PREFACE

The Annual Report on Registration of Births and Deaths in N.C.T. of Delhi has been brought out for the year 2019 by the Directorate of Economics and Statistics & Office of Chief Registrar (Births & Deaths) under Sections 4(4) and 19(2) Registration of Births & Deaths Act, 1969, which makes it mandatory to bring out the Annual Report on Registration of Births and Deaths.

This report presents an overview of the working of the Civil Registration System (CRS) in the NCT of Delhi and provides good source of information on the vital rates at all levels. The Report elicits very useful statistical information on registered births, deaths, infant deaths and still births and sex ratio at birth based on Civil Registration Records. Many valuable indicators are presented in the Report like birth rate, death rate, trends in birth order and its relation with level of literacy of parents, type of medical attention at the time of birth, deaths by age group, leading medically certified causes of deaths and a host of many other features in an exhaustive manner. The information would be very useful for evolving policies for improved health management in the state.

The report is presented in five sections. The first section gives details of the administrative set-up of the Civil Registration System, registration initiatives taken for effective implementation of the provisions of the Registration of Births & Deaths Act, 1969 and other related aspects, whereas, sections three and four covers birth profile and death profile respectively. Detailed statistical tables are given in section five. Maximum number of tables as prescribed by the Office of RGI, have been presented in the Report.

The Report has been prepared by the Vital Statistics Unit of the Directorate of Economics & Statistics, Delhi with IT support from the EDP Section. I sincerely acknowledge the sincere efforts of all the officers and officials associated in this exercise. My special thanks are to the functionaries of the local bodies (East DMC, North DMC, South DMC, NDMC & DCB) engaged in the Civil Registration work for providing the basic data on registration of births & deaths in Delhi.

I hope, this report will be of immense help to the Policy makers, Planners and Research Scholars interested in the study of Vital Statistics in N.C.T. of Delhi. It will be our constant endeavor to improve the quality of the publication, for which, we invite the valuable comments and suggestions from the readers of this Report.

ANNUAL REPORT ON REGISTRATION OF BIRTHS & DEATHS IN DELHI – 2019

EXECUTIVE SUMMARY

The following are the main highlights of the “Annual Report on Registration of Births & Deaths in Delhi - 2019.

A. PRIME VITAL INDICATORS:

- i) **Birth Rate:** The birth rate worked out to 18.35 per thousand of population during 2019 as against 18.55 for the year 2018.
- ii) **Death Rate:** The Death Rate per thousand of population worked out to 7.29 during 2019 as against 7.44 in 2018.
- iii) **Infant Mortality Rate:** The infant mortality rate per thousand live births was 24.12 during 2019 as against 23.81 during 2018.
- iv) **Maternal Mortality Rate:** Maternal mortality rate per thousand live births was 0.55 in 2019 as against 0.40 in 2018.
- v) **Sex Ratio at Birth:** The Sex Ratio has slightly declined to 920 females per thousand males during 2019 while it was 924 during 2018.

B. BIRTH REGISTRATION: The brief profile of birth registration is as under:

- i) The total number of births registered during 2019 was 365868 as against 362803 during 2018.
- ii) Average number of births per day in Delhi worked out to 1002 in 2019 as against 994 in 2018.
- iii) Out of the total births registered, 190527 (52.08%) were male, 175267 (47.90%) female and 74 (0.02%) others (“others” includes transgender/ ambiguous/ not stated).
- iv) Out of the total births, 333492 (91.15%) were institutional and 32376 (8.85%) domiciliary in nature.

- v) Out of 333492 institutional births, 225738 (67.69%) births occurred in govt. hospitals. Out of the total institutional births, 158999 (47.68%) were females.
Out of 32376 non institutional births, 16268 (50.25%) were females.
- vi) MCD accounted for 315457 (86.22%) of total births whereas 46851 (12.81%) occurred in NDMC areas and 3560 (0.97%) in DCB. Further, the analysis as per five local bodies (i.e. considering the trifurcation of MCD) shows that maximum (34.04%) births were in North Delhi Municipal Corporation.
- vii) Out of total births, 7.93% births were rural and 92.07% were urban according to place of residence of mother.
- viii) Out of the total births, 55.90% were of first order, 33.0% of second order, 9.22% of third order and 1.88% were of fourth or higher order.
- ix) Analysis of domiciliary birth events with respect to the type of medical assistance available at the time of delivery revealed that in 0.52% of cases, the doctor/ nurse/ trained mid-wife was present and in 39.77% of cases, attendance of un-trained mid-wife/traditional birth attendant was available. In 59.71% cases, the delivery occurred with the help of relatives/others/not stated.
- x) Age-group of the mother at the time of delivery was analyzed and it was revealed that in maximum (39.68%) cases, it was 25-29 years followed by 37.55% cases in 20-24 years group and in 20.41% cases, the age of mother was more than 29 years. Further, it is observed that in 2.36% cases, the age of mother was even 19 years or less.
- xi) There is a close relationship between the level of educational attainment of the mother and order of births. It is observed that out of total births of fourth and higher birth order, in 28.07% cases, the level of education of mother was 'primary but below matric' and in 17.44% cases, the mothers were illiterate. Obviously, in case of fourth and higher order of birth minimum proportion of births (4.54%) were in the category of mother having 'graduation or above qualification'.

C. DEATH REGISTRATION:- A brief profile of death registration is as under:

- i) In Delhi, 145284 deaths were registered during 2019 as compared to 145533 deaths registered during 2018.
- ii) Out of the total deaths registered, 89723 (61.76%) were male and 55527 (38.22%) female while 34 (0.02%) cases of deaths were having sex “others” (includes transgender/ ambiguous/ not stated).
- iii) MCD accounted for 75.53% of total registered deaths while the share of NDMC was 23.17% and DCB registered only 1.30% of the total deaths. Further, the analysis as per five local bodies (i.e. considering the trifurcation of MCD) shows that maximum (33.10%) deaths were in North Delhi Municipal Corporation.
- iv) The average number of deaths per day in Delhi worked out to 398 in the year 2019 as against 399 during 2018.
- v) 65.98% of the total deaths were reported by the medical institutions and the remaining 34.02% were domiciliary deaths during 2019.
- vi) Out of total 145284 deaths registered during the year 2019, the infant deaths were 8823.
- vii) Deaths by age group revealed that maximum (37.08%) deaths occurred in 65 years & above age group followed by 17.70% in 55-64 years age group, 13.67% in 45-54 age group and other 30.93% deaths were in the age of below 45 years. However, 0.63% deaths occurred in age group “Not Stated”.
- viii) The analysis of major causes of institutional deaths during 2019 as per ICD 10 (i.e. International Classification of Diseases-10th Revision) reflect that 10.18% deaths were due to septicemia, 7.24% due to hypertensive diseases, 6.95% due to shock (n.e.c.), 4.45% due to disease of pulmonary circulation and other forms of heart diseases, and 4.10% due to tuberculosis. The remaining MCCD deaths were due to other causes.

