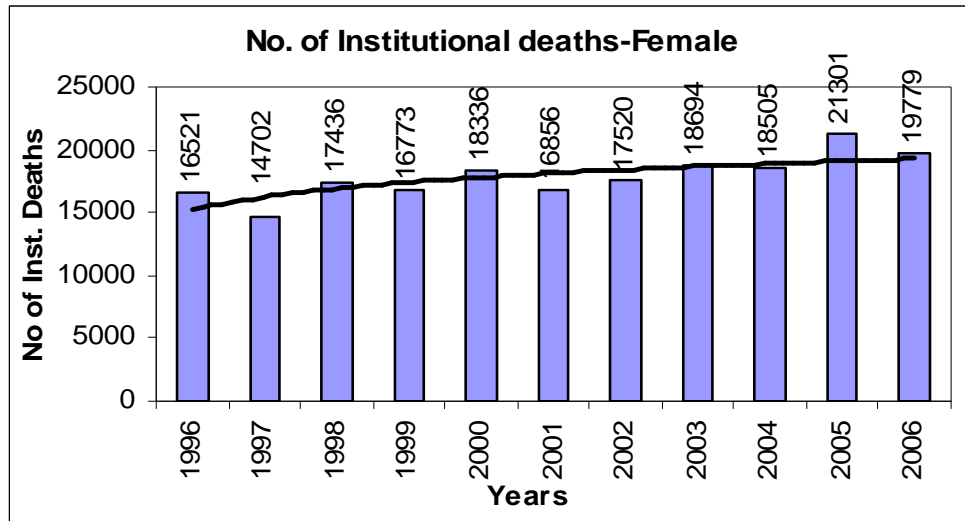

### Sex-wise and age-wise analysis of institutional deaths during 1996-2006

The following table shows the number of institutional deaths sex-wise during the period 1996-2006:

#### Statement No 3.3: Distribution of Institutional Deaths by sex

Year	Male	Female	Total
1996	26226	16521	42747
1997	24870	14702	39572
1998	29440	17436	46876
1999	27199	16773	43972
2000	26362	18336	44698
2001	28178	16856	45034
2002	27445	17520	44965
2003	29779	18694	48473
2004	30054	18505	48559
2005	35089	21301	56390
2006	40475	19779	60254

From the table, it is clear that during the period 1996-2006 the trend is of more male deaths compared to female deaths. The maximum difference in number of male deaths to female deaths has been noticed during the year 2006 whereas it is the minimum during the year 2000. It shows that the difference in male death to female death has varied between 105% to 44% during the period.

It is observed that during the said period both male institutional deaths as well as female deaths have an increase. The number of male deaths has increased from 26226 in 1996 to 40475 in 2006, whereas the female deaths increased from 16521 in 1996 to 19779 in 2006. Obviously, the percentage increase in number of male deaths is 54 % and it is 20 % in number of female deaths . The age-wise analysis of the institutional deaths will make the picture more clear. For the purpose of the study, 5 age-groups are taken into consideration i.e. 14 years and below, 15-24 years, 25-44 years, 45-64 years, 65 years and above. The following table shows the age group-wise proportion of institutional deaths.

### Statement No 3.4 : Distribution of Institutional Deaths age group wise:

year	% of MCCD deaths age group wise						
	14 &Below	15-24	25-44	45-64	65 & above	Age Not stated	ALL
1996	30.19	10.69	23.14	19.58	16.02	0.38	100.00
2000	19.81	5.60	13.76	24.88	25.99	9.96	100.00
2006	21.82	9.96	21.24	26.38	20.40	0.20	100.00

