## PREFACE

*The Present Report on “Household Consumer Expenditure in Delhi” is brought out by this Directorate on the basis of sample survey conducted under the 57<sup>th</sup> NSS(2001-2002) round. This is an annual survey held along with unorganized Service sector enterprises survey, in a small sample in order to bridge the data gap between two quinquennial surveys.*

*This report contains valuable data on consumption levels and pattern of households in Delhi. The report also provides information on the main demographic features like literacy, social-group, marital status, occupational distribution, and other aspects of living conditions like, source of energy for cooking/lighting, dwelling type covered area, ownership type, type of structure etc. and off-take from PDS. Brief profile of Employment & Unemployment in Delhi was also included in the report. The data available from the report will be useful for policy makers in both government departments and other public and private institutions.*

*This report was prepared by the Data Processing & Analysis Unit of this Directorate under the able guidance of Sh. N.T.Krishna, Assistant Director. The extraordinary efforts put in by Sh. Harmeet Singh Maddh, Statistical Investigator, in the data analysis and report making stages deserves special mention. The role played by socio-economic unit in collection of data from the field against all odds is appreciated. The data processing was done by the EDP unit under the close guidance of Sh. K.S.Bansal, Programmer.*

*The technical assistance provided by National Sample Survey Organisation, Government of India and the co-operation extended by the households is acknowledged.*

# **HOUSEHOLD CONSUMER EXPENDITURE IN DELHI**

## **EXECUTIVE SUMMARY**

The following are the main highlights of the survey conducted during NSS 57<sup>th</sup> round between July 2001 and June 2002.

### **DEMOGRAPHIC FEATURES**

- ❖ Estimated number of households in Delhi was about 31.13 lakh, and out of which of which 2.21 lakh were in rural and 28.92 lakh in urban areas.
- ❖ Average household size in rural, urban and Delhi worked out to 4.31, 4.50 and 4.48 persons per household respectively.
- ❖ More than 72% of the total population in Delhi were in MPCE (Rs.) class of 775 and above, 27.47% in 300-775 class and the remaining in less than 300 class.
- ❖ Of the total households, 15.88% belong to 'Scheduled Caste', 8.87% Other backward classes and 75.25% to other social groups.
- ❖ 5.62% of the total families in Delhi were having female as head of the household.
- ❖ Among females, 48.41% were currently married, 4.94% widowed and 0.26% divorced/separated.
- ❖ 84.81% of the population were literate with different levels of educational attainment.
- ❖ 90.67% of males and 77.82% of females in Delhi were literate.
- ❖ Occupational distribution of the households revealed that, 32.79% were self-employed, 51.16% regular wage/salaried, 4.65% casual labour, only 0.33% agriculture labour and rest of 11.07 % engaged in other avocations.

### **FEATURES ON LIVING CONDITIONS**

- ❖ 30.47% families live in dwellings with an average covered area ranging from 30-60 square meters, 25.82% in covered area above 60 square meters and 17.75% in dwellings with covered area of 20-30 square meters.
- ❖ 61.41% of dwellings were estimated to be owned, 31.52% rented and 7.07% in other category.

- ❖ 70.30% of the households were residing in Independent houses, 20.31% in flats and 9.39% in Chawl type of dwelling.
- ❖ 90.18% were living in Pucca Structure, 6.87% in semi-pucca and 2.95% in Kutcha structure.
- ❖ 74.78% households were using LPG, 19.56% Kerosene, 1.03% Dung cake, 1.69% firewood as the primary source of cooking in Delhi.
- ❖ 98.46% of the total households were dependent on Electricity for their lighting needs.

## **EMPLOYMENT&UN-EMPLOYMENT**

- ❖ **Labour Force Participation Rate :** Out of every 1000 persons (15+ age) in the population **485** were in labour force in Delhi. In respect of males it was 834 persons and that of females was only 96 persons per 1000 persons in this age group.
- ❖ **Work Force Participation Rate :** Out of every 1000 persons (15+ age) in the population **455** persons were actually working in Delhi
- ❖ **Un-Employment Rate :** Out of every 1000 persons (15+ age) in the labour force 62 persons were in un-employed category.

## **CONSUMER EXPENDITURE**

- ❖ Monthly per capita expenditure (Rs.) was highest in Delhi both in rural and urban among states/Uts.
- ❖ Average monthly per capita expenditure of Delhi worked out to Rs.1408.32.
- ❖ Rs.531.64 (37.75%) was spent on food items and Rs.876.68 (62.25%) on non-food items.
- ❖ Average monthly consumer expenditure per family was estimated as Rs.6302.98.
- ❖ Major heads of expenditure: Miscellaneous consumer services accounted for 23.03%, Milk and Milk products 11.19%, Conveyance 9.71% cereals 5.96%, rent 6.01%, clothing 5.06%, fuels & lighting 6.88%, education 7.25%, beverages 5.90% of the MPCE.
- ❖ Per Capita monthly consumption of Cereals in rural and urban Delhi was 9.99 Kgs and 8.52 Kgs respectively.
- ❖ Out of the total purchases 95.97% of rice, 98.25% of wheat/atta 91.10% of the sugar was purchased from open market.

## **SECTION ONE**

### **INTRODUCTION**

**S**urvey of household consumer expenditure provides the first and the foremost indicator of human living standard namely monthly per capita consumption expenditure (MPCE). It also brings to light inter-state and rural-urban variation in consumption of cereals, which is the most important constituent of Indian diet. This survey has multiple features to satisfy the thirst of various data user agencies despite the complexities involved in the collection of data. That is the reason why this survey has come to stay as a regular component of NSS rounds.

This survey is now conducted in two different ways, namely every five years with a much larger sample and annually with a relatively thin sample size. Household consumer expenditure survey conducted during NSS 57<sup>th</sup> round (July 2001 – June 2002) was an annual survey by integrating it with the enterprise survey on un-organised service sector. By the end of NSS 57<sup>th</sup> round 6 quinquennial surveys on this subject were conducted by NSSO namely 27<sup>th</sup> (1972-73), 32<sup>nd</sup> (1977-78), 38<sup>th</sup> (1983), 43<sup>rd</sup> (1987-88), 50<sup>th</sup> (1993-94) and 55<sup>th</sup> (1999-2000). The annual series started from the NSS 42<sup>nd</sup> round (1986-87). The current NSS 57<sup>th</sup> round is thirteenth in this series.

### **OBJECTIVE SCOPE & COVERAGE**

The main objective of the survey was to ascertain the level and pattern of household consumer expenditure and also provide necessary data to the researchers for conducting further studies on poverty line, nutritional status, sufficiency of food etc. The

household consumer expenditure refers to the expenditure incurred by a household on domestic consumption during the reference period. It is the total monetary value of consumption of various groups of items i.e. food, fuel, light, clothing, footwear, miscellaneous goods & services and durable articles. The reference period used during the survey for collection of data on consumer expenditure varied for different items. For items of food, pan, tobacco & intoxicants, fuel & light and miscellaneous goods and services including medical (non-institutional), rents and taxes, data were collected for the reference period of 'last 30 days' preceding the date of survey. Information for items of clothing, footwear, education and medical (institutional) expenses and durable goods was collected for the reference period of 'last 365 days' preceding the date of survey. Hence information gathered covers the sum of monetary value of all the items (i.e. goods & services) consumed by the household on domestic account during the reference period. The expenditure incurred towards the productive enterprises of the household is excluded from household consumer expenditure. Besides the consumer expenditure, information on population features, status of living conditions and employment & unemployment situation was also collected.

## **PLANNING OF FIELDWORK**

During the 57<sup>th</sup> NSS round, data was collected by the field staff of the Directorate under the supervision of field officers. The data was collected through pre-designed schedules on door-to-door basis by adopting the personal interview technique. To elicit co-operation from informants, wide publicity was given about the purpose of survey.