INTRODUCTION

(Review of the Working of Act)

SECTION ONE

INTRODUCTION

The Civil Registration System (CRS) aimed at proper accounting of vital events for the issuance of certificates as well as generation of valuable data for plan & policy formulation on health sector, received a big boost with the promulgation of The Registration of Births and Deaths Act, 1969 (RBD Act, 1969) in all States/ UTs in the country. This Act came into force in Delhi w.e.f. 1st July, 1970 and accordingly The Delhi Registration of Births and Deaths Rules, 1970 have also been notified w.e.f. 1st January, 1971. These rules were modified and made more people friendly in December 1999 and came into force w.e.f. 1st January, 2000. Prior to the implementation of the Registration of Births and Deaths Act, 1969 (Act No. 18 of 1969), Registration of Births and Deaths in Delhi was governed by multiple Acts/Rules. The urban area of Municipal Corporation of Delhi (MCD) was covered under the provisions of the Delhi Municipal Corporation Act, 1957 (Section 394-96) and by laws made there under, whereas this function in the rural area of MCD was carried out under the Panchayat Raj Act, 1959. Further, the MCD has been trifurcated w.e.f. May, 2012 into three corporations namely East Delhi Municipal Corporation (East DMC), North Delhi Municipal Corporation (North DMC) and South Delhi Municipal Corporation (South DMC). On the other hand, the registration within the limits of New Delhi Municipal Council (NDMC) was governed by section 188 (c) and subsection (1) of section 199 of the Punjab Municipal Act, 1911. In the area under Delhi Cantonment this function was performed under clause (1) of section 281 of Cantonment Act, 1924.