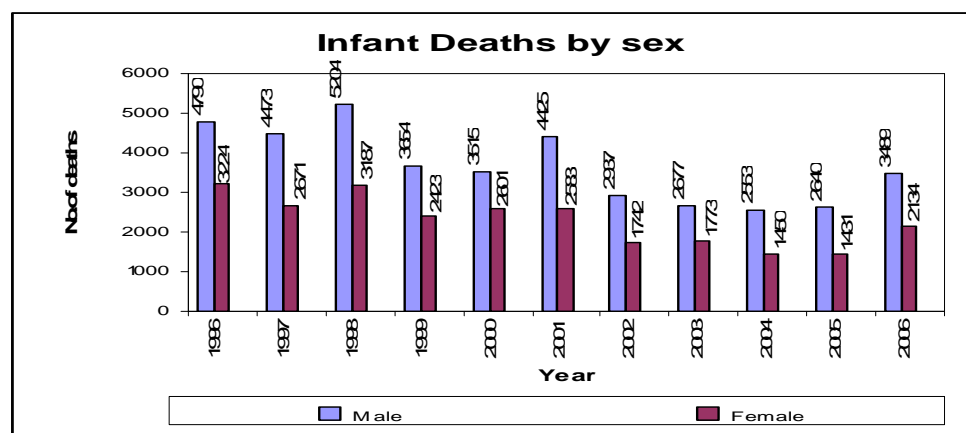

The age group wise analysis reflect that the percentage of number of deaths to total number of deaths has come down from 30.19% to 21.82% in the age group of 14 years & below during the period 1996-2006 whereas it has come down marginally in the age group of 15-24 years & 25-44 years . On the other hand, the percentage of number of deaths to total number of deaths has increased from 19.58 % to 26.38% in the age group of 45-64 years and 16.02% to 20.40% in the age group of 65 years & above.

### Institutional infant deaths during the period 1996-2006:

During the period 1996-2006, the institutional infant deaths has decreased considerably in Delhi. It has decreased from 8014 in 1996 to 5623 in 2006. The following table shows the institutional infant deaths sex wise.

### Statement No 3.5: Distribution of Institutional infant Deaths by sex

Year	Infant Deaths		
	Male	Female	Total
1996	4790	3224	8014
1997	4473	2671	7144
1998	5204	3187	8391
1999	3654	2423	6077
2000	3515	2601	6116
2001	4425	2583	7008
2002	2937	1742	4679
2003	2677	1773	4450
2004	2553	1450	4003
2005	2640	1431	4071
2006	3489	2134	5623

An analysis of the major causes of infant death shows that during the period 33.28% of the infant death has occurred due to slow foetal growth, foetal mal-nutrition and immaturity. All other signs causes in prenatal period account for 11.66% of the infant deaths. All other signs, symptoms and ill defined conditions have accounted for 13.33% of the total infant deaths. Septicemia, meningitis and pneumonia have accounted for 9.13%, 3.23% and 5.20% infant deaths respectively.

## Major causes of death during 1996-2006

### Institutional deaths due to heart attack and related heart diseases

During the period 1996-2006, 99118 deaths have taken place in Delhi due to heart attack and heart related diseases. Out of this 67236 are male deaths and 31882 are female deaths. Death due to heart attack and heart related diseases account for 10.78% of the total deaths in Delhi. It accounts for 11.74% of male deaths and 9.19% of female deaths.

Out of 99118 deaths 72875 ( 73.52% ) have taken place in hospitals while 26243 (26.48% ) have taken place in their homes. In case of males, 46880 ( 69.72% ) deaths have taken place in hospitals whereas in case of females 25995 (81.54% ) deaths have taken place in hospitals. Deaths due to heart attack varied from 8.40% to 14.84% during 1996-2006. The maximum number of 12669 deaths was reported in 2004 and the minimum number of 6216 deaths was reported in 1997.

#### Statement No 3.6: Institutional deaths due to heart attack and related heart diseases:

Year	Deaths due to heart attack	Deaths taken place in Hospital	Hospital death (in %age)
1996	7211	4977	69.02
1997	6216	4184	67.31
1998	10078	6865	68.12
1999	6613	4976	75.25
2000	7170	4798	66.92
2001	8136	6960	85.55
2002	11892	7266	61.10
2003	11721	9577	81.71
2004	12669	9976	78.74
2005	8576	6448	75.19
2006	8836	6848	77.50

The institutional deaths due to heart diseases varied between 61.10% to 85.55% during 1996-2006 . The maximum number of 9976 institutional deaths due to heart diseases was reported in 2004 whereas the lowest number of 4184 institutional deaths was reported in 1997.