## **SCHEME OF THE REPORT**

The report is presented in five sections. Section two and three dealt with ‘sample design and estimation procedure’ and ‘conceptual framework’ respectively. Section four exhaustively dealt with the demographic characteristics, and level and pattern of household consumer expenditure in Delhi. Detailed statistical tables are given in section five.

## SECTION TWO

# SAMPLE DESIGN AND ESTIMATION PROCEDURE

The fifty-Seventh round was of one-year duration starting from 1<sup>st</sup> July 2001 and ending on 30<sup>th</sup> June 2002. One-year period was further sub- divided into four sub-rounds as given below:

SUB ROUND	PERIOD
1	JULY – SEPTEMBER 2001
2	OCTOBER – DECEMBER 2001
3	JANUARY – MARCH 2002
4	APRIL – JUNE 2002

### SCHEDULES OF ENQUIRY:

The following Table lists the schedules of enquiry for the NSS 57<sup>th</sup> Round:

Srl. No.		
1.	0.0	List of households and non-agricultural enterprises
2.	2.345	Unorganised Services (Excluding Trade & Finance)
3.	1.0	Household Consumer Expenditure

### SAMPLE DESIGN

A stratified two-stage/three-stage sample design has been adopted in this round. The first stage units were villages (as per 1991 census) in the rural sector and the NSSO urban frame survey (UFS) blocks in the urban sector. For consumer expenditure and employment-unemployment survey, households were the USUs as usual in both the sectors.

## STRATIFICATION

**RURAL:** In the rural sector, each district was divided into three sub-strata as under

Sub-stratum 1: FSUs with no unorganized manufacturing enterprises

Sub-stratum 2: FSUs with atleast one DME in the unorganized sector

Sub-stratum 3: Remaining FSUs

**URBAN:** In the urban sector, strata were formed, within each NSS region by grouping towns on the basis of the population size class of towns. Stratification adopted for state sample (Delhi) is given in table below:

STRATUM NO.	COMPOSITION OF STRATA ( Population as per 1991 Census)
1	All towns with P less than or equal to 50000
2	All towns with P more than 50000 but less than 100000
3	All towns with P more than 100000 but less than 500000
5	Each town with P more than 1000000

Note : P stands for population of 1991 Census

Within each stratum three sub-strata were formed, as under:

Sub-stratum 1: FSUs with no unorganized manufacturing enterprises

Sub-stratum 2: FSUs with atleast one DME in the unorganized sector

Sub-stratum 3: Remaining FSUs

### ALLOCATION BETWEEN RURAL AND URBAN SECTORS:

The allocation of FSUs between rural and urban sectors were made in proportion to the number of workers engaged in unorganised non-agricultural enterprises as per Economic Census 1998 with 1.5 weightage to urban sector.

### ALLOCATION AMONG STRATA/SUB-STRATA:

The allocation to strata/sub-strata in both rural and urban sectors were made in proportion to the number of workers engaged in unorganised non-agricultural enterprises as per Economic Census 1998.

### SELECTION OF FSUs:

For sub-stratum 1 of each stratum in rural and urban sectors, FSUs were selected by simple random sampling without replacement (SRSWOR). For all other sub-strata in both rural and urban sectors FSUs have been selected circular systematically (CSS) with probability proportion to size (PPS), size being the number of manufacturing workers in the unorganised sector as per economic census 1998. Samples have been drawn in the form of two independent sub-samples separately for rural and urban sectors. For uniform spread of fieldwork over the survey period all the sample FSUs pertaining to the State of Delhi have been arranged first by stratum and then each stratum by sub-stratum and each sub-stratum by sub-sample and then sub-round number were assigned against sample FSUs in the sequence 1,2,3,4.

### FORMATION OF HAMLET-GROUPS/SUB-BLOCKS:

Depending upon the values of approximate Present Population (P) and approximate total number of non-agricultural enterprises (E), decision is taken to divide the FSU into a fixed number of hamlet groups (hg's –term applicable for rural samples)/sub-blocks(sb's the term applicable for urban samples)as per the rules given below:

POPULATION CRITERIA		ENTERPRISE CRITERIA	
Approximate Present Population of fsu's (Value of P)	No. of Hamlet Groups/Sub-Blocks Formed (D)	Approximate Present No. of Non-Agricultural Enterprises in the fsu's (Value of E)	No. of Hamlet Groups/Sub-Blocks Formed (D)
0- 1200	1	0 – 120	1
1201 – 1600	4	121 – 160	4
1601 – 2000	5	161 – 200	5
2001 – 2400	6	201 – 240	6
And so on			

Note: Number of hg's/sb's = '1' means the whole FSU is considered for listing.

At the outset the number of hamlet groups/sub-blocks (value of 'D') to be formed was decided on the basis of higher value of 'D' among the two criteria.

Three hg's/ sb's were selected – one with the maximum number of DMEs (or with maximum number of NDMEs if there was no DME or with maximum number of

OAMEs if there was no DME/NDME in the FSU) or with maximum percentage share of population if there was no manufacturing enterprise in the entire FSU, were selected and termed as **Segment 1** ; other two have been selected circular systematically with equal probability and combined to form **Segment 2**.

## ESTIMATION PROCEDURE

### NOTATIONS:

The following notations were used in the formulae for estimation.

$s$  = subscript for  $s$ -th stratum.

$t$  = subscript for  $t$ -th sub-stratum ( $t = 1, 2$  or  $3$ )

$m$  = subscript for sub-sample ( $m = 1, 2$ )

$i$  = subscript for  $I$ -th village/block (FSU).

$1$  = subscript for segment 1

$2$  = subscript for segment 2

$k$  = subscript for  $k$ -th sample household.

$D$  = total number of hamlet-groups/sub-blocks formed in the sample Village/block.

$Z$  = total size of a stratum/sub-stratum.

$z$  = size of village/block used for selection.

$n$  = number of sample Village/blocks surveyed including zero cases for a particular sub-sample.

$\pi$  = inclusion probability for the sample FSU's of sub-sample 1.

$\pi'$  = inclusion probability for the sample FSU's of sub-sample 2 given sub-sample 1.

$H$  = total number of households listed in a segment of FSU.

$h$  = total number of households surveyed in a segment of sample FSU.

$x, y$  = observed value of characters  $X, Y$  under estimation.

$\hat{X}, \hat{Y}$  = estimated value of characteristic  $y$  obtained from the sample.

## FORMULAE FOR ESTIMATION

a) Estimation formula for stratum 9:

$$\hat{Y} = \sum_{i=1}^N \left[ \frac{H_{i1}}{h_{i1}} \sum_{l=1}^{h_{i1}} y_{i1l} + D_i^* \frac{H_{i2}}{h_{i2}} \sum_{l=1}^{h_{i2}} y_{i2l} \right]$$

(t = 1; m = 1, 2)

b) Estimation formula for general strata:

1) For sub-sample 1:

$$\hat{Y}_m = \sum_{i=1}^{n_m} \frac{1}{\pi_{mi}} \left[ \frac{H_{i1}}{h_{i1}} \sum_{l=1}^{h_{i1}} y_{i1l} + D_i^* \frac{H_{i2}}{h_{i2}} \sum_{l=1}^{h_{i2}} y_{i2l} \right]$$

(m = 1)

(b) For sub-sample 2:

$$\hat{Y}_m = A + B$$

(m = 2)

Where

$$A = \sum_{i=1}^{n_m} \left[ \frac{H_{i1}}{h_{i1}} \sum_{l=1}^{h_{i1}} y_{i1l} + D_i^* \frac{H_{i2}}{h_{i2}} \sum_{l=1}^{h_{i2}} y_{i2l} \right]$$

( m = 1)

and

$$B = \sum_{i=1}^{n_m} \frac{1}{\pi'_{mi}} \left[ \frac{H_{i1}}{h_{i1}} \sum_{l=1}^{h_{i1}} y_{i1l} + D_i^* \frac{H_{i2}}{h_{i2}} \sum_{l=1}^{h_{i2}} y_{i2l} \right] \quad (m = 2)$$