MEANING & SCOPE OF CRS

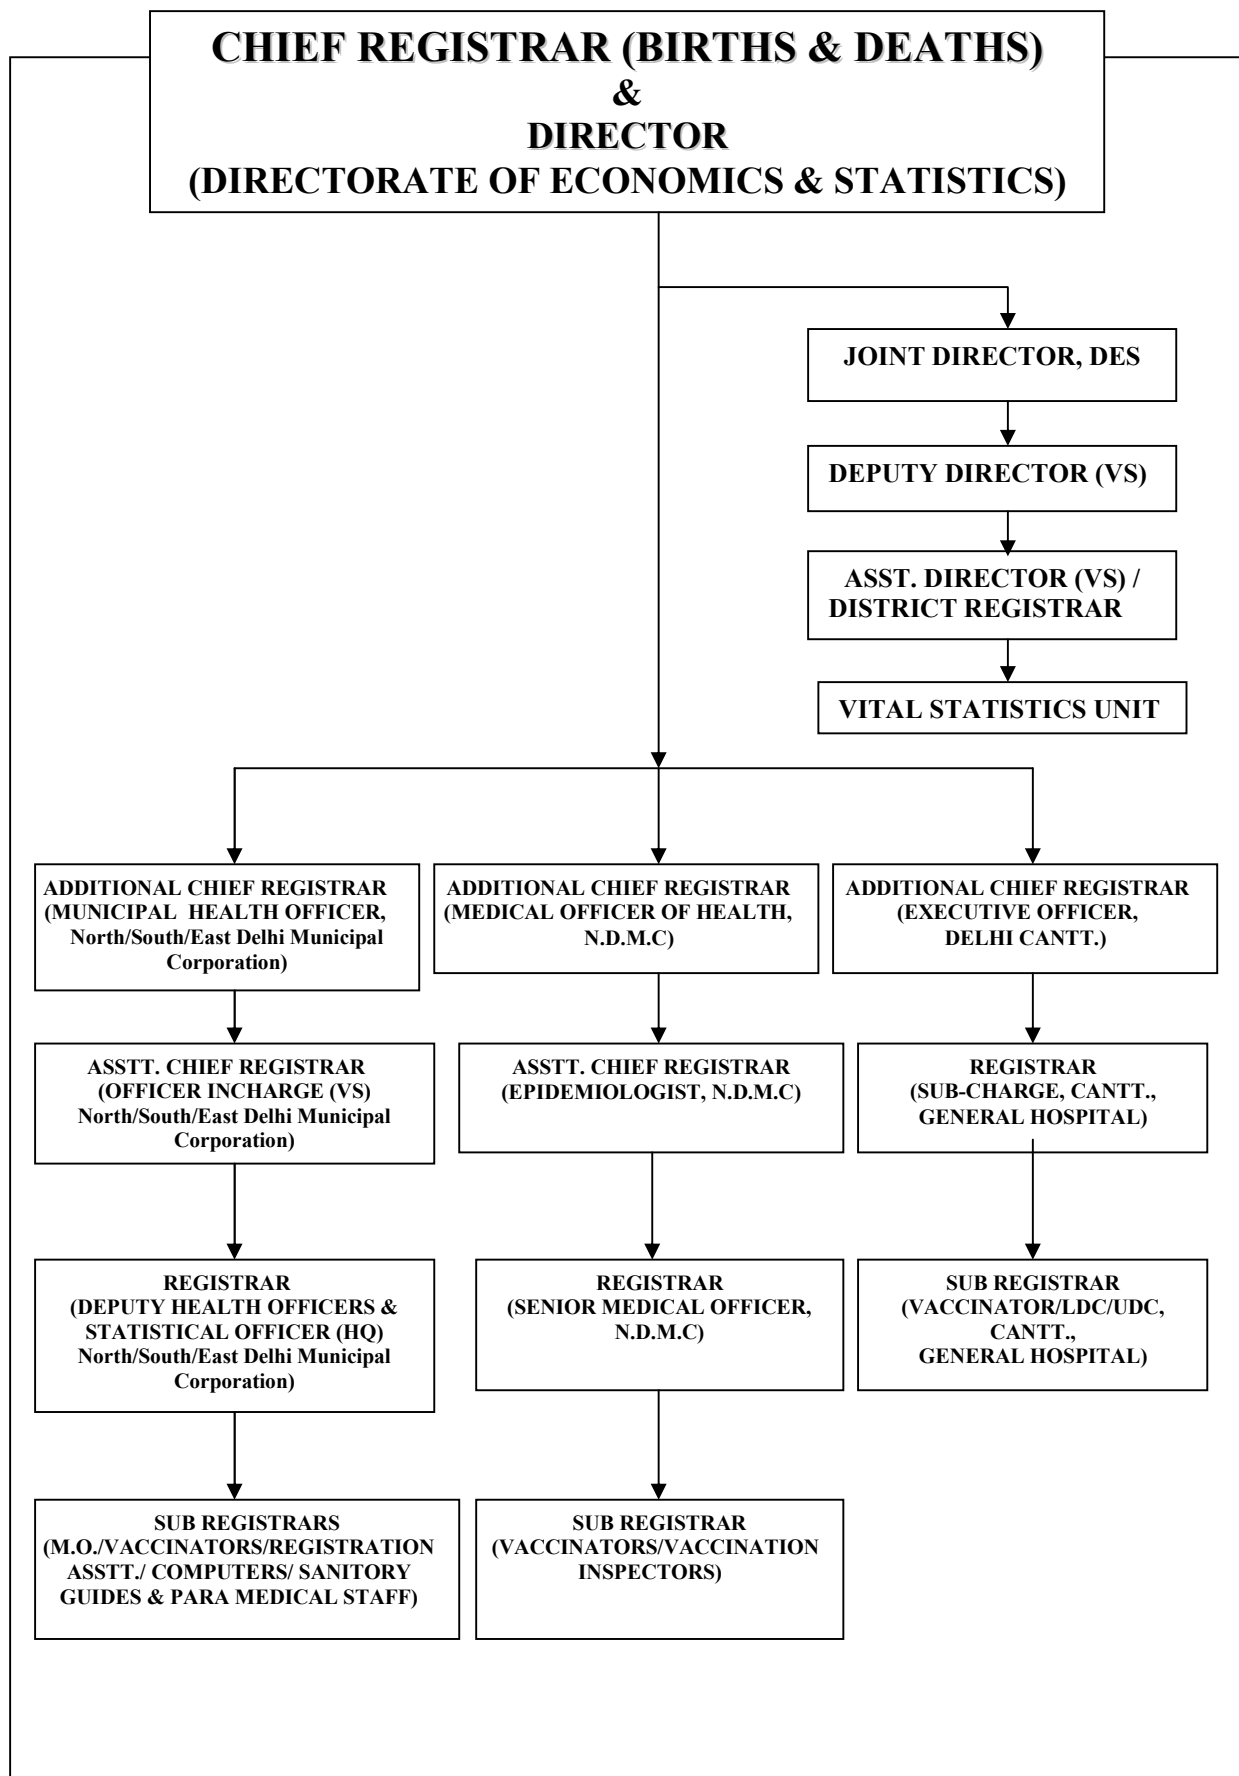

Civil Registration System may be defined as the legal recording of the occurrence of vital events (births and deaths) through a network of government offices and designated officials, together with certain identifying or descriptive characteristics of the events on a continuous, permanent and compulsory basis. Civil Registration System also serves as the tool for measuring the changes in the population. In other words, population census held once in a period of 10 years gives stock of population at a point of time whereas, vital statistics presents the flow of population.

ADMINISTRATIVE SET UP

Director, Directorate of Economics and Statistics, Govt. of NCT of Delhi also functions as the **Chief Registrar (Births & Deaths)** for the NCT of Delhi. The Chief Registrar is responsible for the proper implementation of the RBD Act, 1969 and the rules made there under and keeps a close liaison with the Registrar General of India, Ministry of Home Affairs, which is the nodal agency for such matters at the national level. The Chief Registrar is assisted by a secretariat in the form of vital statistics unit of the Directorate. The actual registration of births and deaths in Delhi was done by three local bodies viz MCD, NDMC and Delhi Cantonment Board through a network of centers spread all over Delhi and with effect from May 2012 five local bodies are doing the civil registration work due to trifurcation of MCD into North/South/East Delhi Municipal Corporations. Each local body has a notified Additional Chief Registrar to coordinate the functions in the designated geographical area. The administrative set up of the civil registration system in Delhi may be seen from the organization chart.

REGISTRATION PROCEDURE

Registration of births, still births and deaths is compulsory under the Registration of Births & Deaths Act, 1969 and rules framed there under. According to the Act, it is the duty of the head of the household and if he is not present in the house the nearest relative of the head present in the house and in the absence of any such person, the oldest adult person present in the house to report the occurrence of any live birth or still birth or death. For births and deaths in hospitals/ health centers/ maternity homes/ nursing homes, other similar institutions or in jail or in dharamshala or in hostels etc., it is the responsibility of the In-charge of the institution to report birth, still birth and death to the Registrar (B&D) in their respective area within the prescribed time limit. Further, Registrar (Births & Deaths) can act suo motto and direct concerned to report the event under section 21 of the RBD Act 1969, if he/ she comes to know that a vital event has occurred in the area under jurisdiction.

As per Delhi Registration of Births & Deaths Rules, 1999, all births, still births and deaths within 21 days of the occurrence are to be reported to the Registrar/ Sub-Registrar of the concerned local area. The information is to be given in live birth report (Form-1), still-birth report (Form-3) and death report (Form-2). To get the birth registration of adopted child in the name of adoptive parents, the provision of Form 1-A has been made. Further, as per direction of ORGI, the UID number has been incorporated in the Forms. As soon as registration of birth or death is completed, a certificate in form No. 5 or 6 respectively containing essential particulars of the event is given free of cost to the applicant under Section 12 of the R.B.D. Act 1969. Additional copies of the birth/ death certificates may be obtained by the applicant by paying the prescribed fee under section 17 of the RBD Act.