Age group wise & Sex wise occurrence of deaths due to heart attack during 1996-2006 may be seen in the following table:

#### Statement No 3.7: Distribution of Institutional Deaths due to heart attack by sex & age group:

Age Group	Male	%age	Female	%age	Total	%age
14years & Below	3681	7.85	2207	8.49	5888	8.08
15-24	2415	5.15	1741	6.70	4156	5.70
25-44	8379	17.87	4420	17.00	12799	17.56
45-64	17001	36.27	7967	30.65	24968	34.26
65years & above	14534	31.00	9207	35.42	23741	32.58
Not stated	870	1.86	453	1.74	1323	1.82
Total	46880	100	25995	100	72875	100

The institutional deaths due to heart attack are the maximum in the age group of 45-64 years followed by 65 years & above age group and 25 to 44 years age group. During 1996-2006, 24968 persons died of heart attack in the age group of 45 to 64 years, 23741 in the age group of 65 years & above and 12799 in the age group of 25 to 44 years. In case of males the death due to heart attack is maximum in the age group of 45-64 years whereas in female it is maximum in the age group of 65 years and above. The occurrence of heart attack in males in the age group of 45-64 years is more than double than that of heart attacks in the same age group of females. 36% of the total heart attack deaths in males occur in the age group of 45-64 years.

## Institutional deaths due to Pneumonia

The following table shows the number of deaths due to pneumonia and deaths taken place in hospitals in Delhi during the period 1996-2006.

**Statement No 3.8: Institutional deaths due to Pneumonia :**

Year	Deaths due to Pneumonia	Deaths taken place in Hospital	Hospital death (in %age)
1996	1273	1132	88.92
1997	1269	1221	96.22
1998	1767	1732	98.02
1999	1458	1450	99.45
2000	1658	1608	96.98
2001	1205	1200	99.58
2002	2250	1956	86.93
2003	2182	1753	80.34
2004	1234	1119	90.68
2005	1503	1294	86.09
2006	868	810	93.32

The analysis of data reveals that the maximum number of 2250 deaths were reported in 2002 and the minimum number of 868 deaths were reported in 2006.

The institutional deaths due to Pneumonia varied between 80.34% to 99.58% during the 1996-2006. The maximum number of 1956 institutional deaths due to Pneumonia was reported in 2002 where as the lowest number of 810 institutional deaths was reported in 2006.

Age group wise & Sex wise occurrence of deaths due to Pneumonia during 1996-2006 may be seen in the following table:

**Statement No 3.9: Distribution of Institutional Deaths due to Pneumonia by sex & age group:**

Age Group	Male	%age	Female	%age	Total	%age
14 years & Below	4584	49.07	3200	53.94	7784	50.96
15-24	732	7.84	594	10.01	1326	8.68
25-44	1070	11.45	658	11.09	1728	11.31
45-64	1484	15.89	688	11.59	2172	14.22
65 & above	1233	13.20	690	11.63	1923	12.59
Not stated	239	2.55	103	1.74	342	2.24
Total	9342	100.00	5933	100.00	15275	100.00

The institutional deaths due to Pneumonia are the maximum in the age group of 14 years & below followed by 45-64 years age group and 65 years & above age group. During 1996-2006, 7784 persons died of pneumonia in the age group of 14 years & below, 2172 in the age group of 45-64 years and 1923 in the age group of 65 years & above. In case of males and females death due to Pneumonia is maximum in the age group of 14 Years & below This shows that the children i.e. 14 years & below age group are more affected by Pneumonia in Delhi, constituting more than half of the hospitals deaths due to Pneumonia.

## Institutional deaths due to Tuberculosis

The following table shows the deaths due to tuberculosis and deaths taken place in hospitals in Delhi during the period 1996-2006.

**Statement No 3.10: Institutional deaths due to Tuberculosis:**

Year	Deaths due to Tuberculosis	Deaths taken place in Hospital	Hospital death (in %age)
1996	4193	3430	81.80
1997	4286	3280	76.53
1998	5005	4064	81.20
1999	4335	3504	80.83
2000	4264	3358	78.75
2001	1881	1473	78.31
2002	4683	3554	75.89
2003	4924	3597	73.05
2004	2315	1987	85.83
2005	3618	3279	90.63
2006	3510	3064	87.29

The analysis of data reveals that the maximum number of 5005 deaths were reported in 1998 and the minimum number of 1881 deaths were reported in 2001.