(ii) For sub-stratum 11 :

$$\hat{Y}_m = \frac{N}{n_m} \sum_{i=1}^{n_m} \left[ \frac{H_{i1}}{h_{i1}} \sum_{l=1}^{h_{i1}} y_{i1l} + D_i^* \frac{H_{i2}}{h_{i2}} \sum_{l=1}^{h_{i2}} y_{i2l} \right] \quad (m = 2)$$

(c) Estimate for the  $S^{\text{th}}$  stratum

$$\hat{Y}_{sm} = \sum_{t=1}^{11} \hat{Y}_{stm} \quad (m = 1, 2)$$

(iv) Combined Estimates for Aggregate:

Overall estimate for aggregates for a sub-stratum (denoted by  $\hat{Y}_{st}$ ) based on two samples was obtained as Combined estimate of two sub samples is obtained as:

$$\hat{Y}_{st} = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{stm}$$

and that for a general stratum (denoted by  $\hat{Y}_s$ ) was .

$$\hat{Y}_s = \sum_{t=1}^{11} \hat{Y}_{st}$$

(v) Combined Estimate of aggregates for State/UT:

The combined estimates were obtained by summing the statum estimates over all the strata belonging to the state/UT.

\*\*\*

## SECTION THREE

# CONCEPTUAL FRAMEWORK

The concepts and definitions adopted during the NSS 57<sup>th</sup> round are explained in this section.

**HOUSE:** Every structure, tent, shelter, etc., is a house irrespective of its use. It may be used for residential or non-residential purpose or both or even may be vacant.

**HOUSEHOLD:** A group of persons normally living together and taking food from common kitchen constitute a household. The word 'normally' means that the temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in hostel for studies is excluded from household of his/her parents, but a resident employee or resident servant or paying guest (but just not a tenant in the house) is included in the employers/host's household. 'Living together' is usually given more importance than 'sharing food from a common kitchen' in drawing the boundaries of a household. In case the two criteria are in conflict; however in special case of person taking food with his family but sleeping elsewhere (say, in shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of mess, hotel, boarding house, etc. is considered as single member household but a family living in a hotel is considered to be one household only; the same applies to residential staff of such establishments.

**HOUSEHOLD SIZE:** The number of normally resident members of a household is its size. It will include temporary stayaways but exclude temporary visitors and guests.

**HOUSEHOLD CONSUMER EXPENDITURE:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary value of consumption of various groups of items namely:

- i) food, pan(betal leaves), tobacco, intoxicants and fuels and light.

- ii) clothing and footwear; and
- iii) miscellaneous goods and services and durable articles.

For group (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during reference period, The consumption may be out of :

- a) purchase made during the reference period or earlier.
- b) home grown stock.
- c) receipt in exchange of goods and services.
- d) any other receipt like gift, charity, borrowings; and
- e) free collection.

For evaluating the consumption of the items of group (iii) i.e. items categorised as miscellaneous goods and services and durable articles, a different approach is followed, In this case, the value of actual purchase i.e., the expenditure made during the reference period for the purchase of goods and services is considered as consumption.

It is pertinent to mention here that the consumer expenditure for a household on food items relate to the actual consumption made by the normal resident member of the household and also by the guests during the ceremonies otherwise. To avoid double counting, transfer payments like charity, loan advances, etc. made by the households are not considered as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item "cooked meals" is an exception to the rule. Meals prepared in that household kitchen and provided to the employees and/or other would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to the employees or the others. Thus, to avoid double counting, cooked meals received, as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for the consumption of the normal resident members and for the guest and employees will also be recorded in the purchaser household.

This procedure of recording cooked meals served to others in the expenditure of serving households only leads to bias free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite direction over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat

understated for the poor(net recipients). This point has to be kept firmly in mind while using the NSS consumer expenditure data for any nutritional studies.

**TOTAL HOUSEHOLD EXPENDITURE:** The total household expenditure is composed of expenditure of the household on broad group of items. The groups are:

- (1) Cereals
- (2) Gram
- (3) Cereals substitutes
- (4) Pulses & pulse products
- (5) Milk & Milk Products
- (6) Edible Oil
- (7) Meat, Egg and Fish
- (8) Vegetables
- (9) Fruits (Fresh and dry)
- (10) Sugar
- (11) Salt
- (12) Spices
- (13) Beverages, refreshments and processed food
- (14) Pan, tobacco and intoxicants
- (15) Fuel and light
- (16) Clothing
- (17) Footwear
- (18) Miscellaneous goods and services
- (19) Durable goods
- (20) Rent
- (21) Taxes and cesses
- (22) Medical: (institutional and non-institutional)
- (23) Education

The results of total household consumer expenditure expressed are broadly classified under (a) Food total and (b) Non-food total.

**VALUE OF CONSUMPTION:** Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex factory prices. Value of consumption out of gifts, loans, free collection and goods received in exchange of goods and service is imputed at the rate of average local retail prevailing during the reference period.

**MONTHLY PER CAPITA CONSUMER EXPENDITURE (MPCE) :** For a household, this is its 30 day's consumer expenditure divided by its size. A person's MPCE is understood as that of the household to which he or she belongs.

**REFERENCE PERIOD:** The reference periods used for collection of consumption data for different groups of items are given below:-

- Food, pan, tobacco and intoxicants, fuel & light, Miscellaneous goods & services, and medical care (non-institutional) – last 30 days
- Education, medical care (institutional), clothing footwear and durable goods – last 365 days

**MILK AND MILK PRODUCTS:** This includes ghee, butter, curd, ice-cream etc. Milk-based sweetmeats (pera, rasogolla etc.) come under “beverages, refreshments and processed food”. However, if these are prepared from milk, sugar, etc. within the household and consumed, then the consumption of ingredients are accounted separately instead of the entire consumption being accounted under “milk products”. Clothing and footwear: This category includes bed sheets, bedcovers, pillows, curtains, mattresses, blankets, rugs, mats and mattings, cotton yarn, wool and knitting wool. It, however, excludes tailoring charges, which come under “miscellaneous goods and services”.

**MISCELLANEOUS GOODS AND SERVICES:** This is a residual group containing items other than goods, pan, tobacco, intoxicants, fuel and light, clothing, footwear, rent, taxes and durable goods.

**INSTITUTIONAL AND NON-INSTITUTIONAL MEDICAL EXPENSES:** The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred for medical treatment undergone as an in-patient of a medical institution (such as a hospital or nursing home) or otherwise. Medical expenses include expenditure on medicines and medical goods including family planning appliances, payment made for medical treatment, and expenses incurred for clinical tests.

**DURABLE GOODS:** Items included here are distinguished from miscellaneous goods by having a longer expected lifetime of use (roughly, one year or more). Expenditure incurred on repairs and construction of durable used for domestic purpose is included in ‘expenditure on durable goods’.

**PUCCA STRUCTURE:** A pucca structure is one whose walls and roof are made of pucca materials as cement, concrete, oven burnt bricks, hollow cement / ash bricks, stone, stone blocks, jack boards (cement plastered reeds), iron, zinc or other metal sheets, timber, tiles, slate, corrugated iron, asbestos cement sheet, veneer, plywood, artificial wood of synthetic material and ploy vinyl chloride(PVC) material.

**KATCHA STRUCTURE:** A structure, which has walls and roof made of non-pucca materials, is regarded as a katcha structure. Non-pucca materials include unburnt bricks, bamboo, mud, grass, leaves, reeds, thatch, etc. Katcha structures can be of the following two types:

**UNSERVICEABLE KATCHA STRUCTURE** includes all structures with thatch walls and thatch roof i.e. walls made of grass, leaves, reeds, etc. and roof of a similar material and

**SERVICEABLE KATCHA STRUCTURE:** includes all Katcha structure other than Unserviceable Katcha structure.

**SEMI-PUCCA STRUCTURE:** A structure, which cannot be classified as a pucca, or a katcha structure as per definition is a semi-pucca structure. Such a structure will have either the walls or the roof but not both, made of pucca materials.