In case, where the birth of any child had been registered without a name, the parents or guardian of such a child may approach the Registrar (B&D) for addition of the name of the child in the birth certificate free of cost within 12 months from the date of registration of the birth of a child. After one year but within a period of 15 years for the births occurred on before or after 01.01.2000, the name of child in birth record can be entered on the payment of the prescribed late fee.

DELAYED REGISTRATION

Any vital event not reported to the appropriate authority within a period of 21 days from date of occurrence constitutes delay. The following procedure is to be followed in such situations:

- (a) Any birth or death of which information is given to the Registrar after the expiry of the specified period of **21 days** but within thirty days of its occurrence shall be registered on payment of a late fee of Rs. 2/-.
- (b) Any birth or death of which information is given to Registrar after **30 days**, but within one year of its occurrence shall be registered only with the written permission of the concerned Registrar on payment of late fee of Rs. 5/-.
- (c) Any birth or death which has not been registered **within one year** of its occurrence, shall be registered only on an order of Area Sub- Divisional Magistrate and payment of late fee of Rs. 10/-.

MEDICAL CERTIFICATION OF CAUSE OF DEATH

Medical Certification of Cause of Death (MCCD) provides reliable data on cause of mortality. This data serves as a valuable tool for public health planners, administrators, medical professionals and research workers to study cause of death in the population. Keeping in view the importance of this information, the provision has been made u/s 10(2)

and 10(3) of the Registration of Births & Deaths Act, 1969 for cause of death certification by the medical practitioner of the hospital last attended by the deceased and report it on Form No. 4 (in case of institutional death) and on Form No. 4A (for domiciliary death) for further submission of it along with death reporting form (Form No. 2) to the Registrar's office at the time of registration of death.

In Delhi, the reporting of Medical Certification of Cause of Death has been made compulsory since the year 2003 in respect of institutional deaths. The domiciliary deaths have not been brought under the ambit of MCCD due to various practical problems such as lack of awareness among the citizens, economic conditions and also due to non-availability of adequate health infrastructure.

DEATH REGISTRATION AT CREMATION GROUND

The facility of on the spot registration and issuance of Death Certificates has been provided by North Delhi Municipal Corporation in respect of domiciliary deaths occurred in Delhi and body cremated at Nigam Bodh Ghat Cremation Ground.

LEVEL OF COMPUTERIZATION & FLOW OF DATA

All local bodies have computerized the births & deaths registration system and all major hospitals are reporting the events online to the concerned Registrar (B&D). In North/South/East Delhi Municipal Corporations, more than 950 hospitals/ nursing homes report the vital events through online institutional registration (OLIR) system thereby avoiding manual handling for feeding the data/ information and consequently less chances of delays, omissions etc. for reporting the events. In NDMC & DCB, almost all hospitals are reporting the vital events online. Soft copy of the CRS data is supplied along with MCCD to Chief Registrar's Office by the local bodies for preparation of Annual Report.

As we are aware that the office of RGI has taken the initiative for adopting a uniform software throughout the country which will certainly improve the CRS because the complexities of handling the data/ information can be culled out, as output of different softwares will be nullified by using a uniform software.

FUNDS UTILISED FOR CIVIL REGISTRATION SYSTEM

During the year 2019-20, a total amount of Rs. 12,07,303/- was spent from State budget on printing of birth and death reporting forms in Delhi and imparting training programme on Medical Certification of Cause of Deaths. The item wise expenditure is as under:

Statement 1.1: Expenditure incurred on CRS in Delhi

| Sl. No. | Items | Expenditure incurred from | | | |
|---------|-----------------------------|---------------------------|------------------|------------------------|----------|
| | | State Budget (Rs) | | Central Assistance(Rs) | |
| | | 2018-19 | 2019-20 | 2018-19 | 2019-20 |
| 1 | Printing of reporting forms | 11,79,062 | 11,47,921 | - | - |
| 2 | Training programmes (MCCD) | - | 59,382 | - | - |
| | Total | 11,79,062 | 12,07,303 | - | - |

LEVEL OF REGISTRATION

The CRS in quantitative terms can be gauged primarily from the level of registration achieved consistently in a given region/ state. The level of registration may be taken as the ratio of actual number of births/ deaths registered as per CRS to the estimated births/ deaths under SRS in a calendar year.

Statement 1.2: Level of Registration in Delhi

Obviously, Delhi is among the few States/ UTs which have achieved 100% level of birth and death registration. Apart from Delhi, this list includes Arunachal Pradesh, Manipur, Uttarakhand, Chandigarh and Puducherry. The level of registration of births/ deaths in Delhi over a period of time is indicated in the above statement. It is evident from the above

statement that the level of registration in Delhi was more than hundred percent mainly because of the existence of good health infrastructure as well as responsive registration mechanism at ground level. Due to this fact, the people from other areas outside Delhi also come to avail better health facilities/ treatment in Delhi's hospitals and consequently the births and deaths pertaining to non-residents of Delhi also occurred here and then the registrations of such vital events are done in Delhi in accordance with provisions of the RBD Act, 1969 to register the vital event as per the place of occurrence of the event. Evidently, this factor plays a key role in having the number of registered births and deaths higher than the SRS estimates.