The institutional deaths due to Tuberculosis varied between 73.05% to 90.63% during the 1996-2006. The maximum number of 4064 institutional deaths due to Tuberculosis were reported in 1998 where as the lowest number of 1473 institutional deaths were reported in 2001.

Age group-wise & Sex wise occurrence of Tuberculosis during 1996-2006 may be seen in the following table:-

**Statement No 3.11: Distribution of Institutional Deaths due to Tuberculosis by sex & age group**

Age Group	Male	%age	Female	%age	Total	%age
14 & below	1866	8.46	1838	14.66	3704	10.71
15-24	2136	9.69	2409	19.21	4545	13.14
25-44	6959	31.56	3836	30.59	10795	31.21
45-64	7068	32.05	2644	21.09	9712	28.08
65 & above	3825	17.35	1714	13.67	5539	16.01
Not stated	197	0.89	98	0.78	295	0.85
<b>Total</b>	<b>22051</b>	<b>100.00</b>	<b>12539</b>	<b>100.00</b>	<b>34590</b>	<b>100.00</b>

The institutional deaths due to Tuberculosis are the maximum in the age group of 25-44years followed by 45-64 years age group and 65 years and above age group. During 1996-2006, 10795 persons died of tuberculosis in the age group of 25-44 years, 9712 in the age group of 45-64 years and 5539 in the age group of 65 years and above. In case of males the death due to Tuberculosis is maximum in the age group of 45-64 years where as in females it is maximum in the age group of 25-44 years. The occurrence of Tuberculosis in males in the age group of 45-64 years is more than double than that of Tuberculosis in the same age group of females. 32.05% of the total Tuberculosis deaths in males occur in the age group of 45-64 years..

## Institutional deaths due to Cancer

The following table shows the details of deaths due to Cancer and deaths taken place in hospitals in Delhi during the period 1996-2006.

**Statement No 3.12: Institutional deaths due to Cancer:**

Year	Deaths due to Cancer	Deaths taken place in Hospital	Hospital death (in %age)
1996	2038	1243	60.99
1997	1991	1068	53.64
1998	876	868	99.09
1999	2172	1163	53.56
2000	2090	1374	65.74
2001	1117	977	87.47
2002	1552	871	56.12
2003	1489	948	63.67
2004	1533	1093	71.30
2005	2009	1545	76.90
2006	2060	1471	71.41

The analysis of data reveals that the maximum number of 2172 deaths were reported in 1999 and the minimum number of 876 deaths were reported in 1998.

The institutional deaths due to Cancer varied between 53.56% to 99.09% during 1996-2006. The maximum number of 1545 institutional deaths due to Cancer was reported in 2005 where as the lowest number of 868 institutional deaths was reported in 1998.

Age group wise & Sex wise occurrence of Cancer during the period 1996-2006 may be seen in the following table:-

**Statement No 3.13: Distribution of Institutional Deaths due to Cancer by sex & age group**

Age Group	Male	%age	Female	%age	Total	%age
14 & Below	628	8.56	316	5.98	944	7.48
15-24	500	6.81	254	4.81	754	5.98
25-44	1380	18.81	1225	23.19	2605	20.64
45-64	2676	36.47	2130	40.32	4806	38.08
65 & above	1865	25.41	1191	22.54	3056	24.21
Not stated	289	3.94	167	3.16	456	3.61
<b>Total</b>	7338	100.00	5283	100.00	12621	100.00

The institutional deaths due to Cancer are the maximum in the age group of 45-64years followed by 65 years and above age group and 25-44years age group. During 1996-2006, 4806 persons died of Cancer in the age group of 45-64years, 3056 in the age group of 65years & above and 2605 in the age group of 25-44years. In case of males and females, death due to Cancer is maximum in the age group of 45-64years.

## Institutional deaths due to Diabetic Mellitus

The following table shows the details of deaths due to Diabetic Mellitus and deaths taken place in hospitals in Delhi during the period 1996-2006.