**BUILDING:** Building is a free-standing structure comprising one or more rooms or other spaces covered by a roof and usually enclosed within external walls or dividing walls which extend from the foundation to the roof. Dividing walls refer to the walls of adjoining buildings, i.e. dividing walls of a row of houses. These houses are practically independent of one another and likely to have been built at different times and owned by different persons. If more than one physically separated structure constitute one living unit, all of them together also form a building. Usually, building will have four external walls. But in some areas the nature of building construction is such that it has no walls. Instead, it has a roof, which almost touches the ground, and it is provided with entrance. Such structures and also structures standing only on pillars will also be treated as building for the purpose of the survey.

**DWELLING UNIT:** It is the accommodation availed of by a household for its residential purpose. It may be an entire structure or a part thereof or consisting of more than one structure. There may be cases of more than one household occupying a single structure such as those living in independent flats or sharing a single housing unit, in each case, there will be as many dwelling units as the number of households sharing the structure. There may also be cases of one household occupying more than one structure (i.e. detached structures for sitting sleeping, cooking, bathing etc) for its housing accommodation. In this case, all the structure together constitutes a single dwelling unit. In general, a dwelling unit consists of living room, kitchen, store, bath, latrine, garage, open and closed veranda etc. A structure or a portion thereof used exclusively for non-residential purposes or let out to other households does not form part of the dwelling unit of the household under consideration. However, a portion of a structure used for both residential and non-residential purposes is treated as part of the dwelling unit except when the use of such portion for residential purpose is very nominal. The dwelling unit covers all pucca, semi-pucca and katcha structures used by a household. Households living more or less regularly under bridges, in pipes, under staircase, in purely temporary flimsy improvisations built by the road side (Which are liable to be removed at any moment) etc., are considered to have no dwelling.

**CHAWL/BUSTEE:** A chawl/bustee is a collection of huts (thatched houses) or tenements which is generally constructed of katcha or semi-pucca materials like mud, bamboo, grass, leaves, reeds, thatch, unburnt bricks etc., and is inhabited by a large number of households.

**INDEPENDENT HOUSE:** An independent house is one, which has a separate structure and entrance with self-contained arrangements. In other words, if the dwelling unit and the entire structure of the house are physically the same, it should be considered as an independent house. In some parts, particularly in rural areas, two or more structures together may constitute a single housing unit. While the main residence may be in one of the structures, the other structures may be used for sleeping, sitting and for store, bath etc. In all such cases, all the structures together will form a single housing unit and will be treated as an independent house.

**FLAT:** A flat, generally, is a part of the building and has one or more rooms with self-contained arrangement and normal housing facilities like water supply, latrine, toilet, etc., which are used exclusively by the household residing therein or jointly with other households. It also includes detached room or rooms with or without other housing facilities.

**ECONOMIC ACTIVITY:** Any activity resulting in production of goods and services that add value to national product was considered as an economic activity. Such activities included production of all goods and services for market(i.e. production for pay or profit) and non market activities such as production of primary commodities for own consumption and own account production of fixed assets. Activities like prostitution, begging, smuggling etc., which though fetched earnings were, by convention, not considered as economic activities.

**ACTIVITY STATUS:** It is the activity situation in which a person was found during a reference period with regard to the persons's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period.

- i) Working or being engaged in economic activity(work) as defined above,
- ii) Being not engaged in economic activity(work) but either making tangible efforts to seek 'work' or being available for 'work' if the work is available and
- iii) Being not engaged in any economic activity(work)and also not available for 'work'.

Broad activity status mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employment' and 'unemployment', respectively.

**CATEGORIES OF ACTIVITY STATUS:** Identification of each individual into a unique situation could pose a problem when more than one of the three broad activity status listed above were concurrently obtained for a person. In such an eventuality, the identification uniquely under any one of the three broad activity status was done by adopting *either the major time or priority criterion*. The former was used for classification of persons according to the 'usual activity status' approach and the latter for classification of persons according to the 'current activity status' approach. Each of the three broad activity status was further subdivided into several detailed activity categories. If a person categorises as engaged in economic/non-economic activity by adopting one of the two criteria mentioned above was

found to be pursuing more than one economic/non-economic activity during the reference period, and the appropriate detailed activity status code related to the activity in which relatively more time had been spent. The detailed activity categories under each of the three broad activity statuses used in the survey along with the codes assigned to them (in brackets) are stated below:

i) Situation of working or being engaged in economic activities (employed):

- a) worked in household enterprise (self-employed) as own account worker(11);
- b) worked in household enterprise (self-employed) as employer(12);
- c) worked as helper in household enterprise (unpaid family worker)(21);
- d) worked as regular salaried/wage employee (31);
- e) worked as casual wage labour (i) in public works(41), (ii) in other types of work (51)
- f) had work in household enterprise but did not work due to : (i) sickness(61), (ii) other reasons (62); and
- g) had regular salaried/wage employment but did not work due to: (i) sickness(71), (ii) other reasons (72); and

(ii) Situation of being not engaged in work but seeking or available for work (un-employed):

- a) sought work (81) and
- b) did not seek but was available for work (82)

(iii) Situation of being not available for work (not in labour force):

- a) attended educational institutions (91);
- b) attended domestic duties only (92);
- c) attended domestic duties and was also engaged in free collection of goods(vegetables, roots, firewood, cattle-feed etc.) sewing, tailoring, weaving etc. for household use (93);
- d) rentiers, pensioners, remittance recipient, etc. (94);
- e) not able to work due to disability(95);
- f) beggars, prostitutes (96);
- g) others (97)and
- h) did not work due to sickness (for casual workers only) (98).

**WORKERS (OR EMPLOYED):** Persons who are engaged in any economic activity or who despite their attachment to economic activity, abstained from work for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non-farm activities were also considered as workers. All the workers were assigned one of the detailed activity statuses under the broad activity category ‘working’ or ‘being engaged in economic activity’ (or employed).

**SEEKING OR AVAILABLE FOR WORK (OR UNEMPLOYED):** Persons, who are owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were ‘seeking or available for work’ (or unemployed).

**LABOUR FORCE:** Persons, who were either ‘working’ (or employed) or ‘seeking or available for work’ (or unemployed) constituted the labour force. Persons, who were neither ‘working’ nor ‘seeking or available for work’ for various reasons during the reference period were considered as ‘out of labour force’. The persons under this latter category were students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young or too old persons, prostitutes, smugglers, etc. and casual labourers not working due to sickness.

**SELF-EMPLOYED:** Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (i.e. how, where and when to produce) and *economic independence* (i.e. market, scale of operation and money) for carrying out their operation. The fee or remuneration received by them comprised two parts – share of their labour and profit of the enterprise. In other words, their remuneration was determined wholly or mainly by sales or profits of the goods or services which were produced.

Categories of Self-employed persons: Self-employed persons were categorised as follows:

- i) **Own-account workers:** those self-employed persons who operated their enterprises on their own-account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour. They could, however, have had unpaid helpers to assist them in the activity of the enterprise.
- ii) **employers:** those self-employed persons who worked on their own-account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour, and
- iii) **helpers in household enterprise:** those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not received any regular salary or wages in return for the work performed. They did not run the household enterprise on their own but assisted the related persons living in the same household in running the household enterprise.

**REGULAR SALARIED/WAGE EMPLOYEE:** These were persons who works in other's farm or non-farm enterprises (both household and non-household) and , in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part time.

**CASUAL WAGE LABOUR:** A person who was casually engaged in other's farm or non-farm enterprises (both household and non-household) and in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labour.