MEASURES FOR IMPROVEMENT OF CIVIL REGISTRATION SYSTEM

- (i) A Citizen's Charter for Registration of Births & Deaths has been implemented and the issuance of Births & Deaths certificates has been covered under e-Service Level Agreement (SLA) to facilitate the public. The citizen charter indicates brief procedure and guidelines to be followed by the citizens of Delhi and Local Bodies for registration of Births & Deaths. This may prove helpful to improve the Civil Registration System in Delhi. All registration centers have to display the informative boards regarding various provisions under e-SLA pertains to issuance of Birth & Death certificate to guide the public properly.
- (ii) The Chief Registrar's Office is operating a website 'www.des.delhigovt.nic.in' giving details of registration procedure, area wise registration centre, administrative machinery for redressal of grievances etc. Provision has also been made for the general public to give their suggestions for the improvement of the system through e-mail.
- (iii) All the local bodies have computerized their operations resulting in improvement in the quality of service rendered to the public. All major hospitals, government/ private have been provided the facility of online reporting of events and this has sped up the process of reporting/ registration of events. Further, online facility to take the birth/ death certificates directly from website is also being provided by all local bodies i.e. NDMC, North, East and South DMC and DCB.
- (iv) Total 3,90,517 birth certificates and 1,06,392 death certificates were issued under section 12 of RBD Act, 1969 while 6,62,311 birth certificates and 1,27,609 death certificates were issued under section 17 of RBD Act, 1969 during the year 2019 in Delhi.

- (v) No penalties have been imposed under section 23 of RBD Act, 1969 on defaulting institution, registrar and the individuals for non-registration, non reporting and for negligence to register any birth/ death in the year 2019.
- (vi) Inspection of Registration centers: Inspections of registration centers, Zonal offices and major hospitals were done from time to time by the officers/ officials of Head quarter of concerned local bodies to examine the working of registration centers and ascertain the difficulties of public in registration and obtaining birth and death certificates.
- (vii) One day training programme on Medical Certification of Cause of Death & assigning of ICD-10 Coding was organized on 04.12.2019. Around 180 participants attended the training from government and private hospitals dealing in the concerned fields (Medical Officer and Coder/ MRO engaged with the ICD-10 coding) and Asstt. Chief Registrar/ Registrar/ Sub-Registrar of local bodies.
- (viii) Supply of Registration stationery: The office of Chief Registrar (B&D) provides registration stationary i.e. Birth reporting forms, Death reporting forms, Still birth reporting forms, MCCD forms etc. free of cost to the local bodies, Govt. and Private hospitals, Nursing homes and Maternity Centers.
- (ix) NGOs and other voluntary organizations were involved in the propagation of benefits of registration of births/ deaths and identification of unregistered cases if any, in slum areas. The Office of Chief Registrar (Births & Deaths) has cooperated in the mission of Plan India by providing the birth certificate of children in difficult circumstances with the help of zonal offices Municipal Corporation.
- (x) As per the initiative of office of RGI, GOI; some new tables based on statistical information reflected in birth & death reporting forms have been added w.e.f. the Annual Report, 2013. These statistical tables (like birth weight of child at the time of birth, age of mother at the time of marriage, the gap in years between marriage and different orders of the children etc.) have been presented in the section 5 of the report.

Monitoring and Coordination

A high level Interdepartmental Co-ordination Committee (IDCC) has been constituted in Delhi under the Chairmanship of Pr. Secretary (Plg.) and Chief Registrar (B&D) as Member Secretary. This committee consists of representatives from Directorate of Health Services, Education, Police and local bodies etc. to sort out the matters relating to the subject without much delay. This platform is expected to ensure close coordination and effective monitoring of the implementation of the provisions of the Act. The latest IDCC

meeting was held on 04.09.2014 under the Chairmanship of Pr. Secretary (Plg.), GNCTD to discuss further measures to make the Civil Registration System people friendly.

Sex Ratio in Delhi

The main source for bringing out this vital indicator is Population Census data and CRS data. The population data gives universal sex ratio for every 10 years. This data suffers from two major limitations viz. time lag and does not give the realistic situation as it gets affected by the in and out migrations. Therefore, the records of registration of births & deaths become the primary source for compilation of sex ratio at State/ District etc. levels. The CRS data will provide short term and very effective inputs on this burning problem so that remedial measures can be initiated without loss of time.

The sex ratio is expressed as the number of female births to thousand male births for a particular period of time says one year/ month etc. As per the International practice, sex ratio is worked out as number of male births per 100 female births. As per the International standard, sex ratio around 105 males per 100 females is considered as an acceptable level.

Sex Ratio as per Population Census

The universal sex ratio of Delhi as per population census for all age groups taken together was 821 females per 1000 males in 2001 and it has become 868 females per 1000 males as per final data of census - 2011. Child sex ratio (0-6 years) of Delhi went up marginally from 868 (as per census 2001) to 871 (as per census 2011). As can be seen from statement 1.3, at both points of time the figures of Delhi were below the All India level. The district-wise scenario for the children of 0-6 years varies in different districts.

Statement 1.3: Sex ratio of Delhi/All India as per population Census Data

| Sl. No. | Item | Census year | |
|----------|--|-------------|-------------|
| A | District wise sex ratio (children of 0-6 years) | 2001 | 2011 |
| | South | 888 | 885 |
| | South West | 846 | 845 |
| | North West | 857 | 865 |
| | North | 886 | 873 |
| | Central | 903 | 905 |
| | New Delhi | 898 | 894 |

Sex Ratio as per CRS Data

The data available from Civil Registration System indicates that sex ratio at birth (refer statement 1.4) was 809 females per 1000 males in the year 2001 and it is improving every year and was 848 in the year 2007. However, during 2008 the sex ratio was reversed showing 1004 females per 1000 males which was unprecedented and may be due to implementation of LADLI SCHEME w.e.f. 01.01.2008. Further, the sex ratio at birth has marginally decreased from 924 females per 1000 males in the year 2018 to 920 during the year 2019.

MONTHLY MONITORING OF THE SEX RATIO OF INSTITUTIONAL BIRTH

The national conference of Chief Registrars Births & Deaths, held in 2003 unanimously recommended for the monitoring of sex ratio on a regular basis at the State/UT level taking into account the alarming decline in the sex ratio which has become a cause of concern for the policy makers and administrators. In compliance of the mandate of the Chief Registrar Conference, Delhi has started the monthly monitoring of sex ratio of institutional births w.e.f. the year 2004.

The data is collected on monthly basis from 50 major hospitals which account for 57.64% of total registered births in the year 2019 in Delhi. This helps to review the sex ratio at the highest level in the shortest possible time without waiting for the yearly indicators. The sex ratio of institutional births on the basis of these 50 hospitals comes out to 913 in the year 2019.