**Statement No 3.14: Institutional deaths due to Diabetic Mellitus:**

Year	Deaths due to Diabetic Mellitus	Deaths taken place in Hospital	Hospital death (in %age)
1996	1144	946	82.69
1997	904	703	77.77
1998	814	682	83.78
1999	1064	752	70.68
2000	991	596	60.14
2001	620	586	94.52
2002	657	591	89.95
2003	757	640	84.54
2004	782	640	81.84
2005	1133	1052	92.85
2006	5296	5118	96.64

The above data reflect that the maximum number of 5296 deaths were reported in 2006 and the minimum number of 620 deaths were reported in 2001. The institutional deaths due to Diabetic mellitus varied between 60.14% to 96.64% during the period 1996-2006. The maximum number of 5118 institutional deaths due to Diabetic Mellitus was reported in 2006 where as the lowest number of 586 institutional deaths was reported in 2001.

Age group wise & Sex wise occurrence of Diabetic Mellitus during 1996-2006 may be seen in the following table:-

**Statement No 3.15: Distribution of Institutional Deaths due to Diabetic Mellitus by sex & age group**

Age Group	Male	%age	Female	%age	Total	%age
14 & Below	962	13.75	716	13.48	1678	13.64
15-24	298	4.26	220	4.14	518	4.21
25-44	779	11.14	629	11.84	1408	11.44
45-64	2697	38.56	1880	35.40	4577	37.19
65 & above	2184	31.22	1823	34.33	4007	32.56
Not stated	75	1.07	43	0.81	118	0.96
<b>Total</b>	6995	100.00	5311	100.00	12306	100.00

The institutional deaths due to Diabetic Mellitus are the maximum in the age group of 45-64 years followed by 65 years & above age group . During 1996-2006, 4577 persons died of diabetic Mellitus in the age group of 45-64 years, 4007 in the age group of 65 years & above and 1408 in the age group of 25-44 years. In case of males and females death due to Diabetic Mellitus is maximum in the age group of 45-64 years.

### Institutional Burns deaths by Age and Sex

Institutional deaths from burns for the period 1991-2006 are given in the following table:-

**Statement No 3.16: Distribution of medically certified Deaths due to burns by sex and age group**

Year	14 & Below		15-24 Years		25-44 Years		45-64 Years		65 & Above		Total		
	M	F	M	F	M	F	M	F	M	F	M	F	Total
1	2	3	4	5	6	7	8	9	10	11	12	13	14
1991	93	82	166	385	249	492	59	54	13	24	580	1037	1617

2001	81	85	119	224	191	334	47	45	45	58	483	746	1229
2002	27	33	57	100	84	132	28	24	32	58	228	347	575
2003	32	35	37	45	54	132	28	24	32	58	183	294	477
2004	44	37	69	158	122	155	33	18	4	4	272	372	644
2005	76	65	104	207	177	229	73	60	31	42	461	603	1064
2006	57	52	114	149	193	180	68	39	20	10	453*	430	883
Total	818	894	1257	3254	2444	3792	612	565	570	738	5702	9243	14945

\* in case of one male death age has not been stated

During the period 1991 to 2006 total burn deaths in Delhi is 14945. Out of which 5702 are male deaths and 9243 are female deaths. The female burn death is much higher than that of the male burn deaths.

During the period 1991 to 2006, maximum number of burn deaths i.e. 1647 was reported in the year 1994 and the least number of burn deaths i.e. 214 was reported in the year 1996. The maximum number of male burn deaths i.e. 607 was reported during 1995 and female burn deaths i.e. 1073 was reported during 1994. During the years 1991, 1993, 1994 and 1995 the total burn deaths have remained more than 1500.

The age-wise analysis of the deaths due to burn shows that the maximum number of burn deaths has taken place in age group of 25 to 44 years followed by 15-24 years and in both the age groups, the number of female deaths are much higher than the male deaths. The burn deaths in the age group of 25-44 years account for 41.59% institutional burn deaths and the age group of 15-24 years accounts for 30.08% institutional burn deaths. The burn deaths are the least in the age group of 45-64 followed by the age group of 65 years and above, except the exception of year 2000, when the maximum number of burn deaths has taken place in the age group of 65 and above. The burn deaths in the age group 45-64 and 65 and above account for 16.63% of total institutional burn deaths. The death of children in the age of 14 years & below due to burn works out to 11.46% of the total institutional burn deaths.