**USUAL ACTIVITY STATUS:** The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively longer time (i.e. major time criterion) during the 365 days preceding the date of survey is considered as the principal usual activity status of the person. To decide the principal usual activity of a person, he/she was first categorised as belonging to the labour force or not during the reference period on the basis of major time criterion. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work'. For persons belonging to the labour force, the broad activity status of either 'working' or 'not working but seeking and/or available for work' was ascertain based on the same criterion viz. Relatively longer time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status of a person pursuing more than one such activity was determined once again on the basis of the relatively longer

time spent on such activities. In terms of activity codes, codes 11-51 were applicable for persons classified as workers, while code 81 was assigned to people either seeking or available for work(unemployed persons) and codes 91-97 for those who were out of labour force.

**SUBSIDIARY ECONOMIC ACTIVITY STATUS:** A person whose principal usual status was determined on the basis of the major time criterion could have pursued some economic activity for a relatively shorter time (minor) during the reference period of 365 days preceding the date of survey. The status in which such economic activity was pursued was the subsidiary economic activity status of that person. Thus, activity status codes 11-51 only were applicable for persons reporting some subsidiary economic activity. It may be noted that engagement in work in subsidiary capacity could arise out of the following two situations, viz.

- i) a person could be engaged for a relatively longer period during the last 365 days in one economic/non-economic activity and for a relatively shorter period in another economic activity, and
- ii) a person could be pursuing one economic activity/non-economic activity almost throughout the year in the principal usual activity status and simultaneously pursue another economic activity for a relatively shorter period in a subsidiary capacity.

**NUMBER OF SUBSIDIARY ECONOMIC ACTIVITIES PURSUED DURING LAST 365 DAYS:** For persons reporting some subsidiary activity, the number of subsidiary activities pursued by him/her during last 365 days was ascertained and recorded. However, details of a maximum of two such subsidiary economic activities were recorded. The activities having different work status was considered as different activities. Activities within the same work status but with different industry and/or occupation were considered as different activities. If a person was engaged in two or more subsidiary economic activities, details of subsidiary economic activity pursued for the maximum time period among all the subsidiary economics activities, or in other words, the major subsidiary economic activity was deemed as ‘subsidiary status number I’ and the next major one as ‘ subsidiary status number II’ were recorded.

## SECTION FOUR

### SUMMARY FINDINGS

This section is devoted to the analysis of results of household consumer expenditure survey held during 2000-2001. The main focus is on level and pattern of consumer expenditure of households in Delhi. Besides, certain selected demographic features, indicators of living of population and employment-unemployment situation were also discussed. The estimates are based on 72 rural and 2330 urban sample households.

#### 4.1 DEMOGRAPHIC FEATURES

The Survey estimated that there were about 31.12 lakh households with an average household size of 4.5 persons during the above said period. Out of the total households 2.21 lakh were in rural and 28.91 lakh in urban areas. Rural population

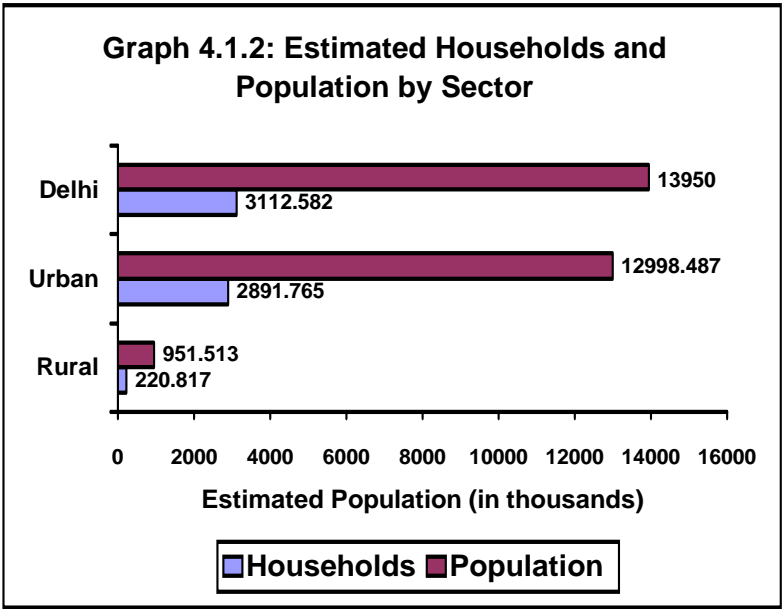

account for 6.82 % and that of urban constitute 93.18 % of the total population. Sex wise distribution of population revealed that 76.62 lakhs were male and 62.88 lakhs were females and the sex ratio comes to 821

females for thousand males.

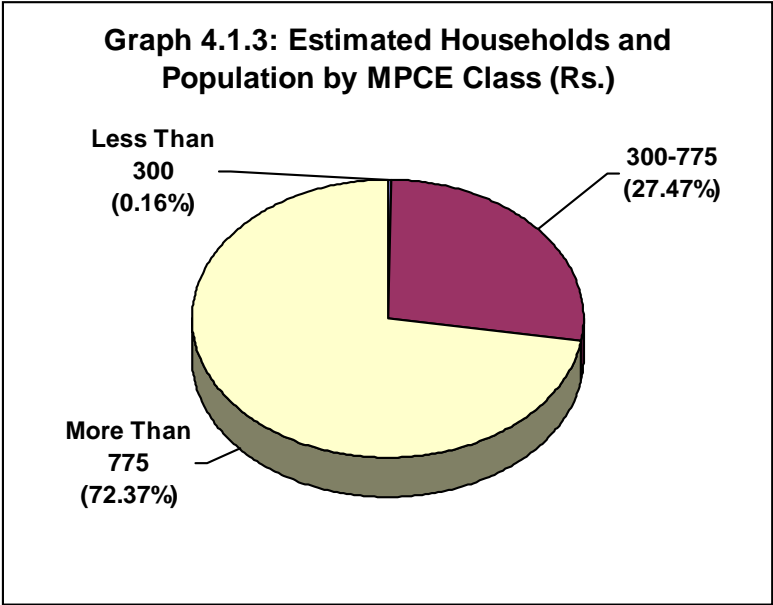

**Statement 4.1.1: Distribution of households/Population**

Sector	Estimated Households	Estimated Population			Household Size
		Male	Female	Total	
Rural	220817	525837	425676	951513	4.31
Urban	2891765	7136042	5862445	12998487	4.50
Delhi	3112582	7661879	6288121	13950000	4.48

Statement 4.1.2 gives the distribution of population Monthly Per Capita Expenditure (MPCE) class-wise. In rural areas 43.13 % of population were in the highest MPCE class

namely Rs.950 and above; 17.42 % were in Rs.775-950 class and 32.43 % in Rs.615-775 MPCE class. On the other hand in the urban areas 17.92 % of population were in the MPCE class of Rs. 1925 and above, 9.44 % in the

Rs.1500-1925 class and 13.03 % in Rs. 1120-1500 MPCE class. At the state/UT level it was observed that more than 72 % of the population was in the MPCE class of Rs.775 and above.

## **SOCIAL GROUP WISE DISTRIBUTION:**

Social group-wise break-up of households is presented MPCE class wise in statement 4.3. It revealed that 15.88% of the total households belonged to ‘Scheduled caste’ category, 8.87% to ‘Other Backward Classes’ and 75.25% belonged to other social groups.