Efforts will be made to increase the coverage of health institutions under the monthly monitoring system to make this exercise meaningful and truly representative of the ground reality.

COMPARISON OF SEX-RATIO AMONG STATES/ UTs

The data pertaining to the scenario of sex ratio in different States/ UTs, given by office of R.G.I. may be seen in Statement 1.5. However, at the time of comparing it should also be kept in mind that Level of Registration is not uniform in all States/ UTs.

The analysis of institutional vital events reflects that the proportion of institutional births to total births is higher than the proportion of institutional deaths to total deaths.

During the year 2019, the proportion of institutional births to total births has touched the highest level of approx. 91%.

Registration of Vital Events by Local body

The responsibility for registration of all types of vital events lies with the local bodies in Delhi. The majority of the registrations were done in North Delhi Municipal Corporation followed by South Delhi Municipal Corporation, New Delhi Municipal Council, East Delhi Municipal Corporation, and Delhi Cantonment Board. The details about proportion of registered births and deaths in different local bodies during the year 2019 are reflected in statement 2.5.

The analysis of trend of proportion of institutional births in local bodies reveals that the NDMC had almost 100% births in the institutions/ hospitals where as this proportion in

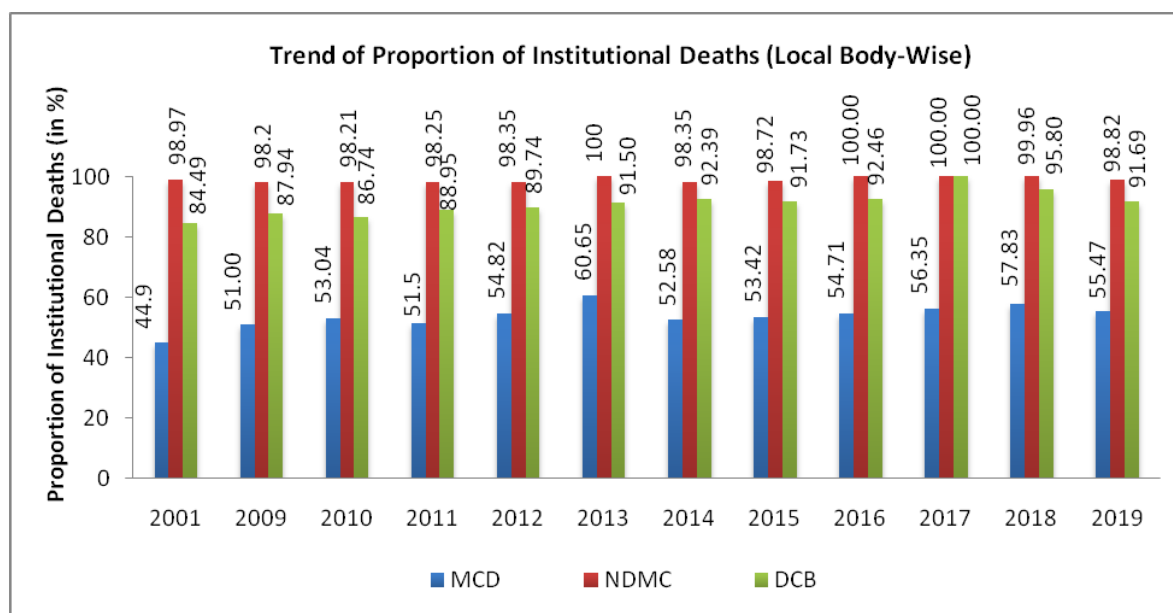

case of MCD mostly lies in between 55 to 90%. However, individual analysis among three corporations reflect that during 2019, the East Delhi Municipal Corporation had 92.25% institutional births out of total births that occurred in East DMC which is better than North DMC (91.79% institutional births of its total births) and South DMC (approx. 86% institutional births of its total births).

It is observed that in Delhi, the proportion of institutional births is increasing every year and during 2019 it was the highest i.e. approx. 91% in consequence of the positive impact of different government programmes to encourage institutional delivery for safe maternal and child health. Still, there is strong need to take further measures to achieve the milestone of cent-percent institutional delivery.

MEDICALLY CERTIFIED CAUSE OF DEATH:

As per the Act, it is mandatory to provide medically certified cause of death for each institutional death by the doctor who attended the patient / deceased. During the year 2019, total 95860 deaths were reported by the hospitals/ nursing homes and registered in local bodies. These deaths have been provided medically certified cause of death as per ICD-10 coding of WHO. The medically certified cause-wise broad classification of these deaths is given in statement 2.10.

CRS vis-à-vis SRS Results

Any attempt aimed at making a comparison between SRS estimates and CRS results strictly speaking is not tenable as they follow different approaches to determine the basic parameters. However they can be taken as two alternatives to complement/ supplement each other. SRS estimates which are based on sampling approach serves as a short term tool in the management of health scenario as CRS results are not available at short notice. More over SRS covers events pertaining to domicile population where as CRS is inclusive of vital events of migratory population as events are registered as per place of occurrence under RBD Act. That is the reason why CRS results are usually on the higher side when compared to that of SRS. Further, if CRS results could be brought about in shortest possible time frame it can supplement the SRS in the times to come. Therefore the following statements are included to serve academic purpose at present.

SECTION THREE

PROFILE OF BIRTHS REGISTRATION

In this section various aspects of birth registrations, that had taken place during 2019 under Civil Registration System, are analyzed with special reference to the number of events registered across years, male- female composition, matters relating to birth order and literacy, age of the mother at the time of child birth, the type of medical attention available in case of domiciliary events, local body-wise registration of events etc. The level of birth registration was found to be more than 100% consistently over a period of time thereby indicating the sound health of Civil Registration System in Delhi.

Birth Registration under Civil Registration System

During 2019, a total of 365868 birth events were registered by all the local bodies taken together. Out of them, 190527(52.08%) were male, 175267(47.90%) were female and 74 (0.02%) were others.

Statement 3.1: Total Number of Births registered under CRS sex-wise

| *2019 | 190527 | 52.08 | 175267 | 47.90 | 365868 | 1002 | 920 |

* Out of total registered births, 74 births have Sex “Others” during the year 2019. Sex “others” includes transgender/ ambiguous/ not stated.