**Statement 4.1.3: Social Group-wise Distribution of Estimated Households**

## **FEMALE-HEADED HOUSEHOLDS:**

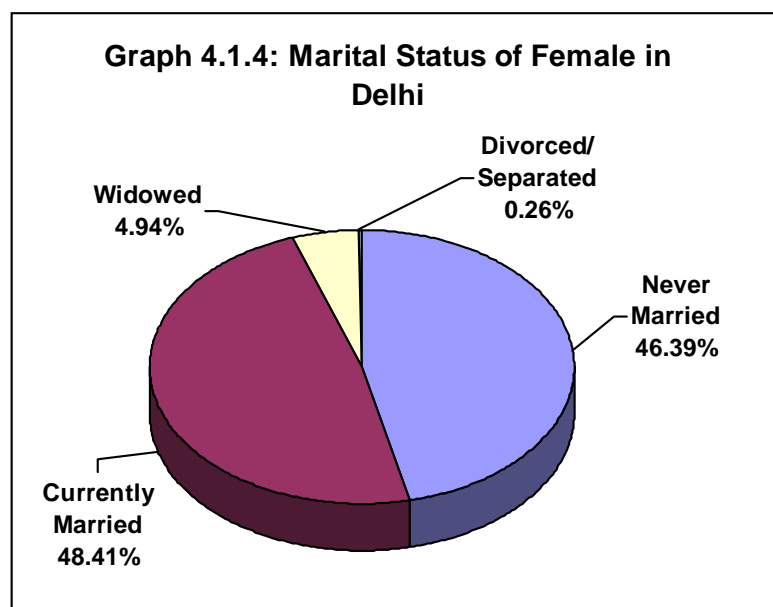

There has been a demand for bringing out data on women related parameters both at national and state level. Accordingly data was generated on female-headed households in Delhi. The survey indicated that only 5.62% of the total families in Delhi are having female as head of the household thereby showing an increase by more than 1 % points over the previous round.

**Statement 4.1.4: Distribution of Households by Gender of Head of the Family**

Sector	Number of Households			
	Male as Head	Female as Head	Percentage of Female Headed Households to Total	Total

<b>DELHI</b>	<b>2300283</b>	<b>136905</b>	<b>5.62</b>	<b>2437188</b>

## MARITAL STATUS:

Information on marital status was obtained through female approach during the survey. The outcome of the survey is that out of the total female population 48.41% were

currently married, 4.94% widowed and only 0.26% were divorced/separated. The proportion of female population in the category of never married was 46.39%. Statement 4.1.5 provides age group-wise position of marital status in Delhi. In the age group 15 to 19 years, 96.16 percent of the females were in the

category 'never married' while the remaining 3.82% were 'currently married'. It has been observed that, as the age-group is progressing the proportion of female with status 'never married' is decreasing while that of 'currently married' is increasing. While in the age group 60 and above, about 43% females were currently married and the remaining 57% were widowed.

### Statement 4.1.5: Distribution of Female Population by Marital Status in Delhi

Age-Group	Marital Status (Female)				
	Never Married	Currently Married	Widowed	Divorced/ Separated	Total
0-14	1976350 (99.95)	645 (0.03)	442 (0.02)	0 (0.00)	1977437 (100.00)

Note: Figures in ( ) indicates % to Total

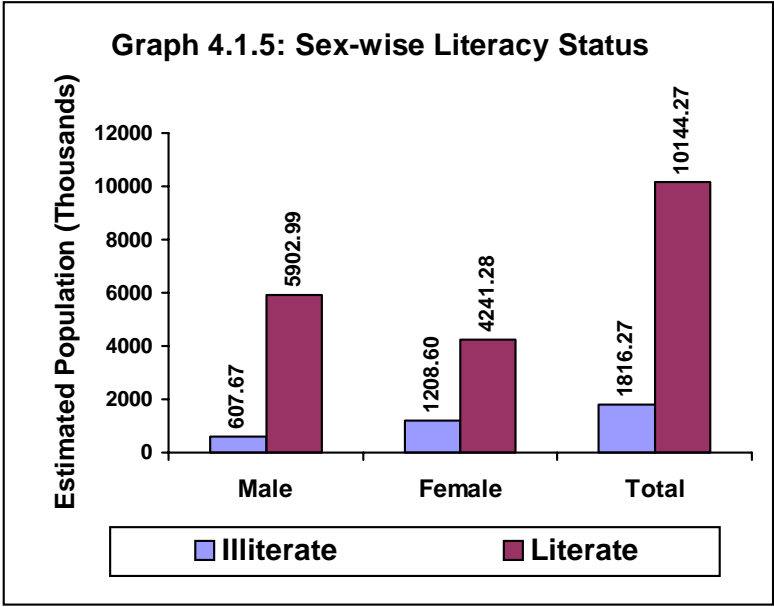

**LITERACY LEVEL AND RATE:**

Out of the total estimated population (Excluding 0-6 years Age-Group) in Delhi 15.19% were found to be illiterate and 84.81% were literate with different levels of educational attainment. Sex-wise literacy rate revealed that 90.67% of males and 77.82% of females in Delhi were literate.

**Statement 4.1.6: Number of Literate among +6 year population In Delhi**

S.No.	Educational Level	Male	Female	Total
A	Illiterate	607667	1208600	1816267
B	Literate	5902990	4241282	10144272

C	TOTAL (A +B)	6510657	5449882	11960539
D	Literacy Rate	90.67	77.82	84.81

Out of the total 101.44 lakh literates, 18.53% attained education upto primary, 15.9% upto secondary level and 21.98% completed graduation & above. Of late adult literacy (15 years and above) is being accepted as a satisfactory parameter at international level to judge the quality

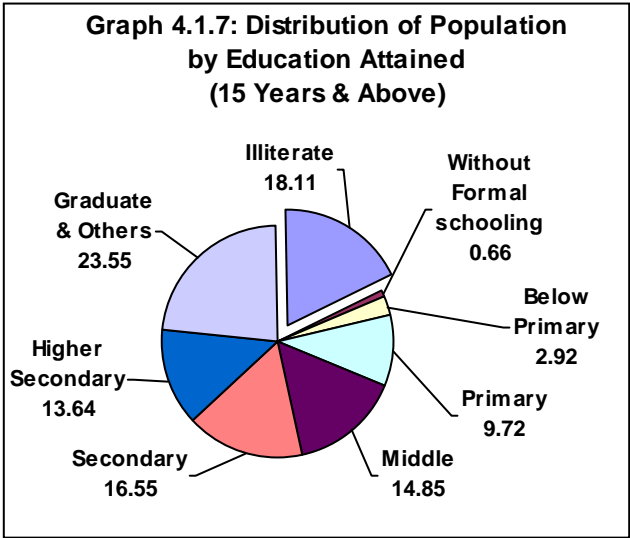

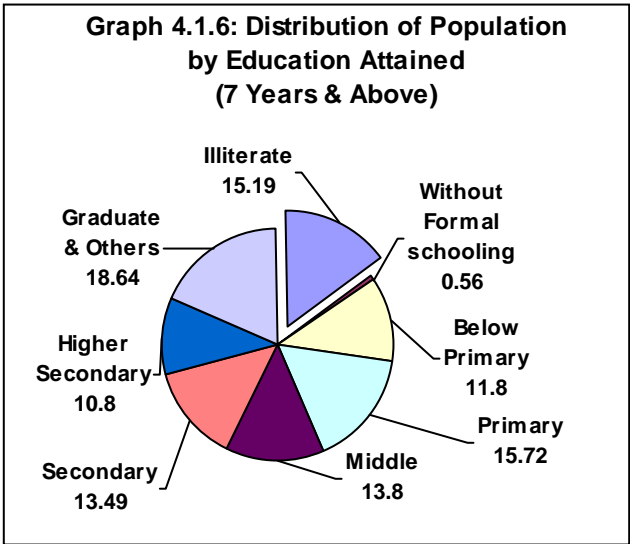

of literacy of population. Literacy rate of Delhi for 15 year and above age group was estimated at 81.89%.

In case of Males this was 89.23% and that of female it was 73.12%. Sector-wise break-up revealed that 73.45% of the rural and 82.50% of the urban population in the 15 years and above age group were literate.

**Statement 4.1.7: Number of Literate Among +15 Years Population**

S.No.	Item	Rural	Urban	Delhi
<b>A</b>	<b>Male</b>			
1	Population	345663	4813707	5159370

2	Number of Literate	466639	7288860	7755499
3	Percentage to Total	73.45	82.50	81.89

The comparative position between Universal and Adult Literacy rates is given in the statement 4.1.8 below. On the whole about 3% difference was noticed between the two sets of data. Among the literate in age group 15 years and above, 23.55% were Graduates and others, 16.55% completed Secondary education and 9.72% Primary Level of education. The percentage of people who were literate but not completed primary level education was worked out to be 2.92%.

**Statement 4.1.8: Percentage distribution of population in Delhi by their Age group and Education attainment.**

## 4.2 FEATURES ON LIVING CONDITIONS

### COVERED AREA OF DWELLING UNITS:

Data was collected on the covered area (Sq. Meter) of the dwellings occupied by households, as it constitutes one of the important components of household characteristics. The survey revealed that 30.47% of the total families live in dwellings with an average covered area ranging from 30-60 square meters per family. 25.82% were residing in accommodation with a covered area above 60 square meters and nearly 3% of the households are in possession of living premises with covered area below 8 square meters.

#### Statement 4.2.1: Distribution of Households by Covered area of Dwelling Unit

Covered Area of Dwelling Unit ( in Sq. Metre)	No. of Households			
	Rural	Urban	Delhi	Percentage to Total
Less than 4	0	0	0	0
4 - 6	9235	26316	35551	1.14

# SOURCE OF ENERGY FOR COOKING

It is our experience that multiple types of energy are used by households in their day to day life, however survey focused on main source only. Statement 4.2.6 gives the distribution of households by source of energy for cooking.

The survey revealed that, 74.78% households used LPG, 19.56% Kerosene, 2.75% Dung cake, firewood, Coal, Coke etc. and rest 1.61% were using other type of energy as the primary

source of cooking in Delhi. About 1.30% were not using any source for cooking purpose.

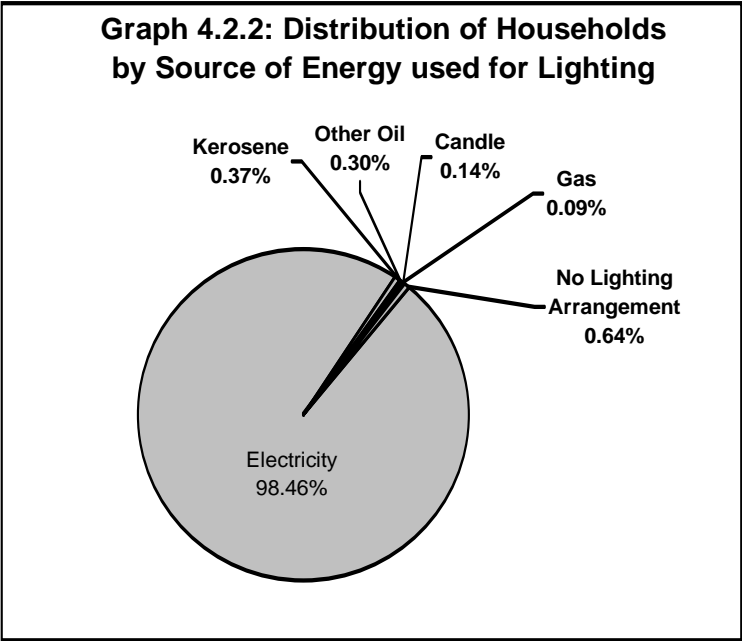

**Statement 4.2.6: Distribution of Households by Primary Source of Cooking**

S.No.	Source Of Energy	Rural	Urban	Combined

## 4.3 EMPLOYMENT - UNEMPLOYMENT

### LABOUR FORCE

The term labour force may be taken to mean, those persons who are economically active in the economy. Labour force includes persons employed as well as those seeking and available for work. In nutshell it is composed of employed and unemployed persons. The results are based on the data collected on principal usual activity status and subsidiary activity status taken together during the reference period.

The survey revealed that out of the total estimated population (all age groups) of 139.50 lakh in Delhi, 44.70 lakh(32.05%) of them were estimated to be in the labour force during 2001-2002.

Sector wise break-up indicated that 34.93% of the rural and 31.83% of the urban population figured in the Labour force of Delhi. Further analysis of population revealed that out of the total male population 52.72% were in labour force whereas only 6.85% of the total female were in economically active category.

Coming to Work Force which constitutes the persons actually employed, , 91.24% and 8.76% were male and female respectively. Rural areas of Delhi account for 6.80% of labour force whereas 93.20% were in urban Delhi

### LABOUR FORCE PARTICIPATION RATES

Labour force participation rate may be taken to mean as the number of persons in the labour force per 1000 persons in the population. Statement 4.3.2 gives LFPRs sex-wise and sector-wise.

It is evident from the statement 4.3.2 that out of every 1000 persons in Delhi only 320 persons were found to be economically active persons. LFPR in respect of male was 527 persons per 1000 males in the total population and in case of females this rate was only 69 persons per 1000 females. Similarly, Work force participation rate worked out to 299 and that of un-employment stood at 66 persons per 1000 persons in the labour force.

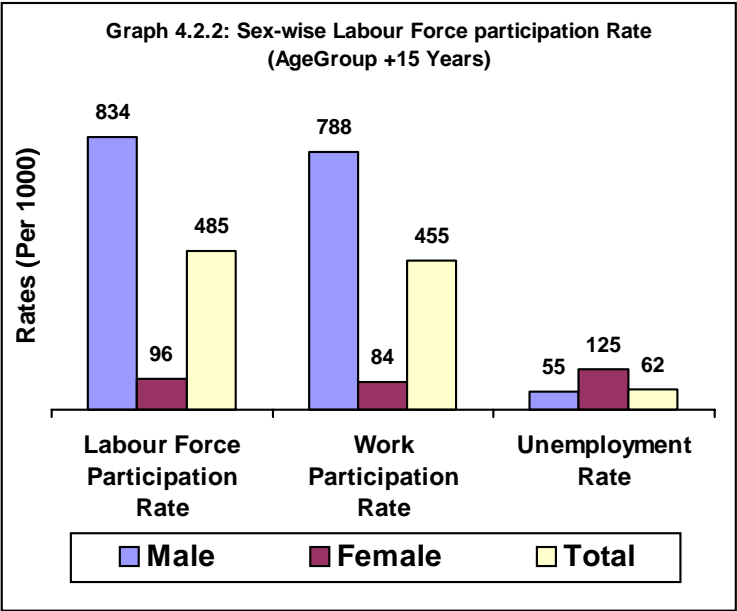

**LFPR OF POPULATION OF 15YEARS AND ABOVE**

LFPR in respect of population of 15 years and above is perhaps the appropriate and meaningful indicator. Statement 4.3.2 provides these details sector and gender-wise. Accordingly, Labour force participation rate was estimated to be 485 In respect of males it was 834 and that of females were 96. Sector-wise position stood at 523 for rural and 464 for urban. This rate for males was 900 and 769 for rural and urban area respectively.

On the other hand Work Participation Rate in the Age Group 15 years and above were 788 and 84 among Males and Females respectively while this rate was 455 for Delhi. Unemployment rate

worked out in the Age Group 15 Years and above revealed that 55 males per 1000 males in the labour force and 125 females per 1000 females in the labour force were unemployed in Delhi. This rate for Delhi

as a whole was 62 persons per 1000 persons in labour force.

**Statement 4.3.2: Labour Force participation Rate**

S.NO.	ITEM	PER 1000 PERSONS		
		MALE	FEMALE	COMBINED
<b>1</b>	<b>POPULATION 15+ YEARS</b>			
<b>A</b>	<b>RURAL</b>			
	Labour Force Participation Rate	900	72	523
	Work Force Participation Rate	763	69	446
	Un-employment Rate	153	44	146
<b>B</b>	<b>URBAN</b>			
	Labour Force Participation Rate	769	98	464
	Work Force Participation Rate	733	85	438
	Un-employment Rate	47	129	55
<b>C</b>	<b>TOTAL</b>			
	<b>Labour Force Participation Rate</b>	<b>834</b>	<b>96</b>	<b>485</b>
	<b>Work Force Participation Rate</b>	<b>788</b>	<b>84</b>	<b>455</b>
	<b>Un-employment Rate</b>	<b>55</b>	<b>125</b>	<b>62</b>
<b>2</b>	<b>POPULATION - ALL AGE GROUPS</b>			
	<b>Labour Force Participation Rate</b>	<b>527</b>	<b>69</b>	<b>320</b>
	<b>Work Force Participation Rate</b>	<b>497</b>	<b>58</b>	<b>299</b>
	<b>Un-employment Rate</b>	<b>57</b>	<b>151</b>	<b>66</b>

Analysis of statement 4.3.3 reveals that LFPRs in terms of percentage for Delhi as a whole was more than 50% in case of age-groups 25-59.