It may be observed from the statement 3.1 that the composition of male and female births in the total births was consistently 50 - 55% and 45 - 50% respectively across the years.

The sex ratio at birth has marginally decreased from 924 females per thousand males during 2018 to 920 in 2019. Further analysis of institutional and non-institutional births indicates that sex ratio in respect of institutional births decreased from 916 (in the year 2018) to 912 in 2019, whereas in domiciliary births sex ratio increased from 1000 in 2018 to 1010 in 2019.

*Out of total registered institutional births, 74 births have sex "others" whereas in domiciliary births no case registered having sex "Others".

The exceptionally higher sex ratio (during 2008) can perhaps be attributed mainly to the implementation of the various welfare schemes of the girl child (including Ladli Scheme w.e.f. 01.01.2008). However, the sex ratio based on total registered births (including institutional and domiciliary) during 2019 has been slightly declined in comparison to the year 2018.

BIRTH RATE

One of the important indicators that emerge out of Civil Registration System is the Birth Rate. Statement number 3.2 provides the time series data from 2001-19. The birth rate during the period of the year 2001 to 2019 hovering between 18-22 per 1000 population. The graph plotting the birth rate for the said period clearly exhibits this fact.

DISTRIBUTION OF LIVEBIRTHS BY BIRTH ORDER

Birth order statistics are important indicators for measuring the progress and effectiveness of family welfare activities. Time series data on percentage distribution of births by birth order is given in statement 3.3.

Statement 3.3: Percentage Distribution of Births by Order of birth

| Year | Birth Order | | | |
|------|-------------|-------|-------|-----------|
| | 1 | 2 | 3 | 4 & above |
| 2001 | 40.94 | 27.33 | 11.17 | 20.56 |
| 2002 | 36.90 | 25.81 | 10.40 | 26.89 |
| 2003 | 44.53 | 33.80 | 12.88 | 8.79 |
| 2004 | 47.14 | 34.28 | 13.12 | 5.46 |
| 2005 | 50.59 | 32.42 | 12.45 | 4.54 |
| 2006 | 56.79 | 28.97 | 11.08 | 3.16 |
| 2007 | 58.98 | 27.47 | 9.79 | 3.76 |
| 2008 | 55.12 | 31.24 | 10.15 | 3.49 |
| 2009 | 53.39 | 32.81 | 11.01 | 2.79 |
| 2010 | 60.33 | 29.28 | 8.07 | 2.32 |
| 2011 | 56.37 | 32.39 | 8.80 | 2.44 |
| 2012 | 55.80 | 33.14 | 8.83 | 2.23 |
| 2013 | 61.19 | 29.21 | 7.69 | 1.91 |
| 2014 | 55.47 | 33.75 | 8.67 | 2.11 |
| 2015 | 62.78 | 32.57 | 3.93 | 0.72 |
| 2016 | 55.78 | 32.89 | 9.29 | 2.04 |
| 2017 | 54.48 | 34.24 | 9.32 | 1.96 |
| 2018 | 56.65 | 32.51 | 9.03 | 1.81 |
| 2019 | 55.90 | 33.00 | 9.22 | 1.88 |

It is obvious from above statement that the first order of births account for 55.90% of the total births registered during 2019. The proportion of first and second order of birth taken together accounted for 88.90% in the total registered birth of 2019. The share of births beyond third order was only 1.88%.

DISTRIBUTION OF LIVE BIRTHS BY AGE OF MOTHER

The age of the mother at the time of attainment of motherhood will have an influence on the overall health of the child and the safety of mother during the time of delivery. Attainment of motherhood below the age of 18 years is considered to be undesirable in the interest of mother as well as of the newly born child. Out of the total registered births during 2019 only 2.36% are from the mothers in the age group ≤ 19 years. The need of the hour is to undertake sustained campaign focused towards eligible couples in the age group of up to 18 years and living in slums, advising to avoid attainment of motherhood at such an early age.

Statement 3.4: Percentage Distribution of Births by age of Mother

| Year | Age Group of Mothers in Years | | | | |
|------|-------------------------------|-------|-------|-------|------------|
| | ≤ 19 | 20-24 | 25-29 | 30-34 | 35 & above |

| 2017 | 2.03 | 42.85 | 37.18 | 14.21 | 3.74 |
| 2018 | 2.09 | 39.23 | 39.20 | 15.11 | 4.37 |
| 2019 | 2.36 | 37.55 | 39.68 | 15.76 | 4.65 |

Statement 3.4 further reveals that 77.23% of births were given by the mothers in the age group of 20 - 29 years followed by 15.76% by the mothers in the age group of 30 - 34 years, while 4.65% of the births were by the mothers in the age group of 35 & above years.

TYPE OF MEDICAL ATTENTION RECEIVED AT DELIVERY

The type of medical attention received at the time of birth in case of domiciliary events is an important factor in controlling the level of infant mortality. Further, it will have a bearing on the quality of service rendered by health workers involved in the field.

Statement 3.5: Percentage Distribution of Births by type and medical attention

Statement 3.5 gives percentage wise distribution of live births by type of medical attention at the time of child birth. It may be seen from the above statement that medical institutions have accounted for more than seven eighths (91.15%) of the total births during 2019. Obviously, the share of institutional births has gone up continuously. It was only 62.11% in 2001. During 2019, the proportion of institutional births to total registered births has increased approximately 1% in comparison to year 2018. In the year 2019, total 333492 live births were occurred in the hospitals i.e. on an average 914 live births were occurred daily in the hospitals during 2019.

BIRTH EVENTS - LOCAL BODY WISE

Statement 3.6 reveals the distribution of birth events of 2019 among local bodies of Delhi. Out of the total births, 86.22% were registered in the MCD whereas NDMC accounted for 12.81%. The total registration under DCB constitutes only 0.97% of the total births. After the trifurcation of MCD, it has been observed that maximum (34.04%) births were registered in North DMC followed by South DMC (31.67%) and East DMC (20.51%). Further, break-up of registered birth events reveals that only 7.93% of the births were rural, whereas 92.07 % were urban.

BIRTHS BY BIRTH ORDER VIS-À-VIS LEVEL OF MOTHER'S EDUCATION

The data presented in statement 3.7 states that a specific trend has been seen in the level of education of the mother, and the birth order. It is evident from column No. 6 that proportion of birth under “Graduate and above” category is decreasing with the higher order of birth.

Further, it is observed that out of total births of fourth and higher birth order, in 28.07% cases the level of education of mother was 'primary but below matric' and in 17.44% cases, the mothers were illiterate. Obviously, in case of fourth and higher order of birth minimum proportion of births were in the category of mother having 'graduation or above qualification'.

REGARDING STILLBIRTHS

Of late, it is being observed that data / information which pertain to still births is not reported regularly by the hospitals / institutions to the concerned Registrar (births & deaths). The Office of Chief Registrar (B&D) has made a communication to sensitize the Medical Superintendents of the hospitals/institutions to report the vital events inclusive of still births within the stipulated period of 21 days to the concerned Registrar (B&D).

An effort has been made to present the data on still births; for the years 2015 to 2019 in the statement 3.9.

PROFILE

SECTION FOUR

PROFILE OF DEATHS REGISTRATION

This section reflects the information on different aspects of death registrations that had taken place during 2019 under Civil Registration System with special reference to the number of events registered across years, male- female composition, age at the time of death, medically certified causes of deaths, infant and maternal mortality rates, local body-wise registration of death events etc. The level of death registration was found to be more than 100% consistently over a period of time thereby indicating good status of Civil Registration System in Delhi.

Death Registration under Civil Registration System

During 2019, a total of 145284 deaths were registered by five local bodies. Out of total deaths, 89723 (61.76%) were male, 55527 (38.22%) were female and 34 (0.02%) were others. Sex ratio of deaths revealed that for every 1000 male deaths, 619 female deaths have occurred during 2019. On an average, 398 number of deaths were registered per day during 2019.

Medically Certified Cause of Deaths

Statement 4.9 provides MCCD data pertaining to institutional deaths as per coding of ICD-10. The ICD-10 is used to translate diagnosis and other health related problems from words to alphanumeric code and thereby facilitates the classification and analysis of data. This statement provides the status regarding major causes of deaths as per MCCD for institutional deaths during 2019. In this regard, more details are presented in Table D-11 of the section 5 of the report.

ANNEXURE

CONCEPTS & DEFINITIONS

Some important concepts used in this Annual Report are defined as follows:

1. **Birth**: “Birth” means live-birth or still birth.
2. **Live Birth**: “Live-Birth” means the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which after such expulsion or extraction, breathes or shows any other evidence of life, and each product of such birth is considered live-born.
3. **Still-Birth**: “Still-Birth” means foetal death where a product of conception has attained at least the prescribed period of gestation.
4. **Death**: “Death” means the permanent disappearance of all evidence of life at any time after live-birth has taken place.
5. **Foetal Death**: “Foetal Death” means absence of all evidence of life prior to the complete expulsion or extraction from its mother of a product of conception irrespective of the duration of pregnancy.
6. **Infant Death**: “Infant Death” means death of a child less than one year old.
7. **Level of Registration**: The level of registration, defined as the percentage of registered births/ deaths to the births/ deaths estimated through SRS, determines the performance of a State/ Union Territory with regard to functioning of Civil Registration System.

$$\text{Level of Registration (LOR)} = \frac{\text{Number of events registered during the year}}{\text{Number of estimated events for the year}} \times 100$$

$$\text{Number of estimated events for the year} = \text{Mid-year population} \times \text{SRS Rate}$$

8. **Mid-year Population**: “Mid- year population” means, population at the mid-point of the year, i.e. 1st July of the year provided by population projection of 2019.

$$9. \text{ Sex Ratio at Birth} = \frac{\text{No. of female births registered during the year}}{\text{No. of male births registered during the year}} \times 1000$$

Delayed Registered Birth events of more than one year have been duly deducted for arriving the sex ratio at birth.

9. **Birth Rate**: Birth rate acts as an index of the relative speed at which additions are being made to the population through child-birth. It is only a live birth that signifies an addition to the existing population, excluding still births.

The annual birth rate is defined as:

$$\text{Birth Rate} = \frac{\text{No. of Births in a year}}{\text{Mid-year Population}} \times 1000$$

10. **Death Rate:** The death rate for a given year tells us at what rate deaths have depleted the population over the course of the year.

The death rate, which measures the decrease in a population due to deaths, is perhaps the most widely used of any vital statistics rate because of its value as an index in numerous demographic & public health problems.

The Annual Death Rate is defined as :

$$\text{Death Rate} = \frac{\text{No. of Deaths in a Year}}{\text{Mid-year Population}} \times 1000$$

11. **Infant Mortality Rate:** Infant mortality rate serves as one of the best indices to the general “healthiness” of a society. It is similar to age-specific death rate for infants under 1 year of age.

The annual infant mortality rate is defined as :

$$\text{Infant Mortality Rate} = \frac{\text{No. of deaths under 1 year of age which occurred among the population}}{\text{No. of live births which occurred among the population}} \times 1000$$

12. **Maternal Death Rate:** Maternal death rate is defined as maternal deaths per thousand live births.

$$\text{Maternal Death Rate} = \frac{\text{No. of Maternal Deaths}}{\text{No. of live births}} \times 1000$$

13. **Neo Natal Mortality Rate:** The neo-natal mortality rate, like the infant mortality rate, is similar to an age specific rate. It is a rate used to measure the risk of death during the first month of life and is defined as:

$$\text{Neo-Natal Mortality Rate} = \frac{\text{No. of deaths of infants under the age of 1 month which occurred among the population}}{\text{No. of live births which occurred among the population}} \times 1000$$

14. **Post Natal Mortality Rate:** The post natal mortality rate, like the infant mortality rate, is similar to an age specific rate. It is a rate used to measure the risk of death during 28 days to 12 months of life and is defined as:

$$\text{Post-Natal Mortality Rate} = \frac{\text{No. of deaths of infants during the age of 28 days to 12 months which occurred among the population}}{\text{No. of live births which occurred among the population}} \times 1000$$