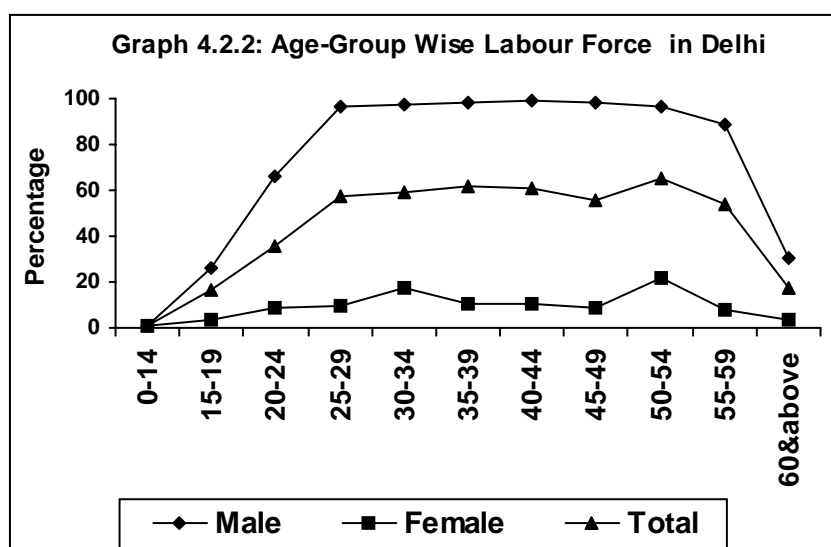

It can be observed from the statement that the percentage of people in the labour force in the age-group 0-14 years was less than 1% and it was around 17% in respect of age group 60 years & above.

Statement 4.3.4 contains age-group and sex-wise labour force details. Among males labour force participation rates(%) for the age-groups 25-29years to 50-54 years was more than 95%. In case of 40-44years age group among males LFPR was near to 100%.

**Statement 4.3.3: Distribution of Labour Force by Age Group and Sector.**

## 4.4 CONSUMER EXPENDITURE

### HOUSEHOLD CONSUMER EXPENDITURE

The main results of consumer expenditure survey are presented with reference to per capita/household consumer expenditure both in rural and urban areas, distribution of expenditure under main heads namely food and non-food items, and further details each sub-group wise. This analysis will help to ascertain the pattern of consumer expenditure in the state of Delhi.

#### Statement 4.4.1: Per capita/Household Monthly Consumer Expenditure by Sector

SECTOR	FOOD	NON-FOOD	TOTAL
<b>MONTHLY PER CAPITA EXPENDITURE (Rs)</b>			
RURAL	495.74	515.11	1010.85
URBAN	535.67	917.16	1452.83
DELHI	531.64	876.68	1408.32
<b>AVERAGE MONTHLY HOUSEHOLD CONSUMER EXPENDITURE (Rs)</b>			
RURAL	2135.97	2219.46	4355.43
URBAN	2407.83	4122.65	6530.48
DELHI	2379.40	3923.58	6302.98

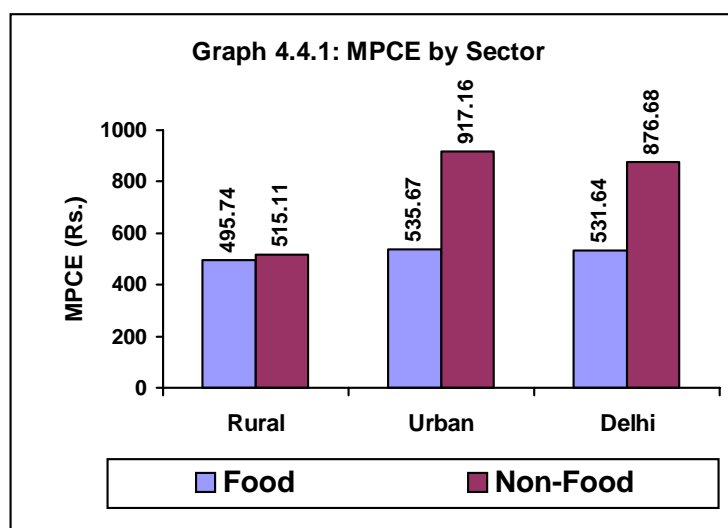

Statement 4.4.1 gives the Household consumer expenditure on food and nonfood

groups sector-wise. The

average monthly per capita expenditure (MPCE) worked out to Rs.1408.32. Out of this Rs. 531.64(37.75%) was spent on food items and Rs.876.68 (62.25%) on non-food items.

Average monthly consumer

expenditure per family in Delhi was estimated at Rs.6302.98. The expenditure pattern in rural, urban and Delhi as a whole is presented in graph 4.4.1.

## OFFTAKE FROM PDS & OTHER SOURCES

The popularity of PDS can be measured in terms of the proportion of purchases made from PDS vis-à-vis open market. During the survey, data on off take from PDS and other sources was collected in respect of certain selected items of daily use. Statement reveals that out of the total quantity of sugar purchased nearly 40% is from PDS and 60% from open market. In case of Rice and Wheat, the percentage of purchase made from PDS is very insignificant. Nearly one-third of the Kerosene needs alone was purchased from PDS outlets.

**Statement 4.4. : Off-take from Public Distribution System and Other Sources in Delhi (Quantity Percentage)**

Item	Percentage (Quantity)					
	RURAL		URBAN		DELHI	
	From PDS	From Other Sources	From PDS	From Other Sources	From PDS	From Other Sources
Rice	0.00	100.00	4.34	95.66	4.03	95.97
Wheat/Atta	0.00	100.00	1.97	98.03	1.75	98.25
Sugar	1.57	98.43	9.71	90.29	8.90	91.10
Kerosene	5.82	94.18	41.16	58.84	38.12	61.88

## 4.5 COMPARISON OF KEY FINDINGS

Selected findings of Central and State Samples are presented along with sample households covered in statement 4.5.1 Rural sample results in central sample have not been published separately hence the comparison is not feasible. The important indicators of the survey, namely estimated population, households, household size, household consumer expenditure and per capita monthly consumption of cereals were by and large found to be comparable in both sets of data.

## SECTION FIVE

### NOTE ON STATISTICAL TABLES

#### ESTIMATED POPULATION:

The estimated population of Delhi as per survey was 10907698 persons during as against population projections available from Registrar General of India as on 1 July 2001 was 13950000.

#### Statement 5.1: Estimated Survey Population

ITEM	RURAL		URBAN	
	MALE	FEMALE	MALE	FEMALE
Survey Population	632742	465603	5375056	4434297
RGI Population Projections (As On 1st July 2001)	525837	425676	7136042	5862445
Adjustment Factor	<b>0.83104</b>	<b>0.91425</b>	<b>1.32762</b>	<b>1.32207</b>

Comparison of survey population with projected RGI population was made (as on 01.7.2001) to ascertain the discrepancies, if any, between the two sets of data. Sample survey estimates were found to be on the lower side in urban and on higher side in rural for obvious reasons. For the benefit of data users adjustment factor was worked out and presented in the statement 5.1. This is to be applied in respect of rural (deflated) and urban (inflated) aggregates to get the data comparable with RGI's population projections. However these adjustment factors have already been applied while presenting the data in all the statements under section 4 of this report.

Table 1.0: Age-Group wise Distribution of Sample Population

Age Group	Rural			Urban			Delhi		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
0-4	26	14	40	495	397	892	521	411	932
